Converse Cord Tires were designed by the manufacturer of Converse fabric tires to supply a tire that would stand up under the most trying road conditions and give unlimited service for the life of the tire. Fourteen months after the company conceived the idea of making a cord tire the first one was placed on the market, during which period a large amount of experimenting was done at the factory with the object of producing a tire that would do all the manufacturer desired. The result obtained is a tire constructed throughout of the best of material behind which is the maker's statement that it will make good any defect in workmanship or material regardless of mileage at any time

during the life of the tire.

The tire consists of eight layers of cords, impregnated with pure rubber, separated from each other by sections of pure rubber covered with a cushion stock, breaker strip and finally with a pure rubber cushion or tread absorbing the shocks of the road. The cord layers are placed at a 45-degree angle with relation to the bead or base of the tire. They are arranged in four groups placed at right angles to each other. Each group is two plies thick, the

individual cords of which do not cross each other, but run in the same direction. Where the four groups cross a heavy insulation of rubber is placed, so there is no contact.

It is stated that this construction eliminates the heating caused by the friction of the strands, as it obviates chafing.

Converse tires, it is claimed, have a balanced strength, due to their form of construction, which distributes the road strains over a great many strands instead of concentrating it on a few.

Manufactured by the Converse Rubber Shoe Co., Malden, Mass. Prices and literature on request.

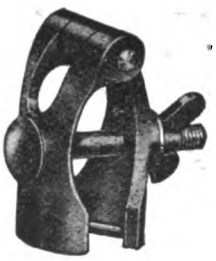
The Continental Radiator Stand was designed to overcome the difficulty experienced by repairers when soldering leaks in radiators and of spending considerable time in getting the radiator in the proper position for soldering.

The stand was designed to overcome this difficulty and turning in two different directions makes it possible to get any part to a level position. In placing the radiator in any desired position the outer frame revolves with the axis of rotation in one direction, while the inner frame revolves with its axis of rotation in the opposite direction and either frame can be firmly locked in position. As the stand is portable, it is not necessary to take the radiator from the stand when testing for leaks.

The clamps, which are furnished, are covered on the ends with rubber, so as not to injure the most highly finished radiator, and the supports are made of wood for the same reason. There are no obstructions whatever in the mechanic's way, and the radiator can be instantly turned to any desired position and firmly locked. The stand is constructed of structural steel and, although light, is amply strong enough to handle the heaviest truck radiator. The Continental radiator stand is 34 inches high and occupies a floor space of 24 by 26 inches.

Manufactured by the Continental Auto Parts Co., Columbus, Ind. Price, $25 f. o. b. Shipping weight, 150 pounds.

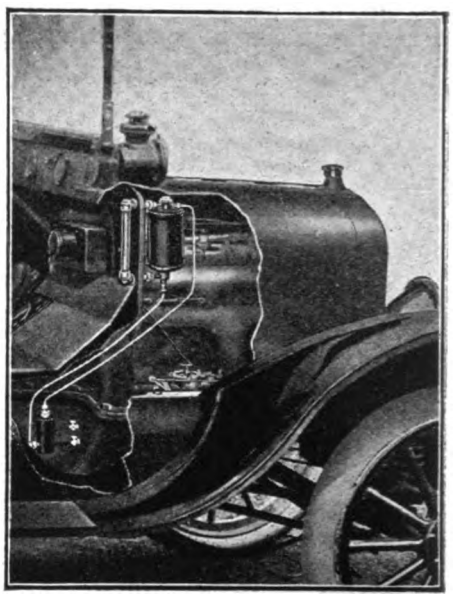
The Valve Spring Compressor is designed for the quick removal and insertion of the fastening key on Buick cage valves and is used for compressing the spring while the key is either removed or inserted. The device consists of a cast base that sets on the work bench, having



a concave seat into which the base of the cage fits, and a hinged inverted cup-shaped handle with an opening in the center through which the valve stem is passed when the handle compresses the spring, exposing the key for easy removal.

Manufactured by the Osborne & Stephenson Manufacturing Co., Plainville, Conn. Price, $2.

The Fracto Visible Lubricator for Ford Cars consists of an auxiliary tank holding a quart and a half of lubricating oil, located on the dash under the hood, connected to a gauge glass on the front, showing at all times the amount of lubricant in the tank. An oil regulator which contains no moving parts to get out of order is located at the rear end of the crankcase,

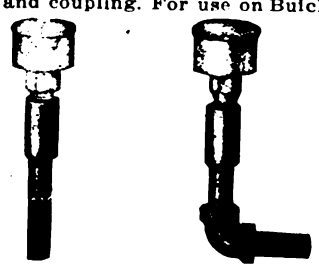


attached to the lower level petcock and connected to the auxiliary tank on the dash by two copper tubes.

The Fracto visible lubricator automatically feeds oil to the engine even at slowest speed and, it is stated, under all conditions. When oil gets below the correct level in the crankcase, an air vent is automatically opened, which allows oil to flow from the tank. When the correct level is reached the oil closes the vent, forming a vacuum in the tank. The level of the oil in the engine crankcase can easily be adjusted to suit the requirements of the engine, it is claimed. The auxiliary tank has a capacity sufficient for four days with one filling.

Manufactured by the Fracto Specialty Co., Inc., 161 Massachusetts Avenue, Boston, Mass. Price, $12.

Grease Cup Extension Pipes are designed to be used in inaccessible places about the car by being fitted to grease cups. They consist of a section of straight pipe and a coupling or two nipples, an elbow and coupling. For use on Buick cars,



there are two nipples and an L for the driving ring bearing between the battery and the transmission, while the straight nipple and coupling type was designed for the brake camshafts on the rear axle close to the axle flange.

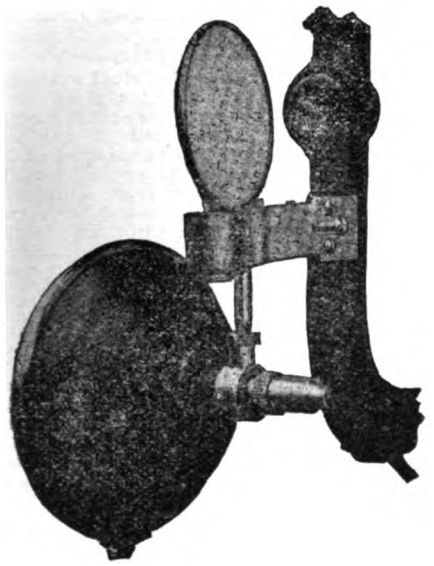
Manufactured by the Osborne & Stephenson Manufacturing Co., Plainville, Conn. Prices, 50 and 75 cents each, respectively.

Digitized by Google

"Fox" Spotlight

"SUNLIGHT AT NIGHT"

THE LIGHT WITH THE ADJUSTABLE BALL BEARINGS



The Fox Spotlight is constructed entirely of brass, heavily nickel plated and easily fulfills the legal requirements in many states. The mirrors are first nickeled and then silver plated, resulting in a continuous light of great efficiency. The Fox switch is very simple in construction, located conveniently to the hand of the operator and is fully protected against moisture and guaranteed to be sure in action under any normal use.

The lens is convex and of the best double strength glass, the special process of manufacture, it is claimed, insuring a perfect fitting lens, both weather and dust proof.

The three-point suspension clamp is rigid, free from vibration and fits any car. The Fox mirror is a convex diminishing form, with nickel plated rim. The Fox spotlight can be purchased either with or without mirrors, as desired.

The trouble reel can be attached under the cowl of the car, has black enamel finish, carries 12 feet of protected cord and when attached to the spotlight makes a trouble light that is capable of lighting any part of the engine or car.

A special model is manufactured for enclosed cars having brackets for attaching to the windshield and a special dashboard switch, so that the light can be turned off or on from the inside of the car.

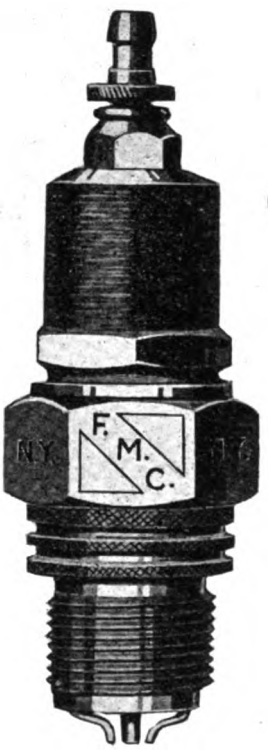
Manufactured by the Hardware Manufacturing Co., Seattle, Wash. Prices, model A with mirror for any car, $10; model B, without mirror, for any open car, $8.50; model C with mirror for any closed car, $10; model D, without mirror, for any enclosed car, $8.50.

The F. M. C. Mica Insulated Spark Plug is practically a hand made product, as each plug is assembled and set by hand, individually tested and inspected before leaving the factory.

Among the features claimed for this plug is that it is insulated with mica of the highest grade obtainable—ruby Brazilian—which insures thorough insulation under all conditions, making the plug practically indestructible, for mica will not break, chip or leak, it is stated.

The mica core insulation is made extra thick to insure durability. This mica core insulation covers the central electrode, which is conical in shape where it enters the body of the plug. The effect of this conical construction, it is claimed, is to make the plug leak proof, as compression in the cylinders tends to force the electrode upwards, making this part of the plug seat more tightly. The plug is in two parts and can easily be taken apart for cleaning with ordinary wrenches, or a wrench and vise. The construction of the plug is such as to make it practically soot proof, it is stated, as an unusually large chamber is provided in which considerable oil or carbon can accumulate without affecting the operation of the plug. The mica insulation at the top of the plug is composed of discs of mica fitting the core tightly compressed until mechanically they may be considered as a solid block of mica.

Knurls on the shell of the plug and a large radiating surface cause an even, rapid radiation of the heat, insuring cool operation and preventing preignition troubles. This plug is designed for all classes of trade where a quality plug is desired.

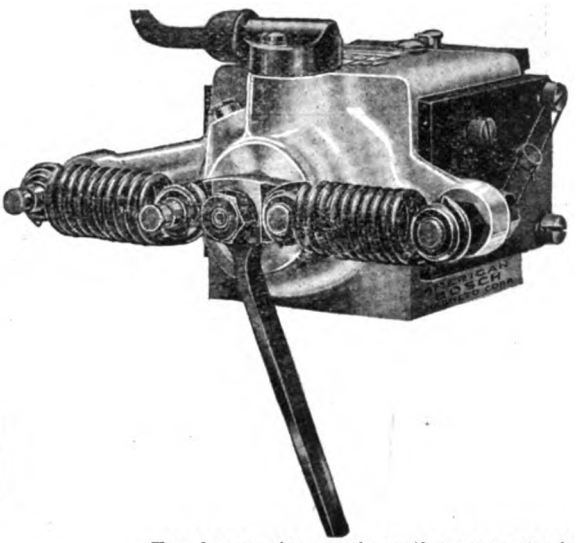


Manufactured by Ford Mica Co., Inc., 14 Christopher Street, New York, N. Y. Price $2 each.

AB-33 Ed. I American Bosch Magneto is a newly designed high-tension magneto for stationary engines using liquid fuel such as gasoline, kerosene, distillate, motor spirits, tops, etc., for fuel. Stationary engines require intense, thick sparks at the starting periods and the complete igniting of the various kinds of fuels used under comparatively high pressure. The type AB-33 Ed. I magneto is a complete ignition system in itself and requires no batteries, igniters or make-and-break apparatus to produce either the starting or running sparks. Its high-tension current is produced by transforming mechanical energy into electrical energy by rocking the armature, made up of many coils of wire, between the poles of a powerful magnet thus producing an inexhaustible high-tension electric current of great volume and penetrating power.

The construction of the AB-33 Ed. I magneto is typical of other Bosch products. The magneto frame is cast of aluminum and includes the driving end plate with arms for holding the studs of the trip lever springs. The pole shoes and drive shaft bearings are cast in the magneto frame. The rear end plate is of cast iron and acts not only as a bearing for the rear end of the armature, but also as a pole piece for the two magnets which are screwed both to the rear end plate and to the pole shoes of the magneto frame. The rear end plate carries the interrupter housing, inside of which is fastened the interrupter cam. The rear end plate also carries one oil cup with wick for lubricating the bearing.

The interrupter is of the standard Bosch type (anti-clockwise), the only difference being that the points are made of a special material (not platinum) and are marked on one face of the hex with the letter "F." No carbon brush is furnished with these interrupters because the circuit is completed through the carbon grounding brush provided in the top of the magneto frame. This magneto is made with plain bearings and because of this the complete armature is not interchangeable with other types.



For large size engines the magneto is equipped with a trip lever for starting. Smaller engines may have this trip lever supplied at an extra cost.

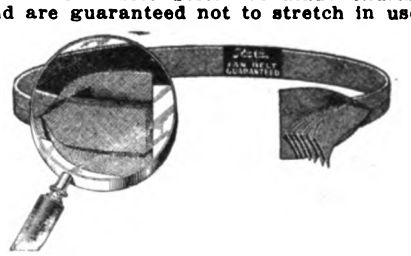
The magnets on this type of magneto are permanent flat magnets, which are screwed both to the rear end plate and to the pole shoes. The screws which hold the magnets to the pole shoes and rear end plate have holes through their heads for the wire seals.

The grounding brush consists of a brass holder in which is placed a carbon brush and spring. This brush is found at the rear end of the top face of the magneto frame just in front of the oil cup.

Manufactured by the American Bosch Magneto Corporation, Springfield, Mass. Prices on application.

Rie Nie Fabric Fan Belts are built up from several layers of fabric impregnated with rubber and wrapped in a strip of fabric of the same material that covers the strips, holding them together and providing an oval edge that is claimed not to fray when rubbing against the flange of the driven pulley.

Rie Nie fabric belts are made endless and are guaranteed not to stretch in use,



as the stretching qualities of the fabric have been removed during the manufacturing process. Belts are manufactured for practically all cars from 1911 to 1919 inclusive for the Fordson and Moline tractor and are listed by stock numbers.

Manufactured by the Durkee-Atwood Co., Minneapolis, Cleveland and Toronto, Can. Prices according to stock numbers on request.

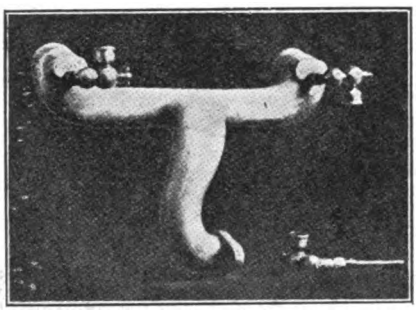
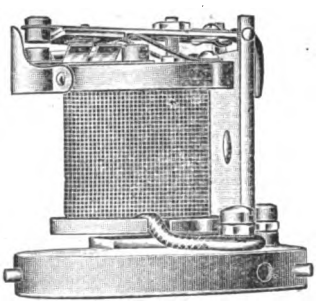
The King Priming Device for Ford Cars consists of two priming cups, threaded and inserted in ⅛-inch openings in the elbows of the intake manifold. A tube extends from the end of the petcock into the intake manifold, conducting the gasoline into the valve chamber of the engine, allowing the engine to be started more quickly than is ordinarily possible. The cups can be inverted after the engine has



been primed, shutting the valves and preventing the entrance of dust and dirt into the cups. The priming cocks are made of brass, either polished or nickel plated.

Manufactured by W. C. King, 911 Sargent Street, Litchfield, Ill. Prices on request.

Reverse Current Cut-Out for Automobile Lighting Plants is a device which is designed to automatically close the charg-



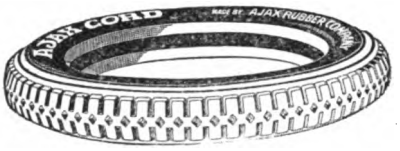
ing circuit, throwing the battery into the line, when the generator pressure has reached a specified voltage, generally one volt higher than the normal battery voltage; secondly, to automatically break the charging circuit, throwing the battery out of the line when the generator pressure has dropped to normal battery voltage, thus allowing a flow of current into the battery from the generator at such times as the generator voltage exceeds the bat-

tery voltage, and preventing at all times a flow of current from the battery through the generator.

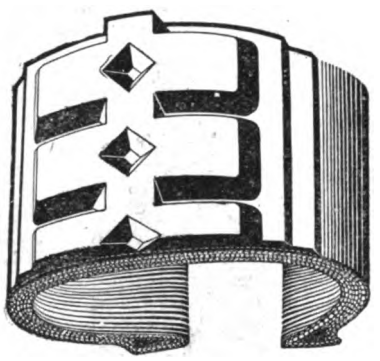
These instruments are furnished to work on voltages ranging between six and 32 and are made in one style known as type 2000, with a removable steel cover.

Manufactured by Briggs & Stratton Co., Milwaukee, Wis. Prices in quantity lots on application.

Ajax Cleated Tread Cord Tires are the result of many successful years of manufacturing and experimenting by the manufacturer in the making of fabric tires.



They embody great strength in the carcass, which is made of Sea Island cotton, covered with layer after layer of cotton cords, impregnated with rubber criss-crossed, to give strength, and are covered by a special tread having longitudinal

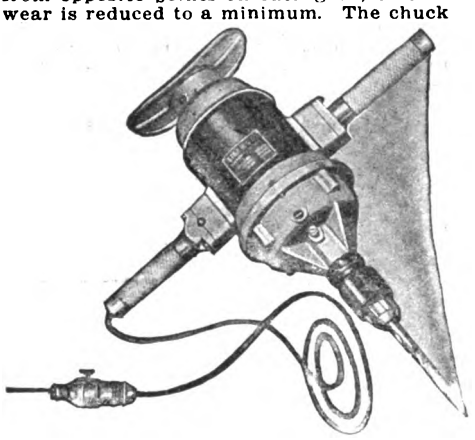


strips and cross cleats. This form of tread is peculiar to Ajax cord tires and is claimed to increase the traction, adding to its strength and increasing its wear-resisting qualities.

Manufactured by the Ajax Rubber Co., Inc., 218-222 W. 57th Street, New York. Prices on request.

Stow Heavy Drills are designed especially to withstand severe service in garage and service stations. The motor armature is mounted in heavy duty bronze bearings with a ball thrust bearing on the end of the spindle to take care of the end thrust. Specially treated steel gears connect the motor to the drill spindle. All gears are encased in a grease filled housing, insuring long life and low upkeep.

All parts of the drill are perfectly balanced, it is stated, making the drill especially easy to handle. The gearing is of the planetary type and is well adapted to this class of work. With this system of gearing power is transmitted equally from opposite points on each gear, so that wear is reduced to a minimum. The chuck



is of the well known Jacobs make, easily operated, holding the drills firm, yet is easily opened when changing drills.

It is stated that this tool will drill hard wood up to ¾ inch and metal up to ½ inch, while the capacity of the chuck is ½ inch. Speed is approximately 500 revolutions a minute, while the maximum horsepower given by the motor is one-fourth. The motor is wound for 110 or 220 volts direct current or 60-cycle alternating current and Universal as desired.

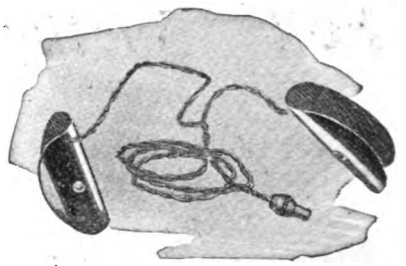
Manufactured by the Stow Manufacturing Co., Inc., Binghamton, N. Y. Prices on request.

The Rose Auto Grease Gun is adapted for light oils and some grades of hard grease, but is easily filled with hard grease by removing the nozzle on the end. The grease gun measures 1¼ inches outside diameter and 12½ inches over all. It

is stated that using either the curved or tapered nozzle, it is possible to pack a universal joint completely full of grease without waste. Weight, 1¼ pounds.

Manufactured by J. H. Haney & Co., Hastings, Neb. Price, $1.80.

The Globe Hand Warmers consist of two electrical heating pads attached to the steering wheel by screws. The heaters



are connected to the electrical system of the car by two wires and a plug, fitting a socket on the dash, or they may be fitted to a socket located at any convenient point handy to the operator. The hand warmers are easily applied by anyone in a few minutes time, are nickel plated and highly polished and are attractive looking on the steering wheel. The inside of the warmers are lined with green baize cloth to prevent the steering wheel from becoming scratched or marred. The Globe hand warmers consume very little current. It is stated that the 6-8 volt type consumes only three amperes an hour when in continuous use.

Packed in individual boxes, 10 boxes to the case, for jobbers and dealers. In ordering specify the voltage of car, otherwise 6-8 volt type will be supplied.

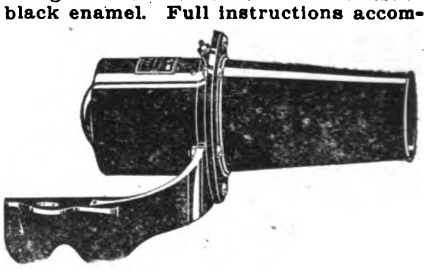
Manufactured by the Globe Machine & Stamping Co., 1200-50 West 76th Street, Cleveland, O. Price, $3.50 a pair.

"Red Devil" No. 80 Automobile Tire Iron and Jack Handle is especially designed for quick handling of tires, is light in weight and constructed from forged steel. The tire iron and jack handle has a

smooth finish so that no harm can come to a tire on which it is used. May also be used as a jack handle or for other purposes where a leverage is desired. Made in ¾ inch steel, 12 inches long and 16 inches long.

Manufactured by Smith & Hemenway Co., Inc., 180 Colt Street, Irvington, N. J. Prices on request.

The Klaxon No. 5 Motor Driven Horn for Ford Cars is designed for cars factory equipped with self starters and electric lights. The horn is easily attached to the original horn bracket and is finished in black enamel. Full instructions accom-



pany each motor driven horn, so that its attaching to the car is easily done.

Manufactured by the Klaxon Co., Newark, N. J. Price on request.

Digitized by Google

The Hempy-Cooper Motor Tester should prove very attractive to the garage man who wishes to maintain service of the highest efficiency and realizes what a saving it means in money and time both to himself and patrons to be able to positively diagnose his customer's motor trouble in a few minutes without even running the motor.

In using the Hempy-Cooper tester, all spark plugs are removed and the tester is screwed into spark plug opening. After a complete test of No. 1 cylinder the operation is repeated in each succeeding cylinder until the whole motor has been tested. All tests on each cylinder are made without changing the position of the tester. The different methods of procedure to test compression, piston rings, valves, piston slap, wrist pins, connecting rods and main bearings are all very simple.

For example, to test for piston slap: Turn the motor 30 degrees past top center so that connecting rod will be at an angle, then work plunger up and down with a short stroke; if the piston is loose you will hear a clattering noise as the piston moves from one wall to the other. However, if the trouble is not a piston slap it is a matter of only a few minutes before one of the other equally easy tests locates the trouble positively.

The test for compression loss serves as an illustration of the simplicity with which the different tests are made. Push

the tester handle down and fasten hook in opening. Turn the motor two complete revolutions by hand. The gauge will indicate the number of pounds compression in cylinder.

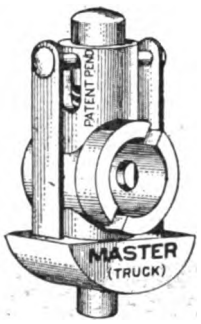
Or in case of the valve test, turn the motor until piston is up with the valves closed. Push tester handle down and a leaky intake valve will blow compression out through carburetor or through intake manifold to the cylinder that is on suction stroke, and then out through spark plug opening. Leaky exhaust valve compression will blow out through muffler or through the spark plug hole in the cylinder that is on exhaust stroke.

The tester is simple in the extreme, consisting mainly of an ordinary plunger pump with a hollow plunger to allow the compression to register on the attached gauge. An instrument with so few movable parts is practically immune to wear and should prove very durable.

Distributed by the Fairbanks Co., New York City. Price complete, $18, including fittings for ½-inch standard, ⅞-inch S. A. E. and metric threads.

The "Master" Governor for Ford Trucks was designed for commercially used Ford cars and trucks and tractors, insuring positive, unfailing control of Ford engine speed without impairing or altering the engine's efficiency.

The governor consists of a specially constructed timer brush of the wipe contact type, fastened to the camshaft in the regular manner, but has, in addition, a weight attached by two side straps to a cross pin in the brush contact and a guide fitting the hub of the brush carrier and the camshaft. When the speed of the engine reaches 1400 turns a minute the brush contact is broken by the weight



drawing the brush away from the contacts of the timer case and cutting out the ignition of the engine; when the speed of the engine falls back to normal the weight allows the contact brush to remake the contact with the points of the case, due to spring action within the brush carrier and the engine speed again picks up.

It is stated that drivers cannot tamper with this governor, alter it, or effect a change in its operation. At 1400 revolutions a minute the Ford engine develops its rated horsepower (20-22½).

Manufactured by the Master Products Co., Detroit, Mich. Price, $5.

Rie Nie Fabric Back Patch is as its name implies a patch for repairing punctures in automobile tubes and other articles of rubber, reinforced by a fabric backing that greatly strengthens the final patch and makes a more perfect job.

The manufacturer states that Rie Nie patches will not leak and resist high air pressure, the fabric backing insuring strength and durability. The patch is applied without the use of heat and as the

A PERMANENT REPAIR—NOT A MAKESHIFT.
Will Outlast the Usefulness of the Article

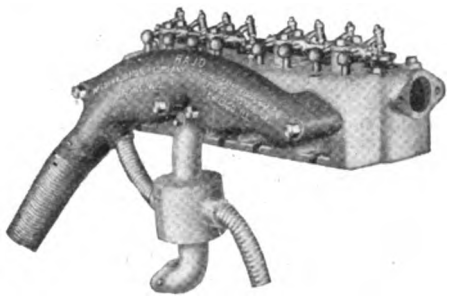
work of applying the patch is done entirely with the hands, tools are unnecessary. Rie Nie patches are equally effective in repairing rubber goods of all kinds and is said to make a permanent, lasting repair that is not affected by heat or cold and is nearly equal to work done by the vulcanizing process.

Manufactured by the Durkee-Atwood Co., Minneapolis, Cleveland and Detroit. Prices on application.

The "Rajo" Model 30 Valve-in-Head for Ford Cars is a replacement proposition by which the Ford engine can be converted into an overhead valve type of engine without great expense. The device consists of a special separable head fitted

with overhead valves, operated by long push rods passing through the regular guides to the tappets of the engine. Special manifolds for the intake and exhaust are provided and a heating device for the inlet manifold, connected to the exhaust manifold by flexible tubing. The separable head is cast in one piece of highest grade cylinder iron, while the exhaust manifold is constructed with a by-pass and pipe that carries hot fumes to a jacket surrounding the intake manifold and heating the gas before it reaches the combustion chambers of the engine.

It is stated by the manufacturer that the Rajo valve-in-head assures complete combustion, reduces carbon accumulation to a minimum, increases the mileage per gallon of gasoline to an average between

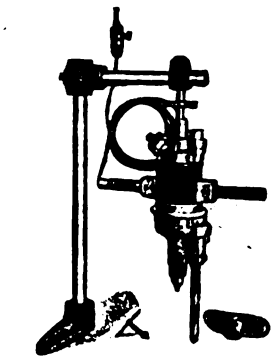


25 and 30 miles, at the same time allowing quicker acceleration and better power on hills.

The Rajo model 30 is fully guaranteed by the manufacturer against defects and workmanship for a period of one year from date of purchase. Fifteen days trial is allowed and if not satisfactory the purchase price will be refunded. The Rajo cooling system provides for ample water circulation around all combustion chambers and valves, eliminating all possibility of overheating. Special heads for Ford racing models are also supplied.

Sold by Trindl Sales Corporation, 57-61 East 24th Street, Chicago, Ill. Prices on request.

Stow Heavy Duty Two-Spindle Drill is designed for heavy work in and about the service station. By means of the two spindles, drills from 1/16-inch to ¾-inch can be easily used and a greater drilling efficiency secured. The drill is fitted with a heavy duty type motor, having extra heavy bearings, enclosed in a grease tight case with all gears running in a bath of lubricant. All gears are made from specially heat-treated steel, which guarantees long life. The No. 1 or center spindle is fitted with a Jacobs chuck taking S. S. drills 0 to ½ inch at a speed of 450 revo-



lutions a minute. No. 2, or the offset spindle, is fitted with a Morse taper socket and takes M. T. drills up to one inch, at a speed of 225 revolutions a minute. This tool is adapted to small shops where only one tool of this kind is desired. It is capable of drilling hard wood up to 1⅛ inches and metal up to one inch.

The capacity of the No. 1 Jacobs chuck is ½ inch, Morse taper socket, No. 2 taking drills up to 29/32 inch. The motor is wound for 110 and 220 volts direct current or 60 cycles alternating current and Universal as desired. Speed approximately, direct current, 450 and 225, alternating current and Universal, 500 and 250 revolutions per minute.

Manufactured by Stow Manufacturing Co., Inc., Binghamton, N. Y. Prices on request.

Hudson (One-Piece) Slip-In Auxiliary Radius Rod for Ford Cars consists of a wishbone or radius rod support for the Ford. It is fastened to the perch rod ends

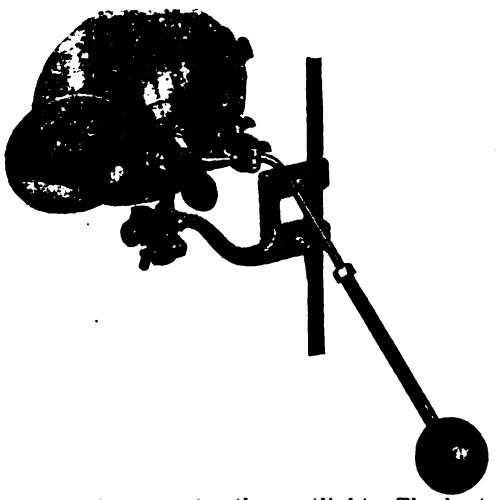
under the front axle and slips over the forked end of the radius rod by means of a socket joint, strengthening the radius rod and helping to prevent the radius rod from buckling.

The Slip-in auxiliary radius rod is made of the best of material, built especially for the purpose for which it is used and once in place becomes a permanent part of the car.

Manufactured by the Hudson Motor Specialties Co., Real Estate Trust Building, Philadelphia. Price, $2.50.

The Jiffy Spotter is an attachment for the spotlight whereby the spotlight is easily controlled from within a few inches of the steering wheel. The device is applicable to any spotlight and increases the control of the spotlight many fold. The device is adjustable and when not in use may be moved forward out of the way of the operator.

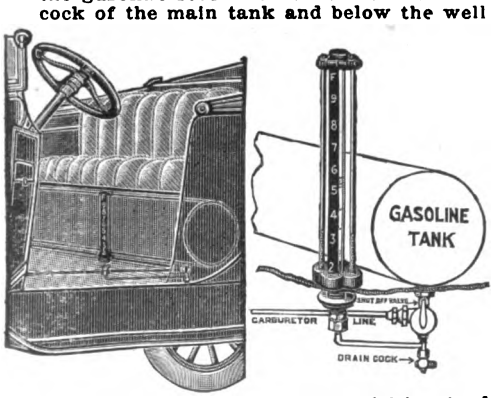
It consists of an extension that is adjustable, having a ball end by which the



operator operates the spotlight. The best of materials enter into the construction of the Jiffy Spotter and it is easily attached in a few moments.

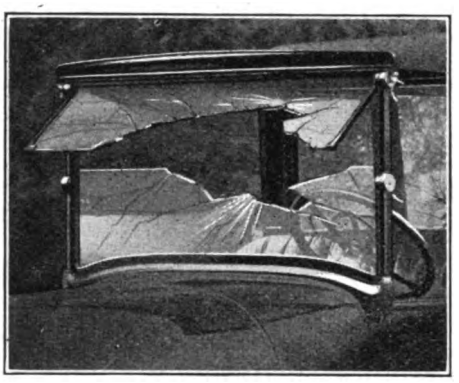
Manufactured by the Detroit Auto Accessories Co., Inc., 1616 N. Robey Street, Chicago. Price, $2.50. Sold under a money back guarantee.

The Baer-Glauber Gasoline Gauge for Ford Cars is a small gauge device that is attached by a short length of tubing to the gasoline feed line above the drain-out cock of the main tank and below the well of the tank. The gauge is located below the edge of the front seat cushion in a vertical position and shows at a glance the amount of gasoline in the tank. The gauge is a glass tube, containing a red ball which rises and falls according to the amount of gasoline and shows by means of figures on the tubing the amount of gasoline contained in the tank. The device is fastened to the floor of the car and may be fitted in a few minutes by anyone handy with tools.



Manufactured by the Baer-Glauber Co., 6523 Euclid Avenue, Cleveland, O. Price, $3.

Ultra Glass has two sheets of fine plate glass with a layer of pyroxylin compound between, welded together under great heat

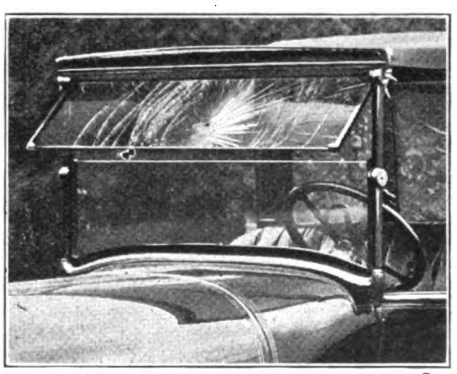


and pressure into one resilient, impenetrable, non-scattering unit. It is absolutely clear and undistinguishable in appearance from the finest brilliant plate glass the maker states.

If struck a heavy blow the layers of glass may develop fine hair line fracture, but each particle of glass will be firmly held to the resilient layer of the pyroxylin compound. The sheet of Ultra Glass will be found a unit with a surface as smooth to the touch as before the injury.

This feature makes Ultra Glass desirable wherever there is danger of personal injury resulting from broken glass, for Ultra Glass cannot splinter and fly about. It will not break apart, leaving jagged edges. The resilient layer of pyroxylin compound not only keeps the glass from scattering under a blow, but it strengthens and reinforces it. Blows which would break ordinary glass frequently have no effect on Ultra Glass.

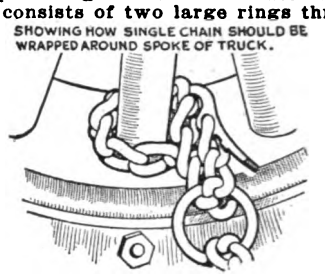
Its value for windshields and windows for motor vehicles and aircraft, for railroad cars and street cars, is self-evident. It is equally well adapted for goggles for motorists, aviators and mechanics, and for



many special uses, such as show cases, glass doors and machinery guards. For special purposes where a lighter gage of glass is desired it is made up with only a single layer of glass. In this form it is marketed under the name of Non-Skatterable Glass.

Made by the Glass Founders Corporation, Milltown, N. J., which is prepared to supply it to dealers cut to appropriate sizes and shapes.

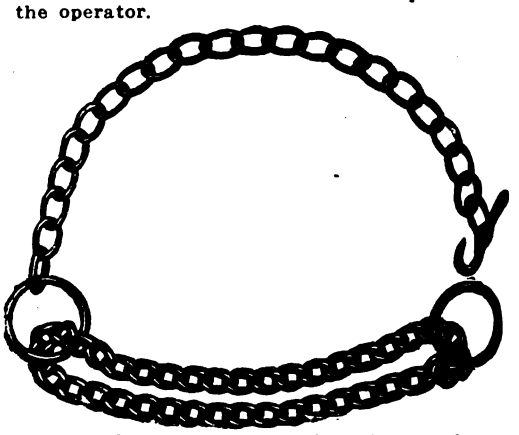
Herman Truck Traction Tire Chains for the motor truck embody a new fastening principle and a new traction feature. The chain consists of two large rings through



which is run an endless cross chain forming two strands across the tire. The fastening chain is attached to one of the rings by a permanent fastening and attaches to the opposite ring by a hook fastening of a patented design.

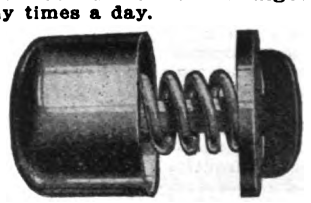
The chief feature of the traction chain is the double cross chain, as most traction chains depend on a single cross chain for traction purposes. The chain for fastening the cross chain to the wheel is of ample size to fit almost any size rim, and is attached by simply passing the fastening chain around the spoke of the wheel and passing the hook end through the large ring, drawing the chain up tightly and catching the hook in the fastening chain.

The cross chains are made of the best of material obtainable for the purpose and are easily attached and detached with a small amount of effort on the part of the operator.



Manufactured by the Utility Accessories Corporation, 16 West 61st Street, New York. Prices from $7.50 to $26, according to size of tire.

Lambert License Plate Holder is a patented device by which the license plate is held in place by a spring tension. The device is made of the best of steel, nickel plated or black finish as desired. Easily attached or removed in a few seconds. Especially useful among garages or salesrooms where numbers are changed often or many times a day.



The device consists of a steel rod, having a wing attached at one end, a washer fitting against the wing and a spring on the rod held in place by a suitable cover. To use the device the wing is inserted through the slot in the license plate and the bracket on the car. The cap is depressed, forcing the wing through the slots against the spring tension. Turning the cap one-quarter turn to the left or right fastens the holder. Two are required for each plate, four for the two plates.

Manufactured by the Lambert Manufacturing Co., Highland Building, Pittsburgh, Pa. Price, $1 per set of four.

Digitized by Google

Marathon Fabric and Cord Tires are claimed to offer as a special feature that the same tough wear-resisting stock that is used in the tread is extended down over the side walls to the beads. This construction prevents the chafing and scuffing off of the side walls when the tire is driven over rough, rutty or frozen roads. Consequently, sand and water do not get into the carcass. The cords are impregnated with pure rubber several times, so that each cord is thickly cushioned. It is stated that there is no internal friction to loosen the plies or create heat, because no single strand or cord can touch another, all cords being heavily imbedded in live rubber.

The casing is cured on an internal air bag instead of an iron core. By this process the cord carcass, after being expanded and cured, is in the same condition that it will be in when mounted on a rim, inflated for service, the cords being free from tension. It is stated that this is why Marathon cord tires will not stone bruise, as the carcass will flex to the utmost, but the cords will not break. It is claimed that the same high-grade construction is used in the manufacture of Marathon fabric tires as in cord. The tread stock is extended down over the side walls and is white instead of black.

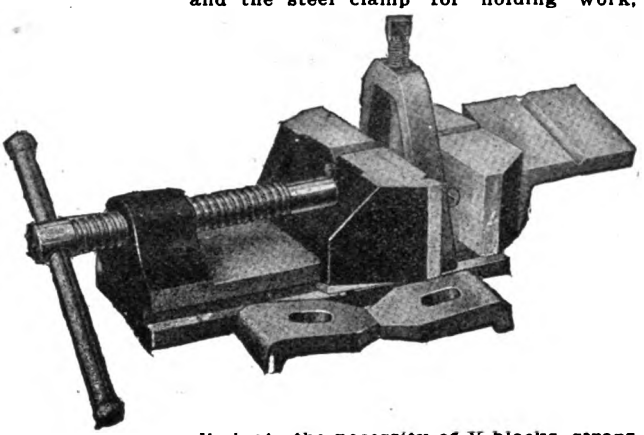
Manufactured by the Marathon Tire & Rubber Co., Cuyahoga Falls, O. Prices on request.

The "Basline" Autowline consists of a quarter inch yellow strand power steel wire rope 20 feet in length, with patented snaffle hooks on each end and two manilla slings especially constructed for towing automobiles or trucks. These slings are recommended to be always used in attaching the "Basline" Autowline, as they prevent the marring of the painted surface and also the fraying or chafing of the wire strands of the cable. One end of the "Basline" Autowline is attached to the rear axle of the towing car and the other end to the front axle of the damaged car. The snaffle hooks will hold under all conditions, it is stated. After using the Autowline may be coiled by rolling along on the ground as a hoop, this preventing kinks. It rolls up in a flat spiral and readily fits under the rear seat.

Manufactured by Broderick & Bascom Rope Co., St. Louis, Mo. Prices on request.

The G-S Combination Vise combines the vise, V blocks and angle plates in one device that may be used for a number of operations in the service station, and will prove a time saver wherever used.

The vise is accurately machined and is heavily built to afford ample strength and durability. The base is one solid casting and has two ⅝-inch slots cut in the bottom. The sliding jaw is quickly operated by a heavy square thread screw, set in the center of the jaw, keeping the jaw square by preventing wear on the bearings and giving the vise additional gripping power. The V's cut across the top of the jaws and the steel clamp for holding work,



eliminate the necessity of V blocks, straps and bolts. Work is set up and removed quickly by this method of holding. The V's cut on the face of the sliding jaw hold the work square with the face and in a rigid position. This feature is very handy in setting up duplicate parts, which is difficult where blocks are used for the purpose.

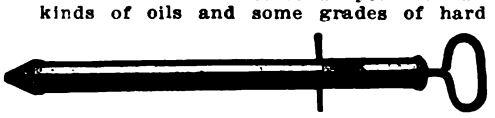
The steel plates forming the face of the jaws are case hardened, making it next to impossible to mar the V's when work is placed in them, while the adjustable angle plate can be quickly set to any degree and is held rigidly in position by tightening one nut.

The overhanging jaws are an essential feature of the G-S vise, as machinists have proved that there is a great variety of work which cannot be held by any other manner than by using overhanging jaws.

A strong feature of the G-S vise is that no time is lost in setting up the vise for different sizes of work or duplicate parts, as levers, cams and double handles are not used in its construction. The G-S vise is especially adapted for use on the drill press, milling machine, planer, etc. Each vise is provided with two special straps for fastening to the bench. Made in two sizes, No. 1 and No. 2.

Manufactured by the Germanow-Simon Machine Works, Rochester, N. Y. Price, No. 1, $35; No. 2, $50, f. o. b.

The Rose Shop Grease Gun is made of heavy steel with a projecting arm at each side of the cylinder to afford easy operation. It is stated it is adapted for all kinds of oils and some grades of hard

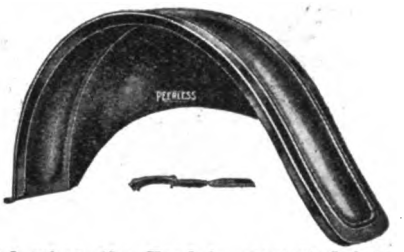


greases, and it may be filled easily with hard grease on the removal of the nozzle. It is furnished with either a curved or cone shaped nozzle, the latter having many improvements over a curved type previously manufactured by this company, as it will fit all openings up to and including the largest diameter of the nozzle, preventing the grease from backing out around the nozzle as the gun is discharged. It is especially adapted for drawing grease and oils from gearsets, differential housings, etc., as it will inject and suck out gasoline and dirt.

The pump measures 1½ inches outside diameter and is 24½ inches long; weight, 2½ pounds.

Manufactured by the J. H. Haney & Co., Hastings, Neb. Price, each, $3.50.

The "Peerless" Commercial Fenders for Ford Trucks are manufactured in three types, from heavy gauge steel, finished with two coats black japan baked on, to match the front fenders of the Ford car or truck. No. 1 is a crown fender, to be



used when the Ford is converted into a commercial car. A pair of these is necessary, as the fenders which are furnished with the Ford chassis body cannot be put in place without interfering with the fender. No. 3 is adapted for all truck units and is especially serviceable on the

Ford one-ton worm drive truck. Two extra heavy irons, bolts and washers are furnished with each fender for attaching to the truck.

No. 4 fender is adapted for all truck units. Brackets are not required as the fender is bolted directly to the body,

through holes drilled in the skirt of the fender. One end of the fender is cut away, allowing it to fit up close to the body and to prevent the chain interfering.

Manufactured by the Corcoran Manufacturing Co., Cincinnati, O. Prices on Nos. 1, 3 and 4, $6 a pair.

The Romfort Style AA Valve Connection is designed for use with the Romfort Universal hose coupling, providing a valve

connection which, it is claimed, will not blow off when inflating tires. It is made of cast metal and is easily accessible for fitting with new rubber washers or supplying new springs and valve.

Sold by the Zinke Co., 1323-25 Michigan Avenue, Chicago, Ill. Price, $3.

Digitized by Google

The Ultimate Valve Spring Lifter consists of a curved steel bar, forked at the lower end, having holes drilled at the upper end equidistant, a slidable arm fitting the bar, and a handle for operating the

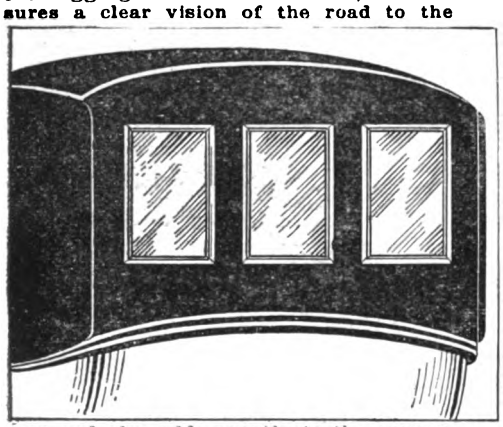
valve lifter having an elliptically shaped end with a hole drilled through one end of the ellipse. To operate the valve lifter the forked end is placed under the valve spring, the slidable arm resting upon the head of the valve and the elliptical end of the handle is fitted as closely as possible against the slide of the arm; a pin hanging conveniently from a chain is passed through the holes of the elliptical end and the bar, while a downward pressure of the arm compresses the spring, allowing the removal of the pin in the valve stem. Removing the pressure on the handle allows the spring to free itself and it is easily removed. To replace the spring reverse the operation. It is manufactured for all makes of cars.

The valve lifter may be adjusted by means of the pin, through holes in the lever and bar, for lifts from 4½ to seven inches. The throat opening is 4¾ inches, height 13 inches, width 6¾ inches.

Manufactured by H. D. Smith & Co., Plantsville, Conn. Prices on request.

"Ero" Aristocrat Glass Windows for Ford Cars are designed especially for the rear curtains of 1917, 1918 and 1919 Ford cars. They are made of the best grade, double-strength glass with highly polished, nickel plated frames, complete, ready to install.

The glass is heavy enough for strength and durability, yet light enough to avoid the sagging of the back curtain, and insures a clear vision of the road to the



rear and also adds greatly to the appearance of the car. It is claimed to be easily installed by the car owner in a few minutes without tools. Three windows constitute a set, packed in a neat carton.

Manufactured by the Ero Manufacturing Co., 700 West 22nd Street, Chicago, Ill. Price, per set, $3.

The Workrite Battery Hydrometer is designed for general use by motorists, service stations and garages. A rubber flange is provided at the base of the rubber bulb to protect the glass tube at the top, while a square flange is fitted at the bottom of the glass tube to minimize the chance of breakage. The center opening projects into the lower end of the tube, forming a cushion for the float and prevents the float from closing the opening. The float is always in plain view, there being no plug in the bottom to drop out, with the liabilty of spilling the acid and breaking the float. All rubber fittings are made of unusually high grade stock, insuring, it is stated, strong suction and long life.

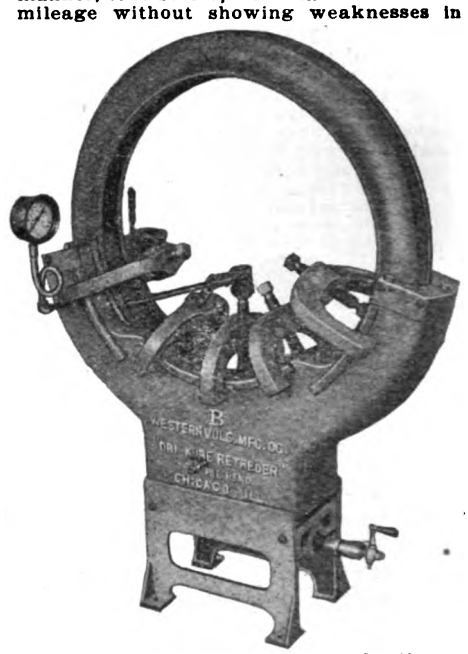
The WorkRite hydrometer is combined with a glass container of one quart capacity for the motorist's use, known as No. 1 outfit, and one of one gallon capacity for house lighting or service station plants. The containers are filled with distilled water. The flanged top of the bulb prevents the hydrometer from fully entering the container, preventing its breakage and keeping it in a position for instant use either for supplying distilled water to the battery cells or testing the electrolyte of the individual cells.

Manufactured by the Workrite Manufacturing Co., 5606 Euclid Avenue, Cleveland, O. Prices, No. 1 outfit, $1.50; $1.75 west of the Rockies; No. 2 outfit, $2.50; $2.75 west of the Rockies; No. 3 outfit for service stations, $2.50; $2.75 west of the Rockies.

The Dri-Kure Retreader is designed for the service station wishing to do satisfactory work without incurring the heavy expense of purchasing a retreading kettle. It is stated that the Dry-Kure retreader, owing to its construction, will do equally as good work as the retreading kettle at a fraction of its cost, and of a grade that is highly satisfactory to the customer, providing that the repairer uses care in the selection of the casings to be retreaded.

The construction of the Dry-Kure retreader differs from regular construction of this type of device in that wood blocks are used at each end of the steam chest, preventing the steam from acting upon the casing at these points and causing the casing to become porous or spongy.

Sand bags are used on the inside of the casing, applying the necessary pressure to the casing to keep its proper shape while being cured. Casings cured in this manner, it is stated, will run their allotted mileage without showing weaknesses in



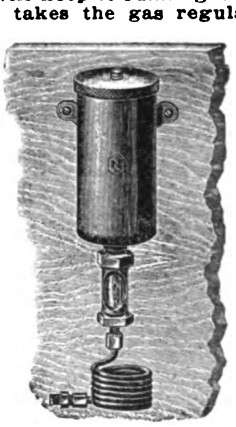
the side walls of the fabric or the tire.

Heat is supplied to the steam chest from a gas plate located in the base of the retreader, a suitable shut-off valve being provided, to which the flexible gas tube from the gas connection is attached.

The outfit is complete with a set of matrices, clamps, etc., for the various types of treads encountered in repair work, and it is stated that it is possible to finish a job complete without the need of patching or otherwise finishing the cure.

Manufactured by the Western Vulcanizer Manufacturing Co., 150 North Desplaines Street, Chicago, Ill. Prices on request.

The Engine Dash Primer for Ford Cars consists of a container having a capacity of ½ pint, that is fastened to the dash of the car. A sight feed glass and a coil of copper tubing connecting the priming device with the intake manifold by a ⅛" nipple threaded into the manifold. The sight feed is regulated by means of a needle valve on the dash. The primer is designed to prime the engine from the dash and will keep it running until warm or until it takes the gas regularly from

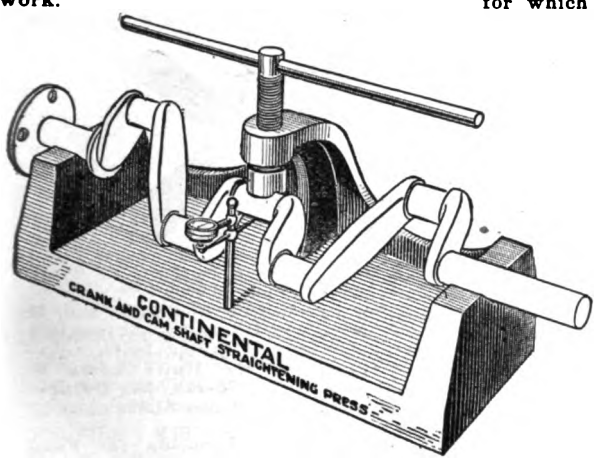


the carburetor. Primer may also be used for decarbonizing cylinders by feeding kerosene or water through intake manifold while engine is operating. The primer is easily attached in a few minutes time by simply drilling a hole in the intake manifold for the ⅛ inch standard pipe nipple and fastening the container to the dash.

Manufactured by A. Nelson Co., 2262 to 2722 Southport Avenue, Chicago, Ill. Prices, per hundred: Polished brass, $250; nickel plated, $275.

Digitized by Google

The Continental Crank and Cam Shaft Straightening Press was designed for service stations catering to the Ford trade. It comprises two tools in one, is light in weight and very accurate in its work.



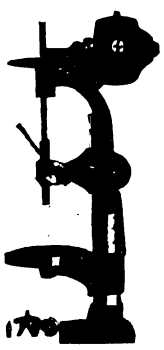
The device consists of a bench rest, made of heavy cast metal, the ends vertical, with V-shaped grooves for the shafts to rest in while straightening and a screw clamp in a vertical bracket, that fits the shafts at its center.

The device is equipped with a dial test indicator reading accurately to a thousandth of an inch.

Ford repairers are aware of the fact that Ford crank and cam shafts are bent very easily and by testing them during the course of repair, guess work on this score is eliminated.

Manufactured by the Continental Auto Parts Co., Knightstown, Ind. Price, $34 f. o. b.

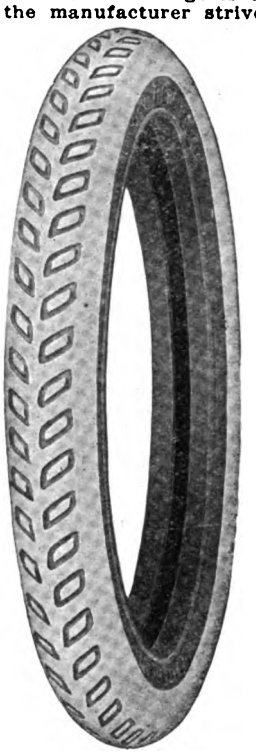
Stow Friction Driven Sensitive Drill is designed for light work requiring rapidity and accuracy and will drill holes up to one-half inch in diameter. The spindle is made of tool steel, is counterbalanced by a spring and provided with a ball thrust bearing. The weight and thrust of the friction disc is also carried on a ball bearing. The table of the drill is counterbalanced by a weight in the column, and can be swung around out of the way when desired. A finished boss is provided on base under the spindle, for convenience in centering long shafts, while an index line is provided on the column for setting ta-



ble central at any height. The friction disc drive permits quick adjustment of the speed, keeping the power in proper proportion to the size of the drill, avoiding drill breakage. The motor is of the simplest construction, having steel magnet cores, form-wound field coils, iron clad armature, tool steel shaft, commutator insulated throughout with mica and provided with self-feeding carbon brushes. The materials entering into the construction of this machine and the workmanship are claimed to be first class in every respect. The drill is complete with V block, cup and point centers.

Manufactured by Stow Manufacturing Co., Inc., Binghamton, N. Y. Prices on request.

Quaker Tires with T. T. T. Tread are the result of many years of careful experimenting on the part of the manufacturer and combine many desirable features. In building Quaker tires mileage is the aim for which the manufacturer strives, and



from the selection of the crude rubber, Sea Island cotton duck and other raw materials used, the employment of highly skilled workmen, to the final process of curing and shipping, this factor is first in mind.

Quaker tires are backed with a guarantee of unlimited mileage and should a defect occur in workmanship or material during any period of the life of the tire, an equitable adjustment will be made regardless of the number of miles the tire has been run.

Quaker tires are made of tempered rubber, an exclusive process controlled by the manufacturer, which gives hardness, toughness, flexibility, elasticity, resiliency and tensile strength, making possible the broad gauge mileage guarantee. T. T. T. is the trade name given to the non-skid tread.

Manufactured by the Quaker City Rubber Co., Philadelphia, Pa. Prices on application.

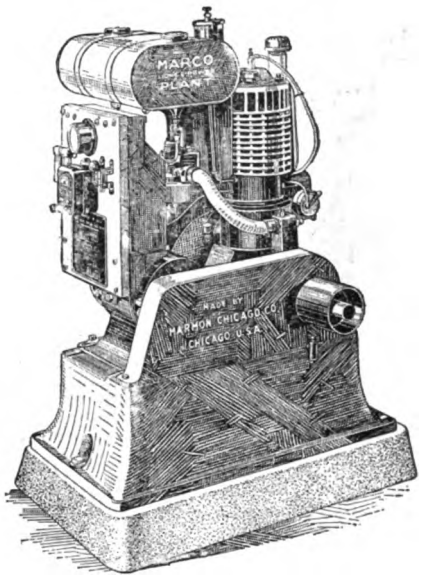
The Marco Light & Power Plant consists of a single-cylinder, air-cooled gasoline engine mounted on the same base with a Dyneto generator developing 1250 watts, with an overload capacity of 25 per cent.

The generator is actuated from the engine crankshaft sprocket by a silent chain, driving the generator at 2000 revolutions per minute, with a slow engine speed of 800 revolutions per minute. The engine is four horsepower, equipped with power pulley, enabling other light farm machinery to be belted to it for power purposes. Ignition is supplied by a Bosch magneto and spark plug of the high-tension type.

The Marco light plant is started by pressing a button, which closes the circuit from the storage batteries to the generator, changing the generator to a motor for starting the gas engine. After the engine picks up the motor automatically changes back to a generator, storing up current in the batteries for future or immediate use.

The outfit is supplied with a suitable panel equipped with switch, fuses, combination volt-ammeter and automatic control, which shuts off the engine when the batteries are filled or the current is not needed.

The storage batteries are the Prest-O-Lite pasted plate type—16-cell sealed glass jars, that may be placed in any convenient location. Batteries can be fur-



nished in different sizes ranging from 112 to 225 ampere-hour capacity.

The engine alone weighs 235 pounds and it is stated that five minutes work will disconnect it from the base by removing four bolts, when it can then be placed on skids and used for other power purposes.

Distributed by Marco Sales Co., Neenah, Wis. Prices on request.

The Romfort Universal Hose Coupling is designed for the garage or service station supplying air pressure to the trade. The couplings are made and provided with suitable bushings so as to be easily attached to hose of varying size and also metal or armored hose.

Extra bushings are supplied to fit the inside of the coupling, spreading the hose and making an air tight joint. The coupling consists of two sections, a threaded outer section of brass, provided with a hexagon nut, and a tapered inner end, having a hole drilled through the center for the passage of the air. The inner section consists of a metal shell having a smooth opening at the smaller end for the hose to pass through, and the opposite

end threaded for the nipple to screw into, with projections on the interior for the placing of the bushings when applying the coupling to small or armored hose.

It is stated that it is possible to use this coupling on either large or small hose, rubber or metal covered, and on both ends of air hose.

Sold by the Zinke Co., 1323-25 Michigan Avenue, Chicago, Ill. Price, $1.25.

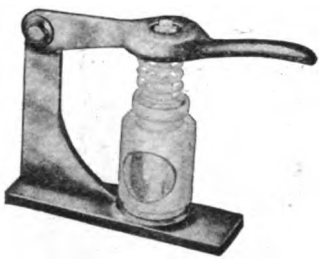
The Buick Valve Cage Lifter is a device for removing cages from Buick engines, consisting of a hinged casting, having a bolt and winged nut, which tightens the clamp after it is fitted to the valve cage. Removal is facilitated by removing the rocker arm and using a steel rod resting on a block of wood located on the rocker arm bracket, one end of the bar being placed under the cage remover. Striking



the free end of the rod with a hammer loosens the cage, making possible its removal. In obstinate cases an application of kerosene oil around the edges of the cage will facilitate its loosening.

The device is made of the best of material, and is stated to be a time and labor saver in the removal of Buick valve cages.

Manufactured by the Osborne & Stephenson Manufacturing Co., Plainville, Conn. Price, $1.

Zapon Leather Cloth is a leather substitute fabric incorporated into a strong cloth backing, either a fine sateen, finely napped moleskin, sateen or drill cloth. The quality of the cloth backing and the grade of facing material determine the grade and price of the finished article.

Zapon cloth is stated to be the result of careful experimenting in the manufacture of leather substitute, covering a period of years, by men who have grown up with the industry, know what is required by the trade and how to supply it in such a form as to give universal satisfaction wherever sold.

The cloth backing is subjected to careful inspection at the mills where it is woven. The operation of coating the cloth at the factory is very carefully guarded by experts, as experience in leather cloth making is highly important. In the coating is claimed to lie the secret of Zapon's uniformity and durability. Using the specially woven fabrics as a foundation, the Zapon coating mixture is scientifically applied in thin, filmy layers, accurately

gauged to prevent variations in thickness. Many layers are applied, inseparably welded into a tough and attractive leather cloth that is said to resist wear to the last degree.

The test and safeguards surrounding the making of Zapon leather cloth are continued in embossing rooms, where the grain is put in by machines which exert a pressure of nearly a ton to the square inch. The embossing rolls and plates through which the product passes are heated to a temperature that gives exactness and permanence to the grain. Special finishes, shaded and two-toned effects, are produced by hand buffing.

Zapon leather cloth is used principally by motor car manufacturers in upholstering seats, cushions, etc., and also as a top covering for curtains. The principal grades manufactured and sold to the trade are: Muleskin, broncho, moroccoline, rando and 170 drill.

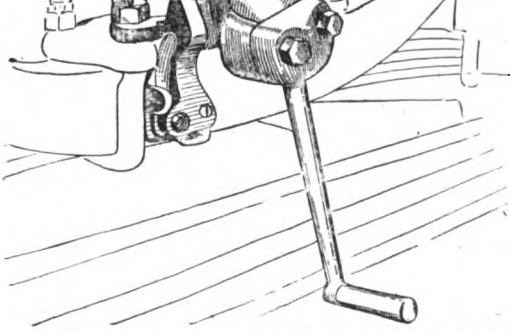
Manufactured by the Zapon Leather Cloth Co., 200 Fifth Avenue, corner 23rd Street, Fifth Avenue Building, New York. Prices and literature on request.

The Lock-Roll Clamp, a device for clamping rubber hose to metal water pipes in the cooling system of automobile engines, is made from a continuous band of steel that is light in weight and provides a unique fastening for the rubber hose. The method of fastening the clamp, as shown in the cut, is a patented feature, the ends of the band forming a scroll, through which is drilled a hole, threaded to receive a machine screw. Nuts are not required with this fastening, as the screw holds the clamp firmly in position. It is stated that the Wright-Martin Aeroplane

Co. used the Lock-Roll hose clamp for war work in its Hispano-Suiza aeroplane motor. The design of the Lock-Roll clamp is simple and it is claimed to be unusually strong and effective, a screw driver being all the tool that is required to set the clamp tightly in place.

Manufactured by the Federal Tin Co., Inc., Baltimore, Md. Prices on request.

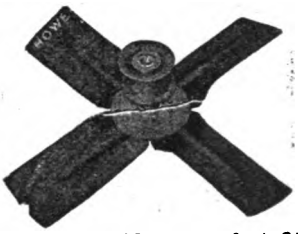
The Atlasta Safety Auto Device for the Ford Car consists of a notched cam, which is bolted to the starting crank of the Ford engine by two machine screws holding it securely in place. A spring actuated ratchet is attached by a bracket to one of the spring clips fitting the notches of the



cam. Its action, it is stated, is to prevent the engine from kicking back when started, especially if the spark lever is left in an advanced position. This is claimed to be of special advantage to lady drivers, as it is claimed that the device disconnects the starting crank from the crankshaft if a kick shouid occur, preventing the possibility of injury.

Manufactured by the Atlasta Auto Specialty Manufacturing Co., 2925-27 Locust Street, St. Louis, Mo. Price, prepaid, $2.50.

The Howe Fan for Ford Engines is a replacement proposition made entirely of heavy gauge steel stampings, except the bronze bushings, which are reamed to the proper size when assembled, all assembling being done by machinery, insuring

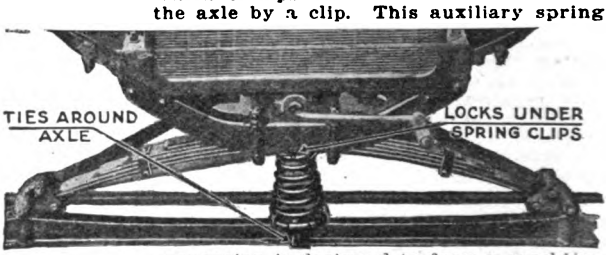


accuracy that provides a perfect fit when applied to the engine.

The Howe fan is light in weight and, it is stated, is easily driven by the engine, conserving power and saving belts.

Manufactured by the Howe Lamp & Manufacturing Co., 115-123 E. Ontario Street, Chicago, Ill. Price, $1.50.

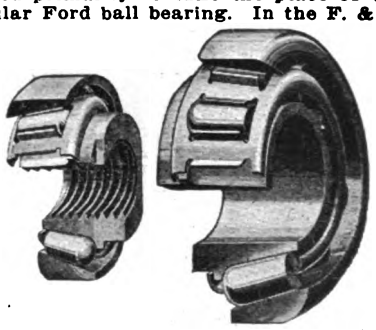
The ARG Auxiliary Spring for Ford Cars is stated to be manufactured from the highest grade of steel obtainable, has a special patented plate at the top which locks under the spring clips, and another which clamps on the bottom and ties to the axle by a clip. This auxiliary spring



suspension is designed to form a combination shock absorber and snubber and in addition to gradually reduce the rebound of the front spring so as to lessen the sudden jar. It is also claimed to prevent the front spring from breaking. The auxiliary spring and its attachments are quickly and easily applied as no holes are bored. The spring clips are simply removed and the special plates placed under the spring and on the axle.

Manufactured by the ARG Auxiliary Spring Co., 1908 Avenue B, Birmingham, Ala. Price, $5.

The F. & H. Roller Bearing for Ford and Chevrolet Cars is made of chrome steel throughout. This is a replacement bearing for the cars mentioned and is intended primarily to take the place of the regular Ford ball bearing. In the F. & R.



roller bearing the ring, cone and rollers are forged from high carbon chrome alloy steel bars, slightly oversize, then heat treated and hardened in oil, giving a uniform hardness throughout. The roller separator is a high carbon steel stamping so designed that the rollers are always held in their proper position, the bearing becoming self-aligning and easily adjustable. The separator is complete one piece and is heavy enough to retain its form, holding rollers in position on cone even when the outer bearing ring is moved.

Manufactured by F. H. and S. Co., 624 South Michigan Avenue, Chicago, Ill. Price, per set of four for two wheels, $10.

Uniform Signs for Grade Crossings

Pennsylvania Railroad Begins Installation in the States of Pennsylvania and New York

IN CONFORMITY to the campaign for a better and more uniform system of signs for safe guarding railroad grade crossings, the Pennsylvania railroad is to begin at once in the states of Pennsylvania and New York the installation of protective warning signs, which are designed to give advance notice of approach to crossings. The work of installation will be extended to other states, where preliminary warnings are not now in use, as soon as the necessary approval can be obtained from the state regulative authorities. The Board of Public Utility commissioners of New Jersey has taken up the application and approval for that commonwealth is now pending. Approval will also be requested in Delaware, Maryland, Virginia and elsewhere.

The new form of signal is devised especially to deal with the problem of inducing motorists to run at reasonable speed, and with their cars under full control, when nearing railroad crossings. This, it is expected, will be accomplished by the new "approach" signs, giving warning of crossings ahead in ample time to reduce to a safe speed.

A Standard Design.

The design which will be used is a standard adopted for such purpose by the American Railway association and consists of a metal disk 24 inches in diameter, having a black rim and divided into four quarters by a black cross on a white ground. The two upper quarters bear the letters "R. R." The sign will be mounted on a post of suitable height. The disc resembles that devised by the American Railway association as the standard "Stop" hand signal for watchmen at grade crossings where the volume of traffic requires such form of protection.

The new "approach" signs will be placed as nearly as practicable 300 feet from the crossings in both directions, and will be located on the vehicle, or right hand side of the highway. The exact point of location will be determined in each case with a view to giving the greatest visibility and prominence.

Method of Maintenance.

In the State of Pennsylvania an agreement has been reached between the Pennsylvania railroad, the State Public Service commissions and the State Highway commission, by which the railroad will furnish the signs and posts and the commissions will arrange for their erection and maintenance. In New York state, the erection of the signals is covered by a new act of Legislature under which, as in the case of the State of Pennsylvania, the railroad will furnish the signs and posts and the municipal or county authorities will be responsible for placing and maintaining them. When occasion arises the maintenance of way supervisors of the railroad will be assigned to the duty of explaining to the local authorities the purpose and utility of the new signs.

SECRETARY HUGO'S WARNING TO MOTORISTS.

The majority of the deplorable accidents can be avoided by automobilists exercising care at grade crossings.

Don't take chances.

Even if a crossing is protected by gates, flag man or bell, be sure you are safe.

The best safety device in the world is a careful driver.

Stop, look both ways, and listen.

Play safe.

A moment's caution may save your life.

Ultimately, it is intended by the American Railway association to extend the use of the "approach" signals, in uniform standard style, to all parts of the country and all railroads. The standard design was adopted for this purpose by a joint committee of the American Railway association and the National Association of Railway commissioners; and has been passed upon by a committee of the American Automobile association. This was done before the United States entered the war, but subsequent events interfered with the carrying out of the plan.

To Be Extended to All States.

With the approaching return of the railroads to private operation, it is now proposed to push the plan to execution in every state. When that is accomplished automobilists in all parts of the country will receive invariably the same warning of approach to a railroad crossing, with resulting great advantage from the viewpoint of safety and incentive to proper care. There will be no confusion over the use of different warnings in different states, as the standard "approach" sign will always mean the same thing.

Type of Railroad Warning Sign Being Placed at Grade Crossings.

A Safety First Message.

Cooperating with the New York Central railroad, Secretary of State Francis M. Hugo of New York has been promulgating a safety first message to 550,000 motorists in that state during the past few weeks, by inserting a card with each renewal of license, urging that all autoists exercise greater caution when approaching a grade crossing. This procedure was followed by Secretary Hugo several years ago and while there was no direct means of ascertaining how well motorists bore the warning in mind, Mr. Hugo is convinced that good resulted.

Still Great Need for Care.

That there is still great need for care on the part of motor car drivers in this respect is indicated from the fact that statistics show that each year more than 1500 persons are killed and 4000 injured on railroad crossings alone in the United States and that the number is steadily increasing.

There is, however, a crumb of comfort in the comparison made in the annual report of the National Highway Protective society, which shows that during 1919 92 persons were killed on highway railroad grade crossings in New York state, and 48 in New Jersey, as compared with 117 persons killed in New York and 54 in New Jersey in 1918, a slight decrease.

CATALOGUE, BROWN PYROMETERS.

The Brown Instrument Co., Philadelphia, maker of pyrometers, thermometers, tachometers and other indicating and recording instruments, has just issued catalogue No. 12, entitled "Brown Pyrometers," consisting of 88 pages, eight by 10½ inches, with a handsomely embossed cover design and elaborately illustrated with 159 copper plate half tones and diagrams. Without question this booklet contains more information in an available form on the subject of pyrometry than has ever before been covered in any catalogue, and the matter is presented in a practical way and couched in plain language so as to be perfectly intelligible even to the general reader.

The catalogue No. 12 also gives valuable information regarding resistance thermometers, recording thermometers, pressure gauges, draft gauges, tachometers, time and operation recorders and other instruments included in the Brown line.

Practical Book-Keeping System for Service Station, Garage and Vulcanizing Shop

By W. G. Harris, District Credit Manager, Atlanta, Ga., Goodyear Tire and Rubber Co.

FOR many months the Goodyear Tire & Rubber Co. has been in search of a simplified system of bookkeeping applicable to the average service station, garage and vulcanizing shop to enable the proporietors to know the exact financial condition of their business at any and all times. Many bookkeeping systems investigated have been far too elaborate for the average dealer who does not employ a bookkeeper and who must do his work himself, and are not detailed enough for the large establishment employing an expert bookkeeper.

The following system in which four books only are used, these being purchased at a small cost, may be kept in odd moments during the day or in a few minutes in the evening by any dealer. The only other book necessary is a check book.

Dealers interested in installing this simplified record system should write or get in touch with the credit man in the nearest Goodyear branch, who will be glad to assist in starting it without cost.

In any business, whether it is a garage, service station or vulcanizing shop, it is fundamentally important to the owner to know just where he stands financially, to know whether he is making money on a particular account and to keep a complete record of his stock and outstanding accounts.

A Genuine System.

Only through an adequate system of bookeeping can the dealer know the profits of his business. With the system described here he may with the least amount of labor open up an account with each department of his business; for example, the vulcanizing and repair department, and charge each department with everything going into it and credit it with all sales. In this way it is possible to know whether a particular department is being operated at a loss or at a profit, daily determining if any department is "sick' and enabling the dealer to make the requisite changes.

If a department is "sick" it should be analyzed just the same as a doctor diagnoses a patient's malady. This system will show what departments should be enlarged, the stock each department requires, the amount of stock on hand, the rapidity of turn-over as well as a complete evidence of the cost price of the business.

In this way the dealer can tell the minimum amount of stock that should be carried in each department. This will prevent over-buying or stock depletion and enable him to place an order the first of the month for requirements during that month.

In this system of bookkeeping there can be no trouble in adjusting insurance in case of fire. This is important. It will facilitate credit transactions and serve as a concrete evidence of good will. It makes possible a complete record of accounts with all firms from whom goods are purchased and permits the dealer at the end of the month to check up his statements and take his cash discount. Every dealer knows he cannot afford to lose his cash discount.

Daily Sales Book or Sales Journal.

The daily sales book is used for all charges and credits. This book is double-ruled with a column for credits and debits. The debit side of this book at the end of each day is entered or posted to the account called the "merchandise account" in the ledger, in order to obtain a daily record of sales. The credit side of the book will show all credits. These credits are transferred to the credit side of the same merchandise account in the ledger.

The Invoice Book.

The invoice book is used for all invoices or purchases made from other firms. Many times a man in the auto maintenance business finds himself at a disadvantage by not knowing how much stock he has received and when it arrived. Frequently, he has a dusty file or a pigeon hole in which he stores his invoices. Invoices are valuable papers and should be kept in a safe. These invoices should be pasted in the invoice book at the time the invoice or goods purchased is received.

Handling the Book.

After the invoice is pasted in the book the amount of the invoice is written in the debit column of the book. At the close of business each month the debit column, that is the column in which is listed the amounts owing to firms from whom the goods were purchased, is posted in the merchandise account of the ledger, referred to in the foregoing, and which will be explained later. In this way the dealer can tell the amount of goods purchased each month.

Credit memorandums are also posted in the invoice book and entered in the credit column to show the amount issued the dealer by merchants from whom goods are bought. This credit is to be posted in the merchandise account of the ledger on the credit side.

At the end of the month it is only necessary to add up the debit and credit sides of the invoice book and transfer the results to the merchandise account.

The invoice book is also used as a receiving book. As mentioned before these invoices have been entered in the invoice book so that when goods are received it is only necessary to take this book to the receiving room and check off goods as they come in. If the goods invoiced are not received a note of the shortage should be made on the invoice.

The Cash Book.

The third book is the cash book, which is used only for cash received and paid out. Cash receipts each day are posted to the debit side of the cash book. The credit side of the cash book will show the amount paid out either by check or in cash. The receipt side items should be posted to the credits of individual accounts and the payment side items to the debits of the individual accounts.

The Ledger.

The ledger is a book ruled with double entry columns in which all accounts are summarized, or in other words, a complete record made of the business done.

First write the name of the particular account at the top of each page, as for example, the stock account, interest and discount account, bills receivable, bills payable, freight and express, and any other accounts pertaining to the business. For example, a cash investment by an individual as we know, results in a charge to cash and a credit to the proprietor's account. If two partners enter into a partnership, each of them investing cash, the transaction results in two entries, each like the one for the individual entry. Two accounts are opened in the ledger, one for each member of said partnership.

The next account should be the merchandise account. This account is charged with all merchandise received and credited with all merchandise sold. An account should be opened with the bank with whom the firm is doing business. The expense account, showing all charges and all expense incurred in doing business, should be opened up. Another is the freight and express account, in which is charged all freight and express. Next, the interest and discount account, which is charged with all interest paid on borrowed money and credited with all cash discounts.

Bills Receivable.

Next is bills receivable account, which is charged with all notes received for merchandise and when a note is paid or disposed of is credited with the proceeds. A bill receivable is a note given by the customer to the dealer for goods bought and to be charged or for open accounts and should be posted to the credit side of the customer's account.

At the end of the year—or any given time—to determine what profit the firm has made, take stock of all merchandise on hand. The merchandise account shows the total purchases and sales, but not the value of the goods on hand and sold.

Profit and Loss.

Open up a profit and loss account. Post all open accounts, such as expense, freight and express, interest and discount, advertising, salesman's expenses and all salaries, to the debit side of this

Digitized by Google

account—that is all liabilities are to be posted to the debit side of the account. This account should be credited with the inventory and all other assets of the company. When the total of this account is made it should show the net gain in the business; that is, if all outstanding accounts owing the dealer are good.

The trial balance sheet will show all debit and credit balances. The total of the credits should agree with the total of the debits. Now we come to the balance sheet. This is ruled the same as the sheet used for the trial balance. The balance sheet will only show the assets and liabilities. Total up all accounts due—these are called accounts receivable—and enter on the sheet as such; total all accounts owing to others by the dealer and enter on sheet—these are called accounts payable—and enter as such; total fixture accounts and enter as such; transfer amount of inventory or merchandise account to this sheet; that is, all assets and liabilities are entered on this sheet and should give an insight to the business. Now the dealer is in a position to furnish a financial statement of his business.

LOADING TRUCKS ON CARS QUICKLY AT GMC PLANT.

Loading trucks on railroad cars for shipment is work that requires care and judgment. It must be quickly done and the machines must be protected against damage in transit, for they are subjected to a good deal of buffeting while on the cars. The shipments are made when possible in special cars with end doors, and the machines are driven up skids by their own power into the cars. But the car shortage is such that no railroad offer is refused. When coal cars and gondolas are only available then loading must be done far differently.

At the plant of the General Motors Truck Co., at Pontiac, Mich., the trucks are loaded on these type cars with a traveling crane, which can be positioned anywhere on the trucks and will lift a truck precisely where it is to be anchored. The work is well done and there is a great saving of time and no probability of damage from handling.

NEW STANDARD 2½-TON MODEL 70 TRUCK.

The Standard Motor Truck Co., Detroit, builder of Standard trucks, has now in production a new unit that has been designated Model 70, which is rated at 2½ tons load capacity. This machine is constructed of the standardized units used by this company for 10 years and is built to the well known Standard design, but will have the new Timken axle. Solid tires are listed as regular equipment, but pneumatic tires will be furnished to specification, the forward wheels having 36 by four inches shoes and the rear wheels 36 by seven-inch.

During the year 1918, automobile insurance claims amounting to $382,917 were paid by the companies insuring automobiles in Canada, as shown in the report of the superintendent of insurance, department of finance.

Uses for Old Rubber Inner Tubes

All motorists, and that term now includes many thousand farmers, accumulate damaged or unserviceable tire tubes. What to do with them is a question. But these old tubes can be used to give excellent and varied service.

If cut crosswise in widths from a quarter to a half inch, excellent rubber bands can be made. They may be used in numerous ways, as for holding the pages of note books, or for holding rubber tubes that have been repaired and are carried in the automobile. They may be used for holding the covers of tin boxes filled with small drills, cotter pins or nuts. They also serve for securing small bundles. Various other uses will suggest themselves to the owner. Being so much larger and heavier they are much more useful than the bands usually sold in stores.

Pieces of tubes may be cut with scissors and used for washers for various purposes. These washers will not last as long as washers made for general use, but considering what they are they give service for quite a while. Occasionally the nozzles on spraying outfits will not fit tight and a washer cut from an old tube will serve an emergency purpose and perhaps will save a special trip to town or to a store when work is pressing.

By starting at the end, cutting spirally round tube, one can get as long a strip of the rubber as one wants. These strips may be used to wind hammer and ax handles and iron lever handles on farm implements. Put on some rubber cement on the handles and then wind on the strips of rubber, being careful to keep them stretched fairly tight. There is a little trick to tucking the last end under the last "two times around," but after one handle has been wrapped the others are done easily. These wrapped handles do not blister the hands and the rubber wrapping will be found preferable to wrapping with adhesive tape.

Pieces from an old tube may be used for patching with a vulcanizer if the motorist does his own vulcanizing. The writer has used such patches for vulcanizing and found them very satisfactory. The purchased rubber is better, but in an emergency these pieces of tube may be used. Care should be taken, however, to trim the edges on a bevel so that after the patch has been cured the edges will not chafe the casing.

Have the surfaces clean on both sides. Wash with a cloth dipped in gasoline and then sandpaper them thoroughly. If one does not have sandpaper a fairly good job may be done with an ordinary file or a whetstone. These have given as good results as sandpaper or emery cloth.

By all means save the valve stems. Some times a valve stem is damaged and must be discarded. The valve stem out of an old tube can be inserted, cemented, then fastened by the wing nut and lock nut, and the tube will be as good as it ever was.

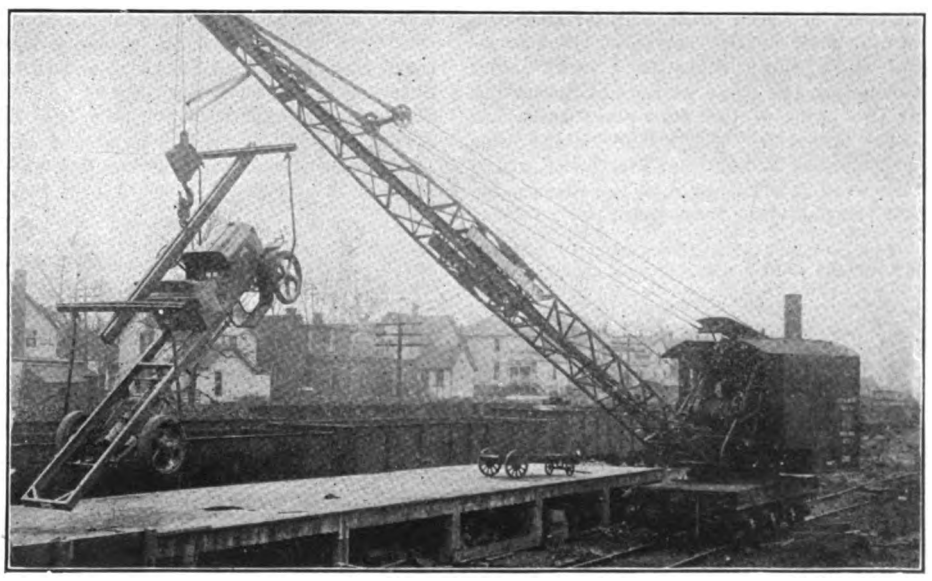
WILL BUILD ADDITION TO FEDERAL BEARING PLANT.

Work has been begun on a large addition to the plant of the Federal Bearings Co., Poughkeepsie, N. Y., which will be completed by the end of winter, and which is expected to increase the production more than 100 per cent. The company is to double its resources by increasing its capital from $1,000,000 to $2,000,000. The business of the company has developed very rapidly and continuance of this growth is believed will justify the expansion.

S. A. E. ANNUAL TRACTOR DINNER.

The annual dinner of the Society of Automotive Engineers during the Kansas City Tractor Show will take place this year at the Hotel Baltimore in that city the evening of Feb. 19.

There are 2,478,552 miles of public roads in the United States, yet only 12 per cent. of this total, or 299,135 miles, are improved with hard surfacing.



Loading Trucks on Coal Cars with a Railroad Steam Crane at the Plant of the General Motors Truck Co. at Pontiac, Mich.

Up-to-Date Methods of Vulcanization and Tire and Tube Suggestions

Compiled by the Goodyear Tire & Rubber Co.)

D. R. CAIN, instructor in the Goodyear tire repair school, says: "Treat air bags right and they will last long enough to make proportionate cost per repair very moderate. I have noticed in some shops that after a bag has been used it is thrown under the bench, deflated, until needed again. This flattens the bag out and later the lining is likely to crack where the crease comes. Air bags when not in use should be inflated sufficiently to round them out.

"After a bag has been used a number of times it becomes more or less elongated. When this occurs a semi-circular fabric pad should be employed to relieve the internal strain on the bag. This pad should be placed on top of the bag, i. e., against the tread."

When Repairs Loosen.

"What is the matter," asks a repair man, "when the new work pulls away from the tread? It looks just as good at first as any part of the tire—smooth and even—but after a couple of weeks running it comes loose from the old tire."

There might be almost as many causes of this trouble as there are operations in the process of making a repair. On this account it is difficult to diagnose the ailment at long range.

One likely explanation, however, is lack of "follow-up" pressure. If the equipment used is provided with clamps and wood blocks the original tightening of the clamps will not suffice throughout the period of vulcanizing. As the gum softens and begins to flow out the pressure naturally decreases and unless the clamps are tightened up, say every 15 minutes, the rubber will become spongy and the difficulty described might well be the result.

Of course if an air bag is used the necessary follow-up pressure is automatically supplied.

Insufficient buffing is another common cause of repairs loosening. Tread rubber is very tough and thorough buffing is essential to produce the fine pores on the surface of the stock that will allow the cement to work in and form a firm union. A power driven wire brush is much more effective for this purpose than sandpaper or a rasp.

If too much stock is used the excess will flow over the old tread where it is not buffed or cemented. The tread stock will begin to peel back along the edges, with the probability that in time the entire section will be loosened.

New Wrinkle in Tube Repairing.

From a repair man in California comes this suggestion:

"In repairing tubes we often have some with the puncture near the valve base or in the joint where the tube unites, and difficulty is experienced in making the patch cook down evenly all around. To overcome the trouble we use a small bag, such as a tobacco bag, with a little fine sand in it. By placing the bag on the tube over the patch and then the block on the bag, an even pressure on the tube is insured, the sand adjusting itself to the thickness all around."

This is really an excellent idea, but we think we know a method that represents an improvement over it. That is to use a rubber block instead of the wood block and sand bag. The rubber block should be about three-quarters of an inch thick. It may be cut out of an old solid tire or built up of layers of tread stock (G-100). A shallow tin box of the right size can be made to serve as a mold. Cure on the flat plate for about 40 minutes at 60 pounds steam pressure. When the block gets hard from repeated vulcanization it should be discarded.

Remember.

There are three vital elements in vulcanizing—time, pressure and heat. If anyone of these is wrong there will be something lacking in the finished job.

Sinking of Treads—What Causes It?

A middle western tire shop sends this query: "What is the cause of sinking of the tread at the intersection or between the diamonds, when exposed to heat? How can I stop it?"

Blisters—rising up and contracting—cause this condition through stretching the rubber. Remedy the blisters or air pockets and the problem is solved.

CAUSES OF IMPERFECT TREAD CURE IN THIRD CIRCLE MOLD.

Due to the fact that the construction of one-third circle retreaders is made variable in size of cavity, repair men have difficulty in using them. Where the casing size is found to be smaller than the actual size of the retreader it has resulted in many cases in a lump being formed on the tread surface of the casing at the point of the vulcanizer ends. In these instances where the casing size was slightly larger than the cavity which was used it resulted in a depression being formed at this point.

In figure 1 the cause of the bulge in the cure and the method of preventing it is clearly shown. It is merely a matter of proper application of the sand bags in the cavity. Figure 2 shows a cross section of the casing in the cavity with the sand bag properly fitted and the clamp in place. The bag in this illustration is in proper position to insure right tread line pressure. Figure 3 shows the pressure bar bent by continuous use, the dents in the bar resulting from the improper application of the sand bag, and they cause flat spots and an imperfect cure on the tread.

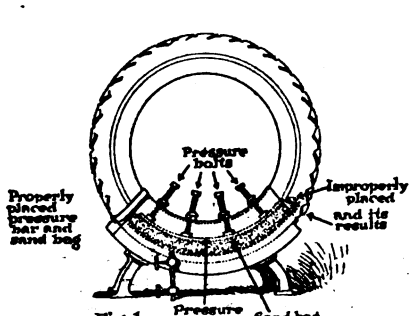

Fig 1

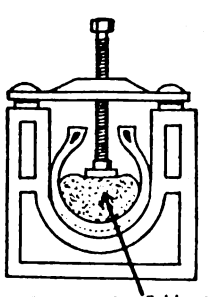

Fig. 2

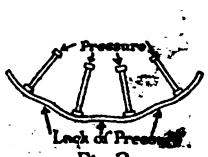

Fig. 3

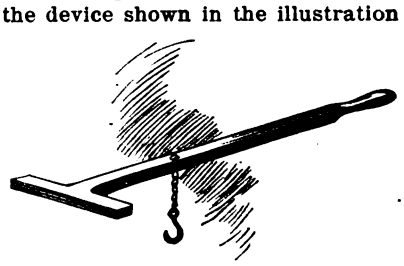
DEVICE FOR PULLING BEAD MOLDS FROM SECTIONAL VULCANIZERS.

Instead of using a hammer to remove bead molds from sectional vulcanizers, and battering the molds in the process, if the device shown in the illustration is



Detailed Sketch of the Tool.

used, the bead molds can be removed with a minimum of time and labor. The new tool which can be made in any blacksmith shop consists of a three-foot bar of iron either round or square dimensions, one inch wide and ½ inch thick, with a hole bored through the wide dimension 10 inches from one end. The bar should be slightly bent with the concave or "dished" side up. At the end from which the measurement was taken to bore the hole, a flat 10-inch bar of the same size iron is welded, with small fillets to stand the strain of a pull. In the hole in the main bar is attached a blunt hook and a stout chain—the whole totaling but six inches in length.

To use, place the cross bar on top of the vulcanizer, set on the lugs and place the hook under the head molds at the end of the section and lift up. The beads will come out without any trouble.

Roster of Officers and Membership of National Automobile Chamber of Commerce

THE National Automobile Chamber of Commerce, Inc., has just issued a complete roster of its officers, committees and membership, including also the objects of the organization. These are stated as follows:

To foster the interests of those engaged in the trade or business of manufacturing automobiles and all other self-propelling vehicles; to reform abuses relative thereto; to secure freedom of its members from unjust or unlawful exactions; to diffuse accurate and reliable information as to the standing of merchants and others dealing with members, as to all inventions, patents, processes or devices designed or intended for use in, upon, or in connection with such vehicles and the manufacture thereof, as to the state of the art relative thereto, and as to the condition and development of the trade in which the members are engaged, in the United States and foreign countries; to procure uniformity and certainty in the customs and usages of such trade; to promote the construction of better highways; to advocate the enactment of just and equitable laws affecting members; to settle differences between members; to promote a more enlarged and friendly intercourse among business men engaged in such trade or dealing with persons engaged therein; to acquire by grant, gift, purchase, devise or bequest, to hold and to dispose of such property as the purposes of the corporation shall require, subject to such limitations as may be prescribed by law, including inventions, letters patent and processes, or rights thereunder, for the benefit of its members and not for pecuniary profit.

The offices of the association are given as follows: 7 East 42nd street, New York; Riggs building, Washington, D. C.; Ford building, Detroit, Mich.

Officers and Committees.

The officers, committees, etc., are as follows:

President, Charles Clifton, Pierce-Arrow Motor Car Co.; first vice president, Hugh Chalmers, Chalmers Motor Co.; second vice president, passenger car division, R. D. Chapin, Hudson Motor Car Co.; second vice president, motor truck division, Windsor T. White, White Motor Co.; secretary, C. C. Hanch, Maxwell Motor Co., Inc.; treasurer, H. H. Rice, Chevrolet Motor Co.

Board of Directors—A. J. Brosseau, Mack Brothers Motor Car Co.; Hugh Chalmers, Chalmers Motor Co.; R. D. Chapin, Hudson Motor Car Co.; C. W. Churchill, Winton Co.; Charles Clifton, Pierce-Arrow Motor Car Co.; R. H. Collins, Cadillac Motor Car Co.; John F. Dodge, Dodge Brothers; J. Walter Drake, Hupp Motor Car Corporation; C. C. Hanch, Maxwell Motor Co.; Alvan Macauley, Packard Motor Car Co.; William E. Metzger, Columbia Motors Co.; R. E. Olds, Reo Motor Car Co.; H. H. Rice, Chevrolet Motor Co.; Windsor T. White, White Motor Co.; John N. Willys, Willys-Overland Co.

General manager, Alfred Reeves; assistant general manager, J. S. Marvin; show manager, S. A. Miles.

Committees.

Legislative—Chairman, H. H. Rice, Chevrolet; secretary, Harry Meixell, Jr., N. A. A. C.; D. C. Fenner, Mack; J. I. Farley, Auburn; David S. Ludlum, Autocar; F. I. Barrows, Lexington.

Patents—Chairman, C. C. Hanch, Maxwell; manager, R. A. Brannigan, N. A. A. C.; Windsor T. White, White; C. W. Churchill, Winton; Wilfred C. Leland, Lincoln; William MacGlashan, Studebaker.

Traffic—Chairman, William E. Metzger, Columbia; manager, J. S. Marvin, N. A. A. C.; A. I. Philp, Dodge Brothers; F. C. Chandler, Chandler; William L. Day, G. M. C.; George Dickson, National.

Passenger Car Shows—Chairman, John N. Willys, Willys-Overland; manager, S. A. Miles, N. A. A. C.; H. G. Root, Westcott; Harry M. Jewett, Paige.

Motor Truck Shows—Chairman, M. L. Pulcher, Federal; manager, S. A. Miles, N. A. A. C.; A. J. Whipple, Diamond T; David S. Ludlum, Autocar.

Highways—Chairman, Roy D. Chapin, Hudson; secretary, Pyke Johnson, N. A. A. C.; William E. Metzger, Columbia; Royal R. Scott, Willys-Overland; S. M. Williams, Garford; George M. Graham, Pierce-Arrow.

Electric Vehicle—Chairman, W. C. Anderson, Detroit; Fred R. White, Baker; H. W. Suydam, Milburn.

Membership—Chairman, C. W. Churchill, Winton; J. Walter Drake, Hupp; A. J. Brosseau, Mack.

Insurance—Chairman, William E. Metzger, Columbia; E. T. Strong, Buick; George E. Goddard, Dodge Brothers; Milton Tibbetts, Packard; F. L. Jewett, Paige; E. A. Williams, Jr., Garford; M. L. Pulcher, Federal.

Foreign Trade—Chairman, J. Walter Drake, Hupp, secretary, H. R. Cobleigh, N. A. A. C.; P. S. Steenstrup, General Motors; H. M. Robins, Dodge Brothers; Jay Rathbun, White; E. C. Morse, Willys-Overland; J. P. Roberts, Studebaker, H. B. Phipps, Hudson.

Conservative—Chairman, W. C. Sills, Chevrolet; T. R. Lippard, Stewart; M. Cook, Service; F. E. Bradfield, Velie; C. A. Baird, Cunningham.

Motor Truck—Chairman, Windsor T. White, White; secretary, F. W. Fenn, N. A. A. C.; Ray C. Chamberlin, Packard; George M. Graham, Pierce-Arrow; Victor L. Brown, Sterling; M. L. Pulcher, Federal; R. H. Salmons, Selden; D. C. Fenner, Mack.

Rural Motor Express—Chairman, James L. Geddes, Kelly-Springfield; E. A. Williams, Jr., Garfield; O. H. Browning, International Harvester; A. T. Murray, Bethlehem; George D. Wilcox, Commerce.

Hand Book—Chairman, E. T. Strong, Buick; F. H. Akers, Reo; George A. Kissel, Kissel; Garvin Denby, Denby.

Service—Chairman, E. T. Herbig, Service; H. W. Drew, Packard; W. M. Ladd, Pierce-Arrow; A. B. Cumner, Autocar; W. M. Britton, Republic; C. T. Hillshafer, Chandler; W. B. Riley, Jordan.

Truck Standards—Chairman, D. C. Fenner, Mack; Francis W. Davis, Pierce-Arrow; F. A. Whitten, G. M. C.; E. M. Sternberg, Sterling; F. F. Beall, Packard.

Passenger Car Standards—Chairman, Howard C. Marmon, Marmon; N. E. Wahlberg, Nash; Ralph Davis, Mitchell; George B. Allen, Liberty; L. C. Freeman, Maxwell.

Motor Fuel—Chairman, John N. Willys, Willys-Overland; Alvan Macauley, Packard; C. W. Nash, Nash; John F. Dodge, Dodge Brothers; E. A. Williams, Jr., Garford.

Representing Automotive Industry in Conference with Representatives of Oil Industry—Chairman, John N. Willys, Willys-Overland; Alvan Macauley, Packard; C. W. Nash, Nash; H. L. Horning, representing Motor & Accessory Manufacturers' association; C. F. Kettering, representing Society of Automotive Engineers.

Representatives on National Industrial Conference Board—Charles Clifton, Pierce-Arrow; A. J. Brosseau, Mack.

National Councillors to Chamber of Commerce, U. S. A.—Charles Clifton, Pierce-Arrow, Buffalo, N. Y.; R. H. Johnston, White, Washington, D. C.

Membership.

The present membership in the National Automobile Chamber of Commerce includes 86 makers of passenger cars and 61 motor truck manufacturers. The complete list, with the trade name of the car and address, is as follows:

Passenger Car Manufacturers.

Allen, Allen Motor Co., Columbus, O.; Anderson, Anderson Motor Co., Rock Hill, S. C.; Apperson, Apperson Brothers Automobile Co., Kokomo, Ind.; Auburn, Auburn Automobile Co., Auburn, Ind.

Baker, Baker R & L Co., Cleveland, O.; Brewster, Brewster & Co., Long Island City, N. Y.; Briscoe, Briscoe Motor Corporation, Jackson, Mich.; Buick, Buick Motor Co., Flint, Mich.

Cadillac, Cadillac Motor Car Co., Detroit, Mich.; Case, J. I. Case Threshing Machine Co., Racine, Wis.; Chalmers, Chalmers Motor Co., Detroit, Mich.; Chandler, Chandler Motor Car Co., Cleveland, O.; Chevrolet, Chevrolet Motor Co., New York, N. Y.; Cleveland, Cleveland Automobile Co., Cleveland, O.; Cole, Cole Motor Car Co., Indianapolis, Ind.; Columbia, Columbia Motors Co., Detroit, Mich.; Commonwealth, Commonwealth Motors Co., Chicago, Ill.; Crow-Elkhart, Crow-Elkhart Motor Co., Elkhart, Ind.; Cunningham, James Cunningham Son & Co., Rochester, N. Y.

Daniels, Daniels Motor Car Co., Reading, Pa.; Davis, George W. Davis Motor Car Co., Richmond, Ind.; Detroit Electric, Detroit Electric Car Co., Detroit, Mich.; Dodge Brothers, Dodge Brothers, Detroit, Mich.; Dorris, Dorris Motor Car Co., St. Louis, Mo.; Dort, Dort Motor Car Co., Flint, Mich.

Elcar, Elkhart Carriage & Motor Car Co., Elkhart, Ind.; Elgin, Elgin Motor Car Corporation, Chicago, Ill.

Fiat, F. I. A. T., New York, N. Y.; Franklin, H. H. Franklin Manufacturing Co., Syracuse, N. Y.

Glide, Bartholomew Co., Peoria, Ill.; Grant, Grant Motor Car Corporation, Cleveland, O.

Haynes, Haynes Automobile Co., Kokomo, Ind.; Hollier, Lewis Spring & Axle Co., Chelsea, Mich.; Holmes, Holmes Automobile Co., Canton, O.; Hudson, Hudson Motor Car Co., Detroit, Mich.; Hupmobile, Hupp Motor Car Corporation, Detroit, Mich.

Jackson, Jackson Motors Corporation, Jackson, Mich.; Jones, Jones Motor Car Co., Wichita, Kan.; Jordan, Jordan Motor Car Co., Cleveland, O.

King, King Motor Car Co., Detroit, Mich.; Kissel Kar, Kissel Motor Car Co., Hartford, Wis.; Kline Kar, Kline Car Corporation, Richmond, Va.

Lexington, Lexington Motor Co., Connersville, Ind.; Liberty, Liberty Motor Car Co., Detroit, Mich.; Lincoln, Lincoln Motor Co., Detroit, Mich.; Locomobile, Locomobile Co. of America, Bridgeport, Conn.; Lorraine, Lorraine Motors Corporation, Grand Rapids, Mich.

BOOTY VACUUM-CONTROL CARBURETOR

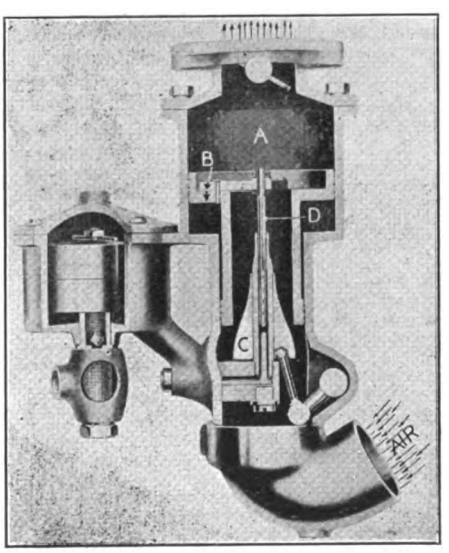
A CARBURETOR that is claimed to be entirely new and original in principle, extremely simple in construction, which is maintained to have exclusive and distinguishing qualities, radically from other carbureting instruments, is the Booty, the details of which have just been made public.

The principle of operation is clearly shown in the accompanying sectional illustration. When the throttle valve is partially open the piston (b) rises and creates an area of opening around the cone (c). This admits the volume of air required by the opening of the throttle, and the grooves in the fuel metering pin (d), which are very shallow at the top and gradually deepen to the bottom, permit the measurement of the ratios of air and fuel required at all loads and speeds of the engine.

Statement is made that the velocity of air through the mixing chamber is constant at all engine speeds and does not vary from the idling to the full load. In this it differs from all other carburetors. The constant velocity of the air is obtained by the movable venturi, which is represented by the bottom of the piston (b) and the contour of the cone (c). The floating piston maintains a constant vacuum in the carburetor, which is very low (approximately one inch mercury column), this giving a very high volumetric efficiency.

Claim is made that water entering the fuel supply pipe with the fuel will not affect the functioning of the carburetor; that water may be poured into the float chamber while the engine is running without affecting its efficiency. This is explained by the low internal depression and the large orifices in the metering pin through which the water is drawn freely and quickly. This self-scouring quality removes dirt, dust or any foreign substance which would prevent the operation of other type instruments.

The proportions of air and gasoline vapor required for perfect carburetion is determined by shape of the cone and the depth of the taper grooves in the metering pin, which are very shallow when the piston is in an idling position, but increase in depth as the pin is raised by the piston. As the piston is lifted the opening around the venturi cone is increased so that the shape of the cone and the graduated depth grooves in the metering pin when calibrated, the one to the other, must supply accurate volumes of gasoline and air.



Cross Section of the Booty Vacuum-Controlled Carburetor, Showing the Principles of Operation.

The design of the Booty carburetor is unusual in that it has but one adjustment and that on the instrument board or steering post, where it can be adjusted by the driver to meet whatever conditions may be experienced. This must not be confused with a primer or choke, as it is a positive adjustment for the fuel. The object of this control is to raise the cone (c), which automatically causes the piston to rise to maintain its fixed and constant vacuum. At the same time the piston (b) is raising the metering pin (d), which increases the depth of the fuel orifices enriching the mixture to whatever degree is desired. Claim is that any desired density of mixture constant throughout the range of the carburetor may be obtained by setting the cone. The rising of the cone will create a rich mixture for starting a cold engine, instead of choking the air by the setting of butterfly valve in air intake.

The manufacturer claims that the Booty carburetor is suited for all makes and types of engines, and that any individual instrument will be equally efficient in use on a car, truck, tractor, aeroplane, marine or stationary engine. All parts are standard and are interchangeable.

KEEPING THE WINDSHIELD CLEAN.

While the windshield is still dry, rub it lightly with cotton dipped in glycerine. Repeat this operation at intervals and the windshield will always afford clear vision in rain or snow.

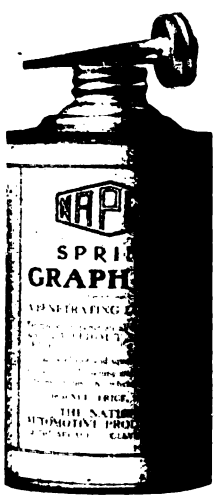
NAPCO GRAPH-OIL, A NEW SPRING LUBRICANT.

The National Automotive Products Co., 331 The Arcade, Cleveland, O., has perfected the formula of a lubricant for the springs of automobiles, which may be effectively applied without spreading the leaves of the springs. This has been named "Napco Spring Graph-Oil," and consists of seven different ingredients, the base of which is a high-grade lubricating oil, together with graphite, creosote and four other penetrating oils. It is said to contain no naphtha, kerosene or gasoline.



"Graph-Oil" is applied to one side of the spring, and it is stated by the manufacturer that it will penetrate between the leaves without spreading, and will come out on the opposite side in from 30 seconds to three minutes time, leaving a graphite deposit between each leaf. It is also claimed that if it is applied to a rusty nut or connection it will sink in around the threads, loosen the bond of rust or corrosion, making removal easy.

Napco Graph-Oil is guaranteed to remove rust, to prevent it from forming and not to collect dust. It is put on the market in 16-ounce cans at a list price of 75 cents a can. The manufacturer will furnish dealers' discount on application.

ELLIS JOINS V. A. NIELSEN CO.

Robert M. Ellis, who is well known in the automobile trade of the East, has joined the firm of V. A. Nielsen Co., manufacturers' sales agent for automobile equipment, 708 Beacon street, Boston. Mr. Ellis has been for some years manager of the Splitdorf Electrical Co. and will have charge of the sales department of the Nielsen Co., which represents, among other well known lines, Connecticut ignition, India ignition and starting cable, and Briggs-Stratton Co.'s Basco switches. In coming to the Nielsen Co. Mr. Ellis becomes secretary and Mr. Nielsen is treasurer.

MASTER CARBURETOR CO. IN NEW QUARTERS.

The Master Carburetor Co. has taken possession of its new plant at Main and 30th streets, Los Angeles, Cal., and is now installed in what is claimed to be one of the largest carburetor factories in the West. The output of Master carburetors will, by the first of March, when the new unit is under full production, be increased many times.

Dort Co. Takes Over Lull Plant

The Dort Motor Car Co., Flint, Mich., has taken over the extensive plant of the Lull Carriage Co. at Kalamazoo, Mich., to increase its capacity for the manufacture of its Fourseason sedan and coupe models. This entails an expenditure of about $500,000, and will add 150,000 square feet of floor space to the Dort production facilities. One of the Lull units has been already turned over and possession of the other will be given May 1. In the first building a complete wood working plant will be installed, together with a new set of boilers in the power house. The daily schedule will include 150 to 200 sets of body parts.

The other four-story building will be devoted entirely to the assembling, painting and trimming of enclosed bodies. At the Kalamazoo plant, which will be operated as a complete unit, the wood parts for open bodies will be made, but the assembly of these will continue at Flint. About 250 men will be employed at Kalamazoo.

This deal does not in any way effect the Dort company's building programme at Flint, where work on the new plant in the east end of the city is being rushed to completion.

GUTHARD MAKES $100,000 SHIPMENT.

The Edgar C. Guthard Co., Chicago, recently shipped a full car load of its Billmont Master wrenches to a group of Pacific coast jobbers. The Billmont is a socket wrench designed to be almost

as universal in its utility as a monkey wrench. The shipment in question consisted of 10,000 of these wrenches, each having a retail value of $10. The necessary sockets, five for each tool, went with each wrench, also a special adapter which permits the use of any standard size socket.

BLACK & DECKER OPEN CHICAGO OFFICE.

Black & Decker Manufacturing Co., Towson Heights, Baltimore, Md., has established a permanent office and show room at 1436 South Michigan avenue, Chicago, in charge of R. G. Ames, whose territory has been extended to cover the entire mid-west. Mr. Ames will be assisted by the following:

F. E. Marrion, who will be in charge of the "missionary" work, so-called, and J. N. LaBalle, who will be located at Chicago. Salesmen working from the Chicago office—Henry Fornare, C. E. Lee, L. C. Lee, T. H. Scaffe, H. P. Archer, L. C. J. Gehring.

COLUMBIA'S NEW GRINDER BOOK.

The Columbia Manufacturing Co., Inc., Belleville, Ill., has issued its Grinder Book No. 26, which is a catalogue of its line of grinders and buffers, countershafts and presses for the heavy hardware mill supply and automotive trades.

The various machines represented have been perfected over a period of 36 years successful manufacturing experience and are designed for simplicity and efficiency, as well as for strength and wearing qualities, and are accompanied by a warranty guaranteeing them free from imperfection of material or defection in workmanship.

BURGESS SALES MANAGER.

On Feb. 1 the Walter S. Burgess Co., St. Joseph, Mich., manufacturer of the Burgess rebound shock absorbers, completed the formation of its own sales organization with Proctor H. Patten, formerly with the Zinke Co., Chicago, in charge of sales.

LOBER NON-BURSTING RADIATORS.

The Nelson J. Quinn Co., Toledo, O., is putting on the market the Lober non-bursting radiator, which, it is claimed, absolutely, eliminates all trouble from freezing even in extreme cold weather.

Its construction is as simple as it is effective to serve its purpose. Radiator is secured by vertical water ways formed by placing corrugated brass plates face to face. Wide strips of spring brass hold the plates firmly together so that the corrugations form in effect upright water tubes. Should freezing occur, no injury results it is claimed, as the plates merely separate enough to allow for the expansion and, when the water thaws, the springs bring the plates back as they were, undamaged, squarely in line and ready for business.

The Lober radiator is also designed for efficiency in hot weather as well as under conditions of extreme cold, as the extra large size of the radiating surfaces obviates overheating and boiling of the water. Only the best of material is used in its construction, and each one is sold with a positive guarantee.

WAR DEPARTMENT.
WASHINGTON.

DEPARTMENT OF MILITARY AERONAUTICS.

August 23, 1918.

From: Ralph Earle, 2nd Lieut., A.S.,S.C.

To: Materiel Branch, Supply Section, D. M. A.

Subject: Test of ignition devices.

1. Reference your memorandum of August 22nd, the six Alsop Ignition Devices per your order have been received and four of same have been installed.

2. The first device was installed August 20th on Ford car No. 28. The preliminary test consisted of using spark plugs with broken porcelains which had previously been discarded as worthless. By the use of the device the necessary spark was obtained through these heretofore useless plugs, enabling the engine to function perfectly with them.

3. The second test consisted of filling the crank case with twenty-four quarts of oil which filled same, the oil running out of the breathing pipe, and running the engine until all plugs were sooted to such an extent that all cylinders but one ceased to fire. The ignition device was then thrown in and within a distance of two city blocks all plugs began to fire and continued to do so throughout the test.

4. The other plugs were installed and are now in operation. No further special tests were made as the above was considered amply sufficient to demonstrate the efficiency of the devices.

Ralph Earle
2nd Lieut., A.S.,S.C.

This Wonder DEVICE

as one user says, "comes as near making the impossible happen as anything ever seen."

The "Alsop-All-Spark" WILL PREVENT SPARK PLUG TROUBLES

WE KNOW

It will save fuel and spark plugs—
It will fire dead carbon-choked plugs—
It will cause perfect combustion—
It will guarantee increase of gasoline mileage—
It will do away with changing spark plugs—
It will prevent running engine with a misfire—
It will give a more powerful spark—
It will eliminate carbon and vibration—
It will increase speed and power—
It will fortify any ignition system.

BUT DON'T TAKE OUR WORD FOR IT—HERE IS A GOVERNMENT TEST.

Read it then send for our catalogue of Government Tests and Illustrated Information—or better still send for a device—with money back guarantee. You can install it on any four cylinder car. IT WILL MAKE YOUR CAR RUN AND WILL GIVE YOU A HOT FAT SPARK WHEN EVERYTHING ELSE FAILS. There are no dangerous exposed spark gaps which may set a car afire.

$7.50

New Furber 100 Per Cent. Spark Plug

After several years of experimenting, costly investigation and exhaustive tests, a spark plug has been developed and placed on the market by the Furber Manufacturing Co., 614 Washington street, Lynn, Mass., that is claimed to be 100 per cent. efficient for use under all conditions to be met with in modern gasoline engines and will stand the terrific pounding of the highest compression motor.

Frederick M. Furber, President and General Manager, Furber Manufacturing Co.

Roland T. Parker, Vice President and Sales Manager, Furber Manufacturing Co.

The plug itself, as well as the method of its manufacture and the machinery used, are protected by patents secured both in the United States and abroad. The Furber company states that it is willing to stake the reputation of the Furber 100 Per Cent. Plug on the high quality of its insulation alone. The electrode wires are of special nickel-manganese alloy, which will not burn or fuse. The center electrode is cemented and baked in by a new process which allows for expansion and contraction and at the same time makes it inseparable from the insulator.

Outside of the quality of material used the merit of any spark plug depends largely on the method of securing the insulator within the shell. Continued experiments and tests have shown that a permanently tight joint is impossible when the common methods of making a joint between the insulator and shell are used. The average plug leaks compression; most users of plugs know that if a two-piece plug is tightened enough to make it gas tight, the insulator is generally broken.

In the Furber 100 per cent. plug the insulator is placed in the shell with two gaskets and one hard brass ring, one gasket under the insulator, the hard brass ring and the other gasket on the top shoulder. It is then passed to an automatic machine, which turns the flange of the shell over the shoulder of the insulator, applying 4000 pounds pressure on one small portion of the flange, this being progressively done all the way around the flange until finally 210 blows of the die, each with 4000 pounds pressure, have been applied. Yet at no time has the insulator been subjected to more than 4000 pounds pressure at one time. This process actually rivets the insulators in.

The maker gives a positive guarantee that the Furber 100 per cent. spark plug must give satisfaction or money will be refunded.

The officers of the Furber Manufacturing Co. are: President and general manager, Frederick M. Furber; vice president and sales manager, Roland T. Parker; treasurer, Harry Eisner. Production plans contemplate the manufacture of about 1,000,000 plugs the present year.

JONES IS SALES MANAGER FOR WINTHER.

E. Z. Jones, the new manager of sales of passenger cars for the Winther Motor Truck Co., Kenosha, Wis., has inaugurated a sales campaign which it is believed will prove effective in greatly stimulating the distribution of Winther cars. Distributors are to be offered a five-year contract, developed along lines calculated to assure them of reaping the benefit from the preliminary work which is being done in merchandising the Winther line. The plan to be adopted is the result of Mr. Jones' extensive experience as a retailer, distributor and factory representative in the automobile industry. He was southern district manager for the Kissel Motor Car Co., with headquarters at Atlanta, Ga.. before joining the Winther forces.

The Milwaukee Tank Works, Milwaukee, Wis., has announced an increase in the price of its products, effective Feb. 15, this being accompanied by important changes in wholesale jobbing and resale discounts.

ANNUAL STATEMENT OF GRAY & DAVIS.

Gray & Davis, Inc., Boston, manufacturer of starting-lighting equipment, has declared a dividend of 50 cents a share on common stock, payable March 1 to stockholders of record Feb. 24. This is the first dividend made on the present outstanding issue of 108,904 shares of common stock. In April, 1913, a $5 dividend was paid on common, the following July $30 a share was paid, and in March, 1916, 25 per cent.

The profits for the year ending Dec. 31, 1919, were $465,680; dividends paid on preferred stock during the year, $27,-137; surplus on hand Dec. 31, 1919, $613,-268; surplus on hand Jan. 1, 1919, $248,415.

IMPROVEMENT ON THE FORD STOVE.

The National Automotive Products Co., 331 The Arcade, Cleveland, O., is offering to the Ford trade the Napco automatic moisture system, which is designed to supply hot moist vapor to the regular air intake of the Ford carburetor. The working parts of the system consist of a funnel shaped sub-manifold made of aluminum, with a three-inch opening at the large end and tapering down to 1¼ inches at the small end. It is 15 inches long and is placed on top of the exhaust manifold. The bottom side is open and all the heat from the exhaust manifold enters and is driven back into the carburetor air intake by the air currents induced by the fan. A small flexible tubing connects this stove to the overflow pipe and all the moist vapor that would ordinarily pass out through the overflow pipe without being utilized is worked back through the motor automatically as the engine requires moisture.

A simple means is provided to take care of the overflow water either from boiling or in filling the radiator, and it is stated that it is impossible for any water to find its way into the carburetor.

The Napco automatic moisture system can be easily installed in 10 minutes time, is entirely automatic and has no moving parts. One hundred per cent. more mileage, greater power, more speed and flexibility, permitting the engine to pick up faster and run more smoothly in damp weather are guaranteed by the manufacturer, as well as elimination of carbon deposit.

The retail price is $7.50.

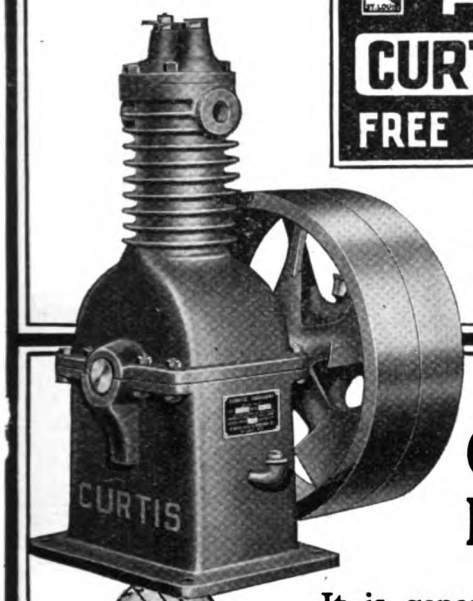
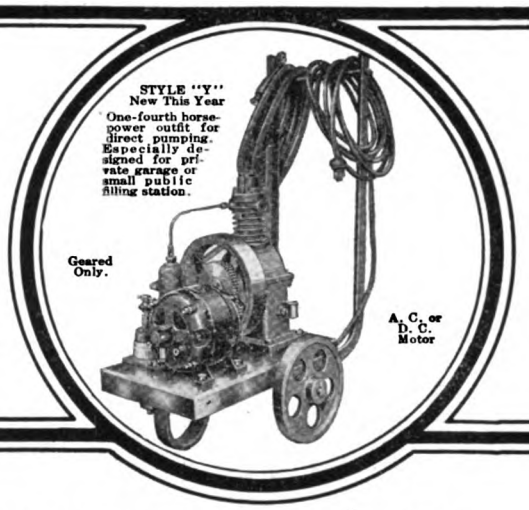
FREE
CURTIS AIR
FREE FROM OIL

The Curtis Sign is 10x14 inches—baked enamel on steel. Furnished FREE with every Curtis Garage Air Compressor—can not be had in any other way.



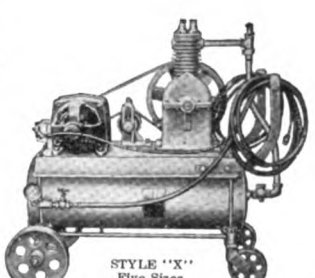


Curtis Free Air Service Brings You New Patrons and Increased Profits

It is generally recognized that compressed air to fill tires frequently carries oil and that this oil has a deteriorating effect on inner tubes. For this reason motorists are discriminating in their use of "free air service"—and are on the lookout for the Curtis sign because they know that Curtis Air is free from oil. It may be that the installation of the CURTIS outfit will be the beginning of a new era of profit-making for you.

Curtis Air—Free From Oil

Curtis Air Compressors, through a patented construction, prevent oil from getting into the air line—therefore the air delivered is clean, pure and free from oil. The many other exclusive points of superiority, together with the simplicity, sturdiness and dependability of Curtis Compressors make them the popular choice everywhere. With the two new outfits illustrated—Style "Y" and Style "V"—the Curtis line is now complete, offering a suitable compressor to meet every requirement. Ask your jobber or write us for illustrated literature describing the different sizes and types of outfits.



STYLE "X"
Five Sizes
Has controlled splash oiling air-cooled compressor, with belt fan flywheel or with cut flywheel gear. A. C. or D. C. motor. Belted or geared.

CURTIS PNEUMATIC MACHINERY CO.

Give That Motor a Drink— And It Will Work Harder

Does carbon in your motor worry you all the time, like it does the thousands of other car owners? There's only one thing to do. Be your motor's doctor and cure it of indigestion.

Once a week, while the motor is hot, give it a glass of water. You won't have carbon troubles then.

Does your car give you only fifteen miles to the gallon of gasoline? There's twenty miles in each gallon, if you want to get it. Why not cure that motor of over-eating and get five miles more!

Equip your intake manifold with a Re-Carbureter. Test it for 30 days. If you do not find it will do all we claim for it, return the Re-Carbureter and we'll refund the $5.00 you paid for it.

This is the way to banish carbon. With a squirt can, put water in the Re-Carbureter intake. Let the hot motor suck in the water. The steam breaks up into oxygen. Pure oxygen eats up carbon on pistons, cylinder heads and rings, with ease. The motor works better than ever after its drink.

If you prefer, the Re-Carbureter Oxy-Generator, which fits the threaded intake of the Re-Carbureter and allows you to feed the water from a cup or glass, is supplied at $1.00.

How you save the five or more miles usually wasted in every gallon of fuel.

The Re-Carbureter re-mixes the gas before feeding the engine. The Re-Carbureter is controlled automatically by the motor. It feeds only what the motor can convert into power.

Without the Re-Carbureter you feed the motor too much. The surplus makes carbon. Some of it leaks into the oil pan and dilutes your lubricant.

There is a third value to the Re-Carbureter. It is an excellent primer when the motor is cold. Squirt a few drops of gasoline or gas and ether into the Re-Carbureter. The motor will fire instantly.

Write for more information. Or better still, place your order now. Our Written guarantee protects you.

Dealers will find the Universal Re-Carbureter a profitable accessory. Get in touch with our proposition.

AN APRON THAT'S REALLY ACID PROOF

Our chemists solved a great problem when they produced "Invincible" acid-proof fabric—not only 100% acid proof, but pliable and wear proof.

INVINCIBLE ACID-APRON

Used by the largest factories in America in acid, pickling and nickel plating departments. Has withstood the most severe tests.

Furnished complete with neck tape and adjustable chain fastener for waist and in various sizes to suit your needs.

Send Coupon for sample and full information.

IBSCO AUTOMATIC BATTERY STEAMER AND STILL

A necessity in every battery station.

IBSCO Steamers and Stills are all made of spun aluminum. No seams; only aluminum and brass come in contact with water. One cell or all can be removed in from three to five minutes. Water is distilled at the rate of about a gallon an hour.

No. 1 IBSCO Steamer and Still has automatic valve. Just attach to city water and turn on. The valve does the rest.

No. 5 IBSCO hasn't the automatic valve. Must be filled by hand. Outside glass gauge shows water level at all times.

Any kind of heating plant or gas burner will operate an IBSCO.

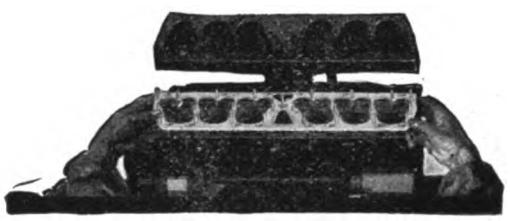
Jobbers Like to Handle Victor Gaskets Because There Is a Type for Every Motor



Showing perfect alignment of Victor Gaskets with studs, combustion chambers and waterways

Jobbers appreciate the fact that we make the most complete line of copper-asbestos gaskets in the country. They are also enthusiastic over the Victor policy of protection on every sale in their territory.

We have in stock at all times more than 300 types of cylinder head gaskets. Including exhaust, manifold, carburetor, spark plug and other types, the Victor line embraces over 4,000 numbers.

Victor quality is indicated by the judgment of a majority of America's largest manufacturers of motor cars in specifying Victor copper-asbestos gaskets as standard equipment.

If you are not now handling the Victor line, write us. Our plan will be as profitable to you as it is to the majority of the leading jobbers in the country.

Why the Harvey
Unbr
Why M

THE Harvey Boltless Spring has ***no weak spots.*** It is just as strong at the center as it is anywhere else. No metal has been removed at the center, no fractures made—the fibre of the steel is unbroken.

This feature, with that of the special Harvey process of heat treating and tempering each leaf accurately and uniformly, gives the Harvey Spring unsurpassed strength and resilience.

Thus the Harvey dealer is amply protected—every Harvey Spring is guaranteed against breakage or sagging.

The ordinary spring has a weak spot where the hole is punched to accommodate a bolt. Such a spring needs but a little added strain to induce one of the minute fractures starting at the hole to extend and enlarge to the full width of the leaf.

Harvey dealers are aided by a generous supply of sales helps, movie slides, window decalcomanias, inside wall posters and the helpful Harvey book containing specifications for more than 1500 Harvey springs. Write for this book now.

FORDS are Non-Stallable when Equipped with Dyneto STARTING and LIGHTING SYSTEM

REGISTERED TRADE MARK

You can gain profitable and well-pleased Ford customers by selling them this high-grade, dependable starting and lighting system. It has "big car" quality. It makes Fords non-stallable.

There is a good profit for the dealer.

The Dyneto System is complete with motor-generator, storage battery, battery box, all wiring, switches, brackets, sprockets, etc., etc. Can be easily installed.

It has the same characteristic features as the Dyneto system that has been used continuously since 1913 on America's highest priced light weight car, the Franklin.

Makes Fords NON-Stallable

The big advantage of this system over others is that it makes the engine NON-Stallable. If too sudden application of clutch brings motor to stop, Dyneto instantly takes hold and starts it—**automatically—driver** doesn't have to press a button or move a lever.

In emergency, Dyneto is powerful enough to move car out of danger, without the motor.

Liberal Discounts To Live Dealers

A WONDER LUBRICANT FOR CAR AND TRUCK SPRINGS

"Napco" Graph-Oil

Simply apply "Napco" to the sides of the springs with an oil can—

It will make springs work properly.

It will protect springs against breakage.

It will save in repair costs and replacements.

It will stop all spring noises.

It will make the vehicle ride easily.

It will save tires.

It keeps the springs from becoming rusty.

It adds to car service and comfort.

It will penetrate in between the leaves, cover and absolutely lubricate the surfaces of the leaves.

"Napco" used only on one side of a spring will come out the opposite side in from 30 seconds to three minutes without spreading.

A few drops of "Napco" will make easy starting of rusty nuts, bolts and connections, as it penetrates around the threads and loosens the rust.

With "Napco" there is no need to spread the leaves to lubricate them. It makes quick and easy work of a dirty job. Because it is easy to apply, operators and repairers will use it.

Jobbers and Dealers.

"Napco" Graph-Oil is a guaranteed product. It saves in time and labor. There is nothing like it and it is 100% efficient. It is a wonder worker, something essential in the tool kit, garage, repair and service station. It sells in a big way at a good profit to the trade.

"Napco" is sold in 16-oz. cans—List price, **75 cents.**

A special price when ordered in gallon cans or 50-gallon steel drums.

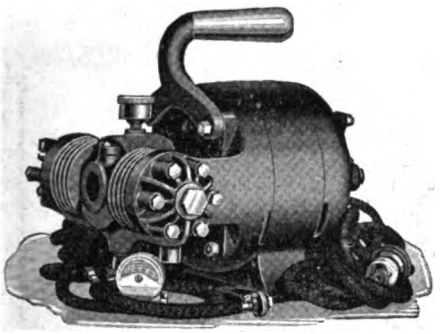
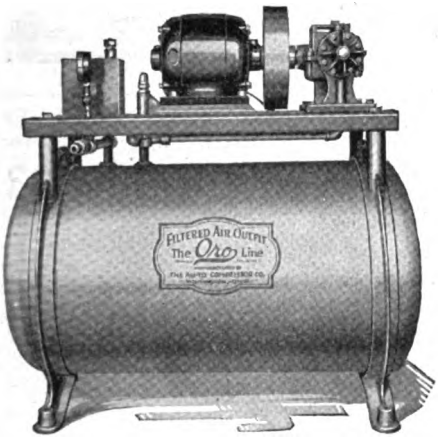
Air Compressors for Every Garage!



The Famous "No. 10"

"Carry it in your hand!"

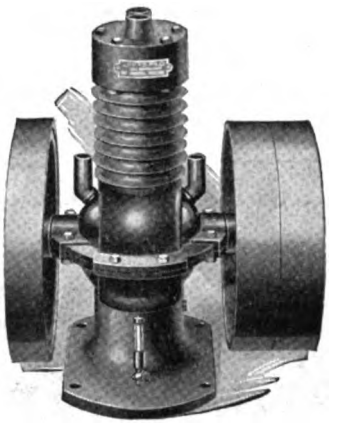
A complete outfit, yet it weighs only 35 pounds. It has motor, compressor, hose, gauge, and gives a pressure up to 100 pounds, supplying 2.61 cubic feet of air a minute.



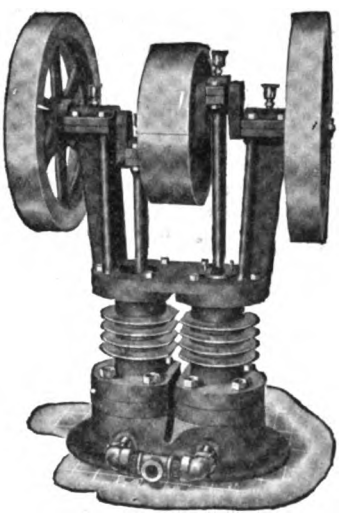
The "Filtered Air" Outfit

This perfect outfit is meeting the approval of all garages and motor car owners. It supplies air that is absolutely free of oil, dust and dirt. A complete outfit, ready to use. This outfit also is supplied with large wheel casters, if desired.

WHEREVER automobiles are known, Oro Air Compressors are used. They mean the most economical, most reliable source of air. These claims have been proved by hundreds of thousands of these machines in daily use.



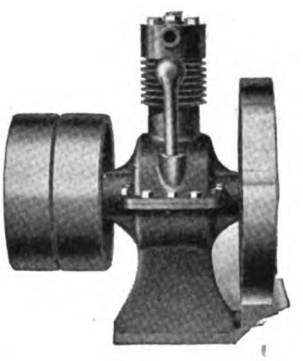
There is an Oro Air Compressor for every garage—public and private. Large outfits that will provide air in abundance for any number of cars; medium sized outfits for ordinary garages; and small outfits for the one or two men shops. There also is the No. 10 for small public or private garages and for spraying and air brush work.



Remember the Name

Oro
GOOD as GOLD

To buy an Oro Air Compressor means to secure the best outfit that can be manufactured. The quality of materials, the care and accuracy of the workmanship, and the superior design of the Oro, mean better satisfaction and a longer life of service.



Our guarantee also will interest you. We replace any parts free of charge, no matter what may have caused trouble. We have been building several thousands of these machines every year for the past twelve years and have never yet charged a cent for repairs of any kind.

Buy an Oro Air Compressor and be sure! Write us for information. We manufacture a large line of superior automobile accessories, in addition to the full assortment of compressors.

A GREATER COASTING RANGE

Shove a car using Dixon's Graphite Transmission and Differential Lubricant over the top of a decline and let it coast.

Shove another car of the same make, model and weight, but lubricated with ordinary grease, over the same decline, and let it coast—if it will.

The first car will outcoast the second one by a surprisingly large margin.

And so it is in actual driving. Ordinary grease permits frequent and ruinous metal-to-metal contact that sets up a dragging friction and soon wears out the moving parts.

DIXON'S GRAPHITE Transmission and Differential LUBRICANT

Dixon's Graphite Transmission and Differential Lubricant is sold by practically all good dealers and garage men.

Write for Booklet No. 49-G.

BRUNNER

PERPETUAL MOTION

Some things are impossible, regardless of ingenuity, skill or equipment. Engineers in any line know the limits Nature has established in their field.

Advertising claims or selling arguments which indicate too remarkable performance generally occur where a simple, conservative description would not be convincing.

You instinctively deal with the man or company whose every statement is simple and reliable. Any item bought from such a source is apt to be good - - not spectacular but dependable.

GARDNER AIR PUMPS

Result of 50 years manufacturing experience.

An inefficient air pump makes your air service expensive.
It hurts the quality of your service.
Makes a customer dissatisfied and hurts your business generally.

Install a GARDNER

It will pay for itself in a short time.
It is simple, rugged and efficient.
The fact that many filler stations supplying hundreds of car owners daily use the Gardner air pump is proof that experience had demonstrated it is economical.

TEN Reasons Why The A1 Battery Charging Clip is Superior

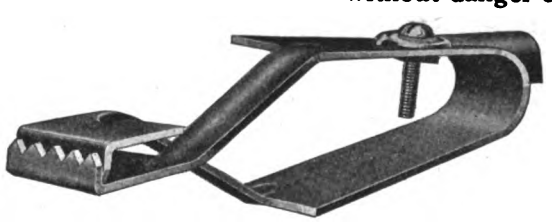
1—Made of the highest grade acid resisting BRONZE.

2—LEAD COATED, adding additional protection from the acid.

3—The only 1 piece clip —gives absolute conductivity to both jaws.

4—No springs to break and allow clip to fall over and short circuit battery or open charging circuit.

5—The pointed teeth insure positive connection.



6—Jaws of clip open 1½". Capacity 50 amperes.

7—The long legs allow clip to be used on batteries where connections are close together without danger of shorting.

8—Has a perfect terminal for wire connection which also protects wire from corrosion.

9—The long screw for wire connection acts as a stop, thus limiting the amount of pressure on the hinge of the clip and insures lasting tension.

10—Will outlast other clips several times.

PRICES: Less than 10, 25c. 10 to 100, 23c. 100 or more, 21c.

Send for free sample and be convinced. Sold by all leading jobbers.

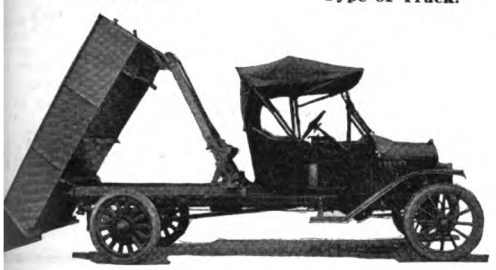
THE PEERLESS HAND HOIST

Single Cable Quadruple Worm Gear Drive

For Any Make or Type of Truck.



A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

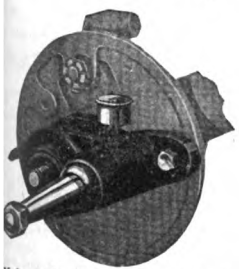
We specialize in building all-steel bodies for any need.

Write for complete information.

THE AUGLAIZE MOTOR CAR CO.

NEW BREMEN **OHIO**

EKERN'S
Emergency Axle No. 4



for

FORD CAR

Chassis

This unit is used by seating a short steel sleeve in the end of the axle housing from which the Hyatt roller bearing has been removed. It is retained by a brake shoe bolt fitted into a lug on the Emergency Axle.

The steel wheel spindle is tapered to fit rear hub and revolves in a four-inch bearing lubricated by a grease cup.

The axle height is not changed. The unit can be fitted if the machine is equipped with shock absorbers or other accessory. There is no wear of the axle housing or wheel hub. Can be installed in a few minutes.

Should an axle shaft be broken or bent, or the differential gearset gears locked, the car can be towed on its wheel at any reasonable speed.

Weight. 10 pounds. **List price, $8.**

Every Ford owner should read "Transforming the Ford." Tells how to secure smooth, positive brake action that no car can excel. A little "transforming" and your car will glide to a quick, quiet stop without the annoying, irritating clatter that you now experience. It will go into low or reverse without jumping or jerking, and you can pick up speed with all the smoothness and ease of a high-priced car. All accomplished without additional expense and the result is a clear saving of 75 per cent. in one direction alone. "Transforming the Ford" tells how it's done. Send for your copy this very minute. 10c stamps or coin. **CORMACK CO., Dept. 57, 500 Fifth Ave., New York City.**

"Just one idea alone, that I got from your book brought me a $50 job and a new customer. And I really couldn't run my shop without AMBU wiring diagrams."

The above letter from the repair shop owner is evidence of the actual money value of the AMBU books. A man drove up to his shop and said his starter wouldn't work and that three shops had failed to fix it. One look at it and a recollection of a point in the "Ford Standard Electrical Equipment" enabled this repair man to immediately diagnose the trouble. That gave him the job and a new customer.

THE AUTOMOBILE STORAGE BATTERY
Its Care and Repair.

The big second edition of this valuable book is now ready. Over 400 pages of vital technical information for the repair and battery shop man. Full of illustrations and diagrams. Tells how to equip a shop and to handle every possible kind of battery—no matter what the trouble is. Even the new 1920 batteries are described.
And in addition is a big chapter on "Farm Lighting Equipment" that is worth many times the cost of the whole book.
Know storage batteries—learn all about them from this simply written book.
Five days' examination..... **$5.00**

FORD STANDARD ELECTRICAL EQUIPMENT

This book not only describes every detail of the new F. A. Starting and Lighting System on Fords—with illustrations and diagrams that make it so clear that anyone can understand, but it describes every form of trouble in the ignition system as well. With the knowledge that this book gives, you can solve any problem that may come to you. 150 pages—47 illustrations—Send on 5 days' examination..... **$2.50**

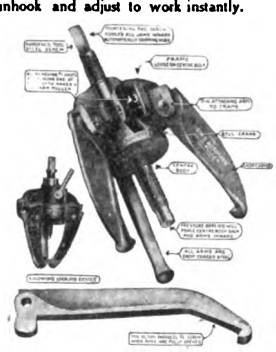
GREB AUTOMATIC GRIP PULLER

BEACH PATENT

"The One Best Bet" in Wheel, Gear and Bearing Pullers. Combinations of two or three jaws. Quick, Strong, Durable, Efficient and Simple. Positive Grip, cannot unhook and adjust to work instantly.



Greb Automatic Grip Puller

East of Rockies

Greb Arbor Press Base—designed to be used with the three long jaws of No. 1 Puller. Comes complete with two V Blocks and one V cap. Makes desirable equipment for pressing off gears, bushings, bending pipes, straightening shafts, etc. It is a good Bench Plate. Width 14 in. Depth 2 in., Diameter of Center Opening 2 1/2 in. Weight approx. 40 lbs. Price complete $12.50

Greb Bearing and Race Attachment for No. 2 Puller has a Knife edge and can be forced behind magneto, electrical generator and self-starter bearings and races where it is impossible for the jaws of any Puller to be attached. This attachment when used back of small gears and bearings not only saves them but the ends of the Puller jaws as well. Capacity—Bearings and Races up to and including 2 in.

Price complete $4.00

Greb Gear Attachment for all sizes of Greb Pullers has a 1/8 in. edge and can be forced behind gears where there is little or no room. This attachment when used back of small gears furnishes something for the jaws to get hold of and as it lays flat against the back of the gear it permits an even pull. Made in two sizes. Small size has capacity to take gears up to 3 in. on its front and 4½ in. on its back.

Price complete $5.00

Large size has capacity to take gears up to 4 in. on its front and 6 in. on its back.

Price complete $6.00

No. 1 Senior Size—designed for heavy work—a one man Puller with a locking device. Capacity 1 to 18 in. Complete with two sets of jaws, 7 in. jaws open to 10 in., and 12 in. jaws to 18 in. Screw of hardened steel, 1 in. diameter, 14 in. long. (See Arbor Press Base Attachment.) Shipping weight 30 lbs.

Price complete $25.00

No. 2 Junior Size—designed for all types of motors. Will remove magneto and pump shaft gears, couplings, etc. An efficient tool for all small work. Capacity 1 to 7 in. Complete with two sets of jaws 3½ in. jaws open to 4 in. and 6 in. jaws to 7 in. Screw of hardened steel, 9/16 in. diameter, 7½ in. long. (See Bearing and Race Attachment.) Shipping weight 4 lbs.

Price complete $12.00

No. 3 Intermediate Size—designed to pull the average motor gears, such as timing, piston, transmission, differential, and crank shaft gears, cardan and universal joints, pulleys and for general work. Capacity 1 to 12 in. Complete with two sets of jaws, 3 in. jaws open to 8 in., and 9½ in. jaws to 12 in. Screw of hardened steel, 7/8 in. diameter, 10 in. long. (See Gear Attachments.) Shipping weight 18 lbs.

Price complete $18.00

Security Auto Lock

Affords every protection to Ford car owners that a perfectly designed and extremely well made lock can give. While neat and attractive it is built very strong. In operation it is positive and the car can be left with a feeling of confidence that no one but the owner can use it.

It is the original loose wheel lock for Fords.

It is approved by underwriters.

It will reduce insurance premiums 15%.

When locked the car cannot be towed.

List Price, $6.00

It makes the Ford thief-proof

Anyone can easily install the Security in ten minutes. No drilling, filing, sawing or chiseling necessary. It is made of solid brass. Nickel plated finish.

TO DISTRIBUTORS

When this lock is shown no other will satisfy Ford car owners. It sells at sight. Our trade discounts are liberal and our proposition will interest any one that can sell high grade car protection at a moderate price. ***Write for details today.***

SCOE CARBURETOR

MAKES A FORD RUN LIKE A SIX

SAVES ITS COST IN 60 DAYS

Any dealer who puts a Scoe Carburetor on one Ford, opens for himself a neat and profitable line of business.

Simply because this carburetor enables the Ford engine to perform as nothing else can or will.

Write us to send you the Scoe on our 30 Day Trial Plan. Pay half the net—$4.25—on receipt of the carburetor. Put it on a customer's machine and check up its performance for 30 days.

Then pay the balance, or ask a refund, and we will make it without a question.

That surely is a fair offer, and hundreds of dealers have proved it so.

BRISCOE DEVICES CO.

PONTIAC, MICH.

GARDNER THERMOSTAT CARBURETOR MAKES A SWEET RUNNING FORD

By automatically varying the mixture to meet every varying temperature of the motor the "Thermostat" control of the Gardner Carburetor gives the motor at all times the correct mixture for smooth running.

No matter how cold the weather you can rest assured your Ford will start easily if it is equipped with a Gardner.

And once started, the smooth purring resulting from correct carburetion gives life and pep to the performance of your Ford. It will take the hills with a vim or throttle contentedly in crowded traffic.

All because the "Thermostat" is automatically governed by the temperature of the motor.

The fact that there is a 25 to 50% saving in gasoline is less important than the increased efficiency of the motor.

There is still some excellent territory for dealers.

Gardner Carburetor & Brass Wks.

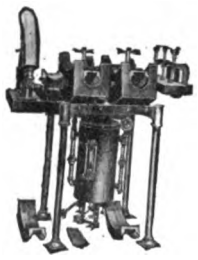
VANDERPOOLS LATEST IMPROVED PATENT APPLIED FOR RETREAD MOULDS

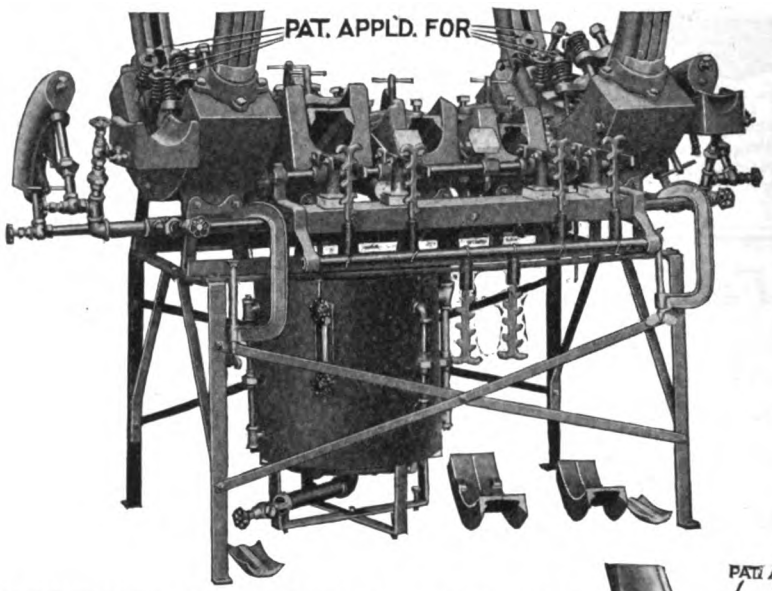
(Exit old methods.) RETREAD Our Way With Sand Bags, Better Than Air Bags.

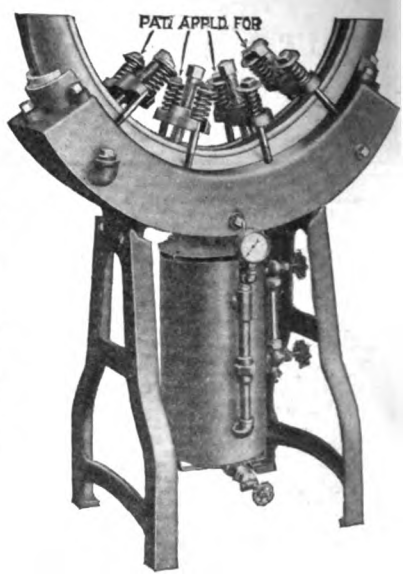
3 Cavity



2 Cavity

Single Cavity





VANDERPOOL FIVE CAVITY is the most improved Tire and Tube repair and retread Vulcanizer made, capacity about $300.00 worth of casing tube and retreading can be done with it in a day. Profit about one-half. Many are selling their old style machines and installing a VANDERPOOL FIVE CAVITY. It covers the business. It's an advertisement in your shop. It's the best to be had. We get hundreds of letters from our pleased customers. We have been making Vulcanizers for about eight years. We make Vulcanizers so they do the best work.

The patent applied for powerful springs on our retread molds forces and holds the tire down while it settles in the ribbed tread molds until Vulcanizing is complete, resulting in better retreads, overcoming separation and blisters. A better retread than with old methods. A size machine to fit most any size shop.

Send for our Tire Repair Manual, 25 cents, and price list of Vulcanizers.

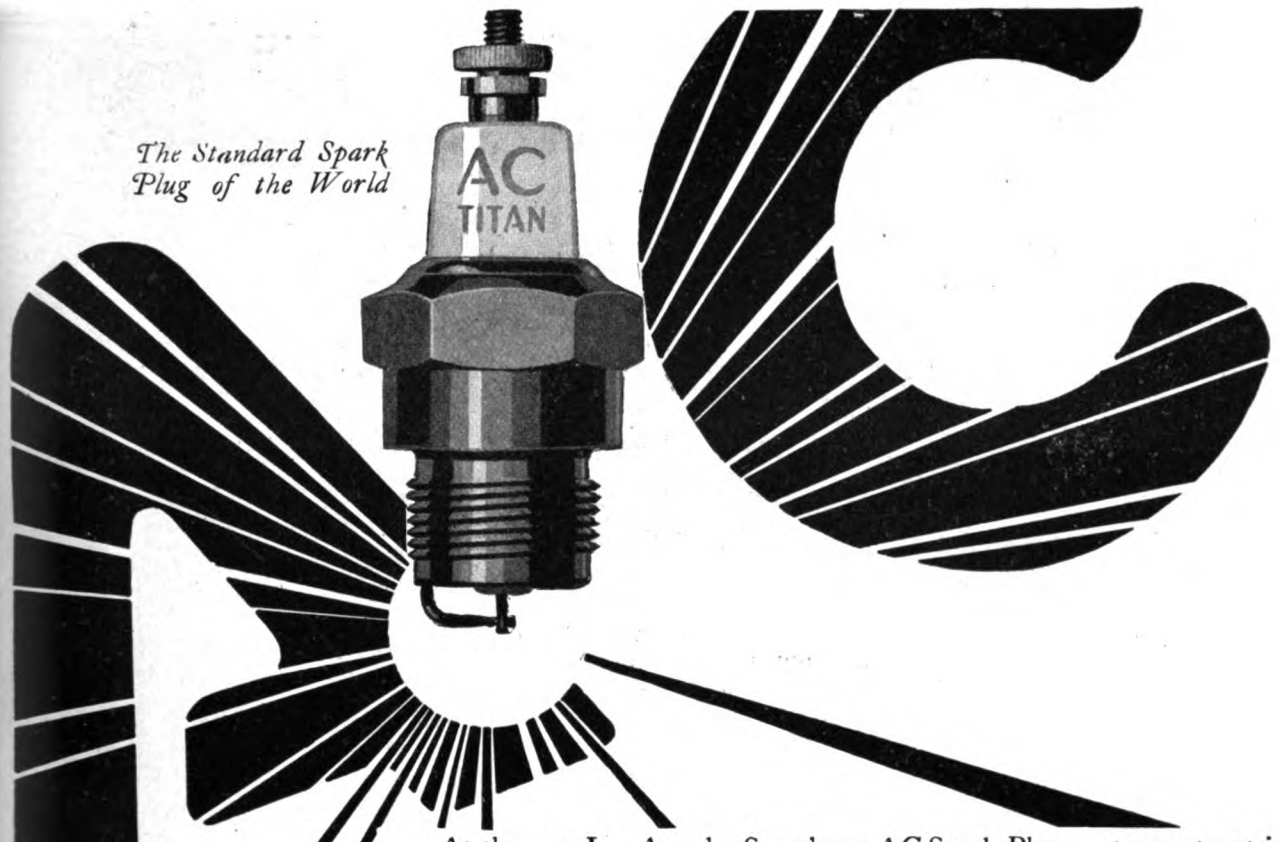
The Standard Spark Plug of the World



At the new Los Angeles Speedway, AC Spark Plugs got away to a triumphant start for another season of gruelling, competitive achievement.

They rode to non-stop victory with Jimmy Murphy and his Duesenberg in the 250-mile inaugural race of 1920.

They stood up, as AC's always stand up, under the terrific engine speeds that were essential to the average that the winning Duesenberg made—103.2 miles an hour.

AC's were the logical choice of the majority of the drivers that participated in the opening race of the 1920 season. In addition to the winning Duesenberg, the cars that finished third, fifth, sixth, seventh and ninth were sparked by AC's.

The positive assurance that their customers can ask nothing of the spark plugs they buy which these spark plugs cannot give is had only by those dealers who concentrate on the AC line.

Write today for complete dealer information.

BRUNNER

To Meet A Certain Condition

In the cramped quarters of oil stations—small vulcanizing shops or tire and accessory stores, the hum of gears may be objectionable. If so, a belt-driven, ultra-quiet, compressor outfit is the natural choice.

BRUNNER engineers have met this need by developing a special model.

No. 742 Motor-belt-driven assembled outfit is compact—complete, dependable and economical. Just fits the space available in a small establishment, and yet large enough to give satisfactory service in garages serving many cars a day. This is but one of the many BRUNNER models.

Write to-day for new catalog showing complete line of BRUNNER compressors and outfits.

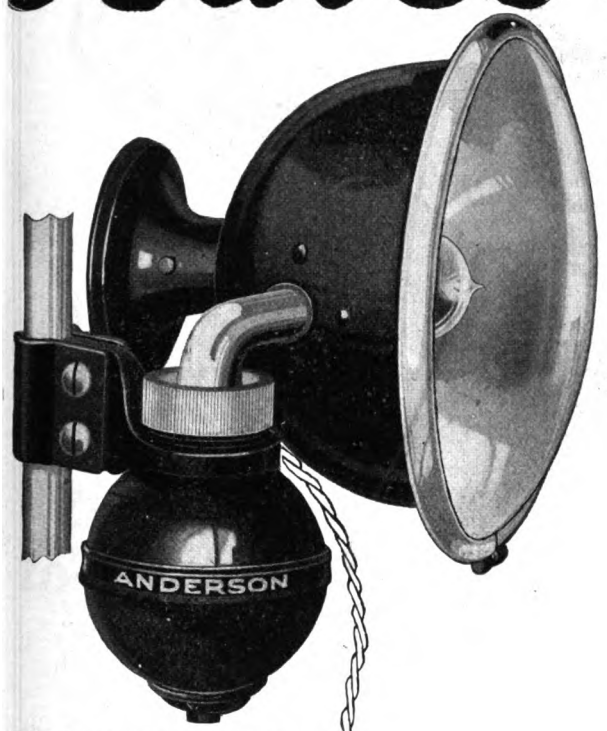
Autoreelite



The 12-foot extension cord and reel are combined in the small, neat ball casing attached to the bracket. This feature found only in the Autoreelite.

"The Spotlight With the Guarantee"

THIS "handy spotlight on a reel" carries with it the manufacturers' unqualified guarantee against defects due to poor materials or faulty workmanship.

Autoreelite makes night driving safe and sure. A spotlight, portable light and trouble light in one. Two twists of the thumb and forefinger on the knurled nut, and it can be reeled out any distance, up to 12 feet, and its powerful rays used to help "spot" and remedy motor and tire trouble.

Self-contained. No loose parts. Fits any windshield. Always ready to use.

Model B-6, 6-inch diameter, 20 C. P. lamp, with rear view mirror.....$10.00
Model B-7, 7-inch diameter, 27 C. P. lamp, with rear view mirror.....$12.00

Oro

GOOD as GOLD

—the Good Connecting Rod!

Made of the very finest steel—drop forged!

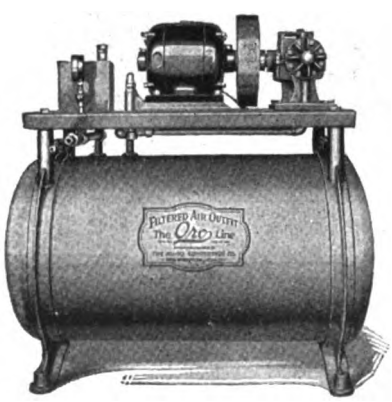
A CONNECTING Rod for Ford Cars that is made as you wish itmade—sturdy, reliable, long-lived. This rod will stand up as long as the car—eliminating all necessity for tinkering with the "underneath" part of the engine. The steel used is 30 to 40 point carbon, perfect in quality and drop forged. The babbitt is a scientific combination which gives unusual satisfaction.

This Connecting Rod, although much better than other rods, costs less than most of the others. It is economical to buy—economical to use.

The ORO Connecting Rods have been in use for many years—under all conditions—and they have proved every claim we make for them. Dealers prefer them—owners demand them. They realize the connecting rod is such an important part of an engine that only the very best quality will do.

Write us for information. We'll tell you about the ORO Connecting Rods—and also about our large line of superior automobile accessories.

We Also Manufacture "Oro" Filtered Air Outfits!



The ORO Filtered Air Compressor Outfit provides a perfect source of air—day and night—without attention from you—air that is absolutely free of oil, dust and dirt. It's a business builder—a business holder. We manufacture Au-To Air Compressors for all garages, large and small. Ask for facts about the entire line.

Cochran Piston

Mark

FOR FORD CARS

INCREASE MILEAGE 25%

n the opinion of experts who have made exhaustive tests, COCH-AN Pistons are the best grey iron pistons built—from the stand-oint of design, quality of material and workmanship.

OCHRAN pistons eliminate as nearly as possible the vibratory rces set up by the weight of the reciprocatory parts. Reducing ie weight to a minimum, and still preserving sufficient weight to nsure durability and long life, COCHRAN PISTONS are respon-ble for a smoother running motor, even at excessive engine peeds.

urthermore, the COCHRAN design, and the high quality of etal used, provide ample surface and good conductivity for trans-itting heat away from the piston.

he workmanship is exceptional—the machining so accurate that OCHRAN pistons fit exactly—not too large to lose explosion essure—and not so tight that the piston seizes the cylinder wall.

Prompt Delivery—Price $2.50

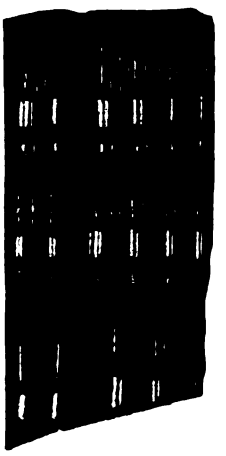
A Stock of 18,000 Armatures

This illustrates in detail the method of stocking armatures in United Motors Service Branches. This system facilitates locating of any desired armature and eliminates chances of damaging.



The combined stock of armatures carried by the Branches of United Motors Service is approximately 18,000.

Each Branch carries an average stock of 1,000 armatures of varying sizes and design.

This gives you some idea of the enormous stock of just one part which it is necessary to carry in every Branch in order to give you prompt, efficient service on Delco, Klaxon and Remy electrical equipments.

And this stock is duplicated on a smaller scale by each Authorized Distributor of United Motors Service Incorporated.

Wheel Talk Number Two

To give the intelligent motorist a better understanding of the essentials of scientific wheel design and construction is our only aim in this Series of Wheel-Talks. Science has at last been brought to the Wheels of The Motor Car and we feel that the motor car owner should have a fuller realization of what scientific wheel equipment means to the safety, economy and comfort of his motoring. A better informed motoring public means better motor car wheels. That is our only motive. Wheel Talk No. 1 sent on request.

Facts You Should Know About the Wheels of Your Motor Car

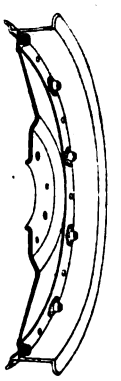
A Motor Car Wheel should be so designed and constructed that there can be no concentration of Strains at Any One Point.

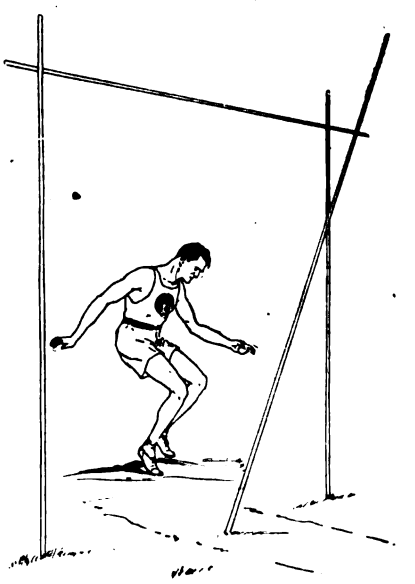
The athlete, a pole-vaulter, shown in the illustration is alighting from a height of ten feet or more. His legs are not straight. They are dished. If he keeps his legs straight, he will break his legs, because it is the direct Transmission of the Shock or Impact that shatters and destroys. You can demonstrate the soundness of this principle to your own discomfort by merely stepping off the curb-stone with your legs stiff. Instinct tells us to Offset Gravity in this way—to Diffuse the Shock.

The human body is an excellent illustration of the Principle of the Taper, the variation of Thickness and Weight. This is the Principle of the Spring. The fact that the vaulter's legs are dished to receive the Shock, too, is significant. The body is dished like a Bow—flexible, not set and rigid. That is the effect of the Dish. The body becomes an actual Spring. That is another reason why the Impact is Diffused over the Whole Body—not concentrated at any one Point.

Applied to the Wheel—The natural direction of the Strain, the Shock, the Blow is toward the Hub. Diverting the Strain, therefore, diffuses it. The Off-Set Rim in the scientifically designed wheel also makes the Strain "turn corners" and, therefore, Dissipates it.

Besides the vastly Greater Beauty of Disteel Wheels, there are these Three Basic Principles of Scientific Wheel Construction which you should demand—The Taper, The Dish, The Off-Set Rim.





Detroit Pressed Steel Company, Detroit, U. S. A.

GILL
The Perfect One Piece Piston Ring

"Here Is the Piston Ring I Recommend"

The garage man says this with an accent of pride when he holds out a Gill Piston Ring towards the customer. He knows the Gill Ring only has to be shown to convince that it is the "perfect one piece piston ring." There is no argument necessary, one look at the double step interlocking joint and anyone with even the slightest mechanical knowledge can see that it is head and shoulders above any other ring on the market.

Just think for a moment. The Gill Piston Ring allows an expansion of from $1/8$" to $3/16$" without any loss of compression and at the same time has all the advantages of a one piece ring. Made from single piece castings of the finest gray iron and machined to absolute accuracy. The easiest ring on the market to install, the easiest ring on the market to sell.

Send for the new Gill Piston Ring Size Directory, complete, convenient, and full of just the information you need. It is free to the trade.

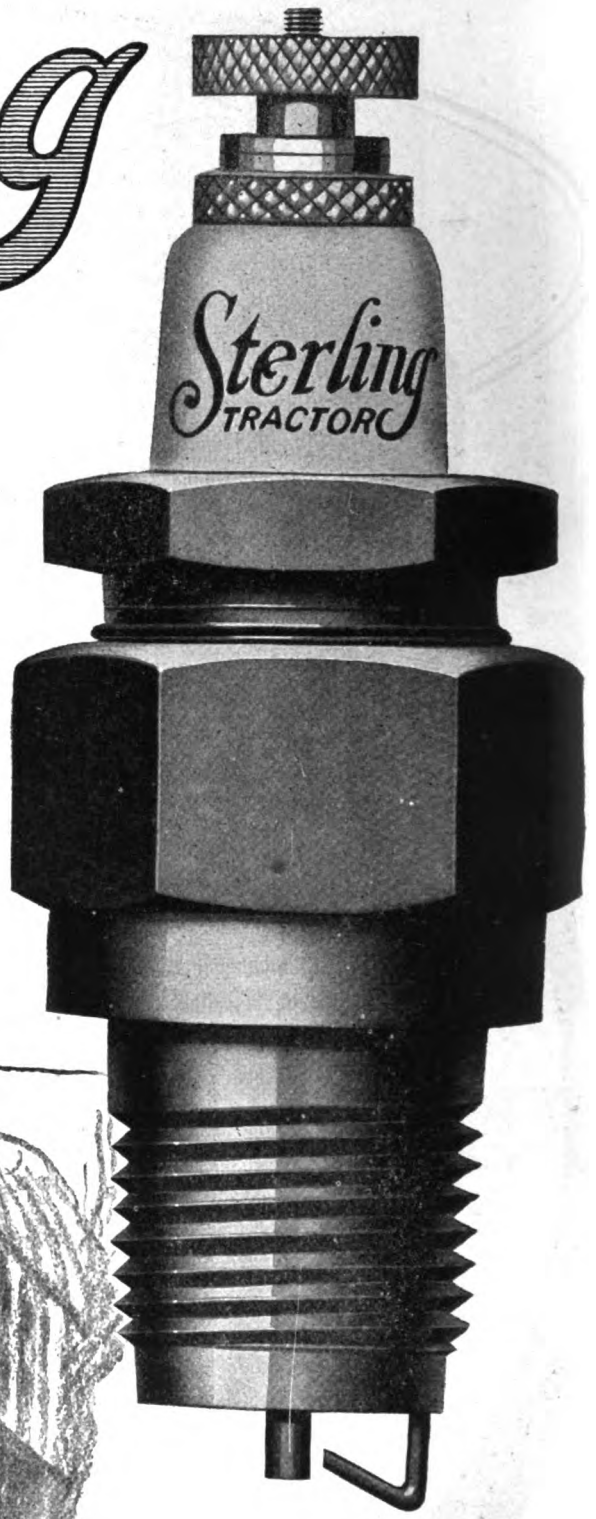
Sterling Spark Plugs



Tractor Plugs Are Best for Heavy-Duty Trucks

Loaded to capacity, yet negotiating the most difficult roads with ease, your motor truck equipped with Sterling Tractor Spark Plugs, will utilize every ounce of its power.

Sterling Tractor Plugs have been developed to meet the demands of heavy-duty motors whose intense heat shortens the life of ordinary plugs.

Motor truck owners quickly discovered that these tractor plugs, feeding a strong, steady current into the cylinders of the engine, give a greater and surer power when loads are heavy and roads rough or hilly.

Sterling Tractor Plugs are made with a porcelain core of unusual strength; an extra deep combustion chamber, and the center electrode, of monel metal, will not warp. Then, too, Sterling Plugs are separable and easily cleaned.

Garages and supply dealers everywhere sell and endorse these guaranteed plugs.

Hooven Radiator for Ford Cars.

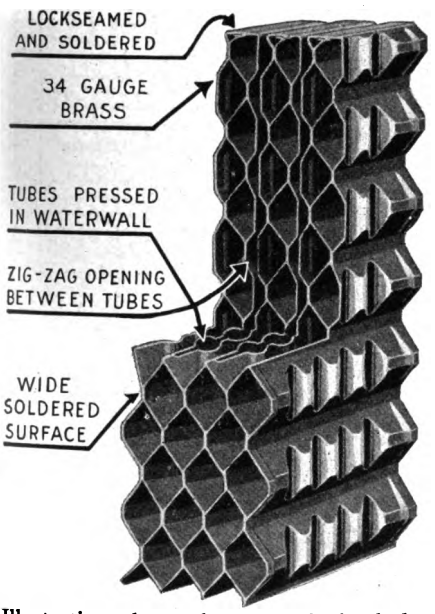

Illustration shows honeycombed-tubular construction, that gives most radiation, elasticity and strength.

The Hooven Honeycomb—Tubular For Fords

Will End Your Customer's Radiator Troubles

When your customer comes in with an engine that overheats because of poor radiation; or when he has a leaky radiator; or one that freezes up and bursts at the seams—tell him about the Hooven Honeycomb—Tubular. Put it on his car and end his radiator troubles. It will satisfy him completely and make him a steady customer.

Hoovens not only have more radiation (40% more than ordinary Ford radiators) but are stronger and lighter as well. The tubes are pressed into the honeycomb walls giving a flow of water that is even and continuous, and they won't clog. Hooven construction adds strength where strength is needed. They are trussed, like a bridge, and stay rigid as the axle.

Hoovens are made of the heaviest brass used in radiator construction—but fine design has made every ounce of it count. So that Hoovens are light as they are strong. The Hooven core has proved itself by the hardest tests—in aeroplanes, trucks and passenger cars.

Hoovens are made complete for Fords, and to fit the Manufacturers shell for DODGE, CHEVROLET AND MAXWELLS.

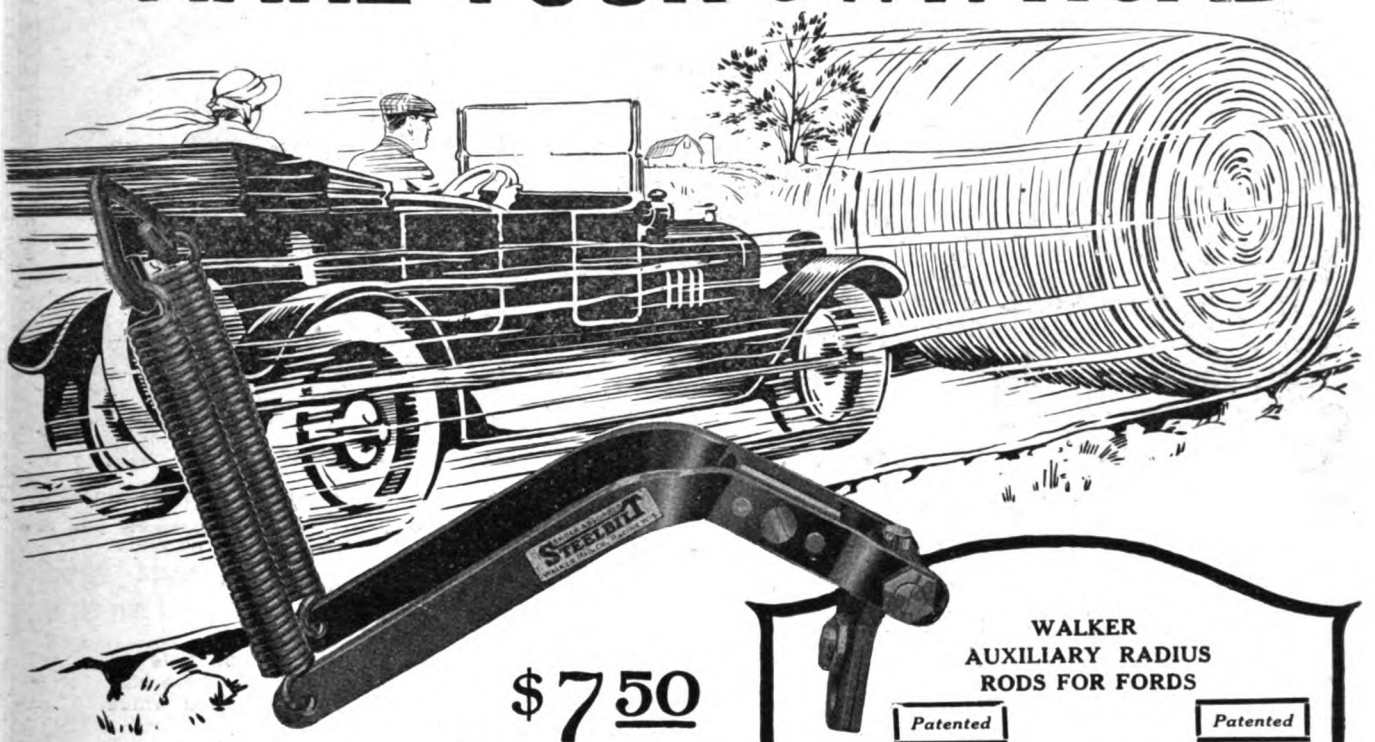
MAKE YOUR OWN ROAD



$7.50
Per Set of Four

—All roads are good roads—all travel, comfortable travel, for those who motor in a Ford equipped with a set of Walker Steel-Bilt Shock Absorbers.

Steel-Bilt Shock Absorbers really answer the purpose for which they are intended. The principle is right. Materials are right. Manufacturing methods are right. A combination of design and construction which triumphs over the shattering vibration of the meanest road a Ford ever turned a wheel on—giving a light weight car the all-satisfying riding ease of heavy machines—$5,000 car comfort at a next to nothing cost.

WALKER STEELBILT SHOCK ABSORBERS FOR FORDS

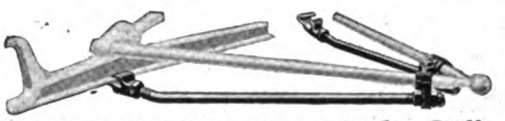
are of the famous—cantilever type. Made of steel—and only of steel. The toughest, most durable metal. No brittle, treacherous malleable parts. Neatly finished, trim, attractive in appearance. Long, lively oil tempered wire spring, never loses its elasticity. Cold, rolled steel spring bolts—automatically lubricated with oilers. No rattle. No squeak. No jolts, jars or side sways. Roughest of roads take on boulevard riding ease. Positively **indestructible. Absolutely safe. Guaranteed in every particular. Outlast car. No installation expense. Anyone can put them on in few minutes time. No holes to drill. No special tools. For Ford Touring car or Roadster. The speediest seller in the shock absorber line—most profitable—because experience of thousands of Ford owners proves them most satisfactory.**

A big positive money maker for dealers. Write now.

Walker Mfg. Co. **Racine, Wisconsin**

WALKER AUXILIARY RADIUS RODS FOR FORDS

Patented Patented



No. 701—Made of solid 3-4 in. steel rods. Malleable threaded clamps. Weight 12 lbs.

No. 702—Made of 1-in. x 1 in. x 3-16 in. Angle iron. Weight 8 lbs.

No. 703—Made of 1 in. x 1 in. x ⅛ in. Angle iron. Jointed arms. Weight 5 lbs.

No. 733—Made of 1 in. x 1 in. x 1-8 in. Angle iron. All one piece. Weight 5 lbs.

No. 704—Made of ¾ in. tubing. Malleable threaded clamp. Weight 5 lbs.

A perfected style of reinforcing rods, used in conjunction with regular Ford Radius Rod. Brace front axle. Keep it in proper alignment. Eliminate bending, twisting and breakage. Ready for instant attachment. No holes to bore. Clamp to rear of regular rod—fasten to axle using regular Ford perch bolt, except with No. 701, which clamps to front axle. No other similar appliance extends a better opportunity for profitable business. Sold by most jobbers. If yours won't supply you, write us. Be *careful*, don't buy infringements and trouble. Be certain you are getting Walker Patented Rods.

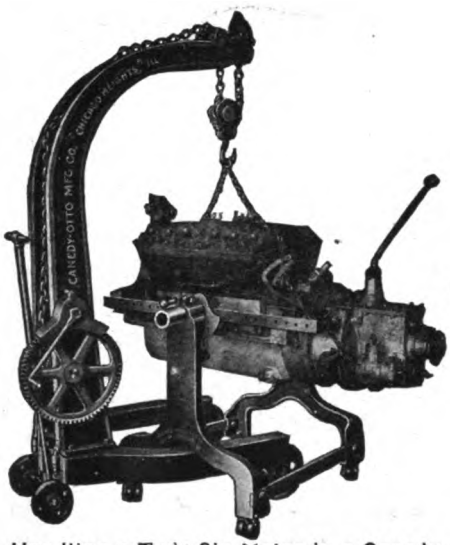
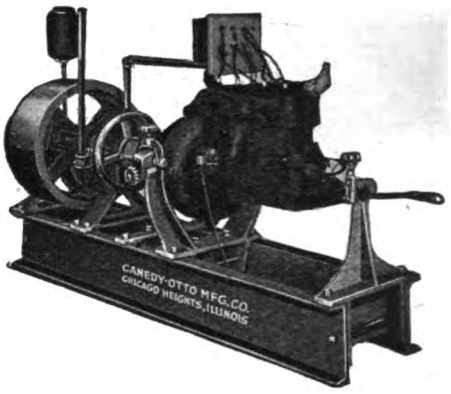
CANEDY-OTTO MFG. CO.



Handling a Twin-Six Motor in a Canedy-Otto Motor Stand with a Canedy-Otto Portable Floor Crane.

Canedy-Otto Screw Cutting Engine Lathe.



Bearing Burning-in Machines.

One of the best investments you can make. Write us today.

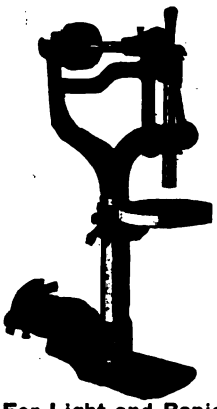
Maximum production efficiency demands absolutely dependable equipment.

For the Garage Repair Shop and Service Station

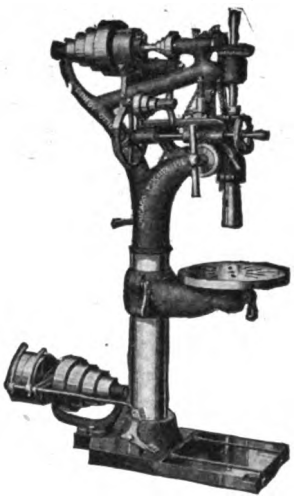
The selection of right tools answers to a large extent the problem of increased production. It is not good judgment to experiment with unknown or untried lines—confidence should be placed where confidence belongs. CANEDY-OTTO equipment represents favorably known and thoroughly tested value for durability, lasting quality, beauty of finish, and accomplishment of purpose.

Manufacturers of

Radial Drills, Sensitive Drills, Engine Lathes, Punches, Shears, Shrinkers, Counted Shafts, Upright Drills, Post and Wall Drills, Grinders, Buffers, Forges, Blowers, Tuyere Irons, Blast Gates, Bearing Burning-in Machines, Straightening Presses, Connecting Rod Straightening Jigs, Motor Test Stands, Arbor Presses, Portable Floor Crane, Piston Clamps, Rear Axle Test Stands, Tractor Tools and Special Machinery for Ford and Fordson.



For Light and Rapid Drilling.



No. 36 Canedy-Otto Power Drill.

Royal Steel Forge No. 37.

Eventually, of course; but why not now? Let us know your needs. It may pay us both to get together. Won't you start it with a letter today?

Just investigate—that's all.

Your inquiry or trial order is solicited. You will make no mistake by ordering now.

Stewart

CUSTOMBILT
WARNING SIGNAL

IT is with considerable justified pride that we can designate the Stewart line of automobile signals as the "Five Best Sellers."

They are the **best sellers,** because they are the **best signals,** regardless of price. No other signal **warns** like a Stewart. No other signal **wears** like a Stewart. No other signal **pleases** like a Stewart.

There is a model to suit every purse, purpose and person. If you are not carrying the complete line you are not getting your due share of the signal business.

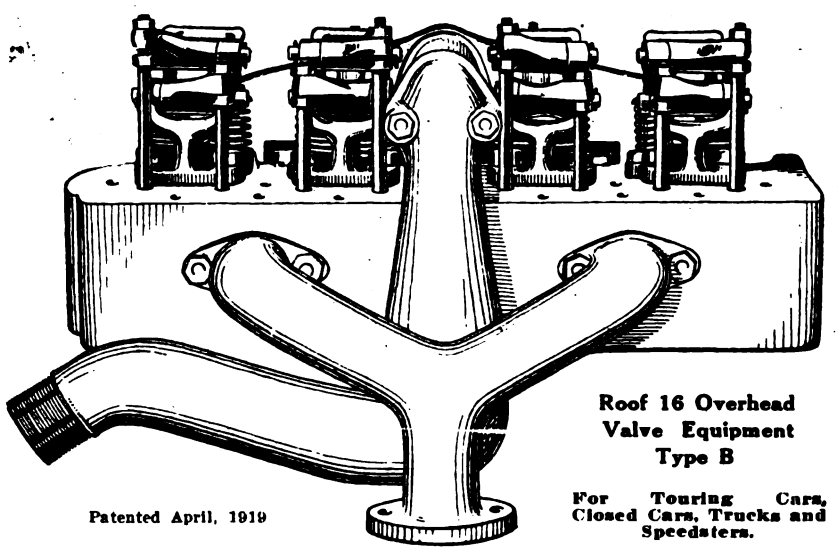
POWER and SPEED ROOF 16 OVERHEAD VALVE EQUIPMENT for FORD MOTORS



Roof 16 Overhead Valve Equipment Type B

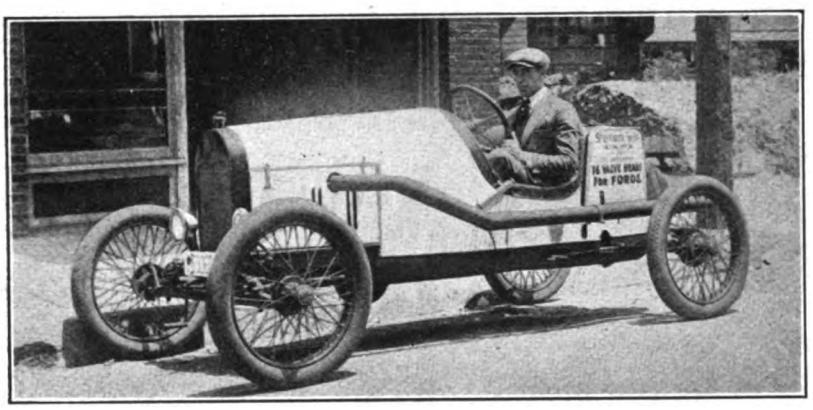
For Touring Cars, Closed Cars, Trucks and Speedsters.

Patented April, 1919

The Most Remarkable Power Device, Even in This Inventive Age

Hill climbing for touring cars—pulling power through sand and mud—doubles the hauling capacity of converted Ford truck-speed for mile and half-mile tracks to rival the fastest cars built. Ford racing cars with our Cylinder Head Equipment and special racing parts have attained speeds from 80 to 100 miles per hour. Hill climbing and pulling power for touring cars, closed cars and trucks. Price, compiete, $115.00 f. o. b. factory. Nothing extra to buy. Cylinder head equipment all ready for installation. It takes the place of the regular Ford Cylinder Head. Any mechanic can easily and quickly install it.

Comparison Brake Horse Power Tests at the United States Bureau of Standards gave Standard Ford motor with regulation carburetor 18.7 Horse Power. The same motor with 16 Valve Head and regulation carburetor 22.4 Horse Power. The same motor with 16 Valve Head and Special carburetor 29.7 Horse Power. Recent tests at Bureau of Standards with Type B gave 32 Horse Power. We are Manufacturers and Distributors of speed and other specialties for Ford cars; 3 to 1 gears, high speed camshafts, aluminite, light grey iron pistons, lynite pistons, aluminite connecting rods, racing spark plugs, racing carburetors, roller bearings, counterbalances, wire wheels, multiple speed transmission, high tension magnetos, special oiling system, special worm and gear, steering gear, racing tires, racing bodies, hood and radiator, parts for underslinging chassis. Tell us what you want. We can supply it. Racing quality. Lowest prices. Send for our Complete Literature on how to build fast cars and double the value of your converted Ford Truck and descriptive circular on Speed and other Specialties for Fords.



16 Valve equipped fast speedster of high class design and construction owned by The Speedster Shop, Los Angeles, Calif. Speed, 70 miles per hour.

Ford Racing Car Speed Kings

From the hundreds of fast Ford car drivers we mention the names of a few of those who have won laurels through the use of our equipment and some with speed records approaching that of the highest priced racing cars in the world, ranging from 70 to 97 miles per hour, and who on mile and half-mile tracks have closely approached the world's record with their speed cars:

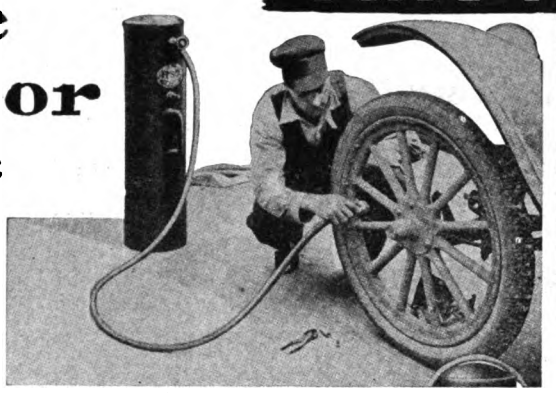
A SHORT CUT TO BIGGER PROFITS

-in the Garage or on the Road



ATSCO PORTABLE AIR TANKS for ROADSIDE REPAIR JOBS

It makes the hardest part of an emergency roadside job easy. It does away with the heart breaking, back breaking labor when a hand pump is used.

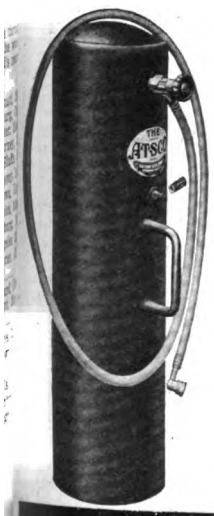
It will inflate the largest tire in seconds and all the time and labor saved is just so much added to the profit.

With an Atsco you are always equipped for any work. You can accord a service that will bring business and hold the patronage. An Atsco will pay for itself in a few jobs, and it will last for years.

The Atsco will supply air whenever wanted and wherever needed. Its utility in the garage or repair shop is constant. Anyone can use it. It is light and easily carried about and so strongly made that it will withstand the hardest abuses.

Instead of needing but one Atsco tank, many service stations and garages find use for several. This is full proof of Atsco economy in time and labor. It makes clear why every garage, repair shop and service station should use an Atsco. Where service counts an Atsco is essential.

List Price $30.00 F. O. B. Pittsburgh



Atsco tanks can be filled by any compressor system. They are 36 inches long and 10 inches diameter, constructed with genuine copper brazed seams and suitable for 250 pounds working pressure or 500 pounds test pressure.

The equipment includes a standard tire filling valve, the best pressure gauge made, a protection valve cap for filling at a compressor system connection, and an eight-foot hose, everything that is necessary.

We specialize construction of garage pressure tanks, and have in stock or build to specification tanks of any size or pressure requirements. Our tanks are used by most of the producers of compressor and air storage systems.

These tanks are genuine copper brazed construction and the seams and joints are far stronger than the stock metal. They will not crystallize or crack and are guaranteed air tight.

We make pumps and pressure tanks for all purposes.

Even if the road is as bad as this----

A SPIREX radiator will keep your Ford motor cool.

Deep mud, sticky mud gumbo, sand---will not overtax the ability of the SPIREX to keep the motor cool.

Think of what an advantage it would be to no longer be hampered by over-heating troubles---no more stopping in the middle of the road to let the motor cool. You can do away with all the annoyance of a steaming and hissing radiator---by equipping your Ford with a SPIREX.

The Ford SPIREX is absolutely guaranteed to have 42% more cooling capacity than regular Ford equipment—and there is a Special SPIREX that is guaranteed to have 67% more cooling capacity.

Make your Ford equal to the hardest road conditions by ordering a SPIREX radiator today.

Write us for more detailed information.

AN APRON THAT'S REALLY ACID PROOF

Our chemists solved a great problem when they produced "Invincible" acid-proof fabric—not only 100% acid proof, but pliable and wear proof.

INVINCIBLE ACID-APRON

Used by the largest factories in America in acid, pickling and nickel plating departments. Has withstood the most severe tests.

Furnished complete with neck tape and adjustable chain fastener for waist and in various sizes to suit your needs.

Send Coupon for sample and full information.

IBSCO AUTOMATIC BATTERY STEAMER AND STILL

A necessity in every battery station.

IBSCO Steamers and Stills are all made of spun aluminum. No seams; only aluminum and brass come in contact with water. One cell or all can be removed in from three to five minutes. Water is distilled at the rate of about a gallon an hour.

No. 1 IBSCO Steamer and Still has automatic valve. Just attach to city water and turn on. The valve does the rest.

No. 5 IBSCO hasn't the automatic valve. Must be filled by hand. Outside glass gauge shows water level at all times.

Any kind of heating plant or gas burner will operate an IBSCO.

Whistler
TRADE MARK
"IT WHISTLES WHEN ITS HAD ENOUGH"

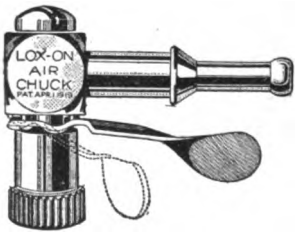
"You're Safe, Now!"

WHEN your Whistler Pressure Regulator announces *enough*, you can spin merrily along your way. No danger of blow-outs from over-inflation or give-outs from under-inflation.

The Whistler is one of the best and most convenient accessories ever invented. Simply screw it on the tire valve. Set it for the pressure desired. No worry with gauges or guesses. Every time you attach the air-hose, the Whistler gives warning when the tire pressure is O. K. You can't put any more in.

Every automobile man knows that this means a saving of 50% to 75% on tires and a correspondingly large saving in gasoline and time and trouble.

LOX-ON
TRADE MARK
AIR CHUCK
"DOESN'T RUB THE RUBBER"



For air-hose connections. Positively will not leak, even after heavy usage. Outwears a dozen ordinary chucks. Does away with the losses due to leaks, replacing rubber washers often, air pump wear and tear. Quick and easy to adjust, and guaranteed for service. $3.00 each.

Whistlers are splendid sellers. You're safe with an investment in this profitable line. Quick turnovers and generous profits are sure to come. We will be glad to write you about our advertising and dealer helps. Ask your jobber or write us. $4.00 per set of four.

CONSOLIDATED TRUCK UNIT WORKS.
2967 S. La Salle St., Chicago, Ill.

FOR SALE—BODY FACTORY.

In operation in Western City of 40,000, with large surrounding territory. Well established trade on custom and stock commercial truck bodies, also on Undertakers' hearse and ambulance bodies, buses, passenger bodies, etc. Very little competition. Prices good.
Good reason for selling. Will sell entire plant or will sell machinery, tools and material and lease buildings. Box XX Accessory & Garage Journal.

Lozier Owners—Why buy counterfeit repair parts? We have all **Original Parts.** Made from original patterns. **Order from headquarters.**

LOZIER MOTOR CO., Detroit, Mich.
Service Stations—E. A. Cornley, Inc., 1445 Bush St., San Francisco, Cal. Lozier Motor Co., 47th St. and 11th Ave., New York City.

Every Ford owner should read "Transforming the Ford." Tells how to secure smooth, positive brake action that no car can excel. A little "transforming" and your car will glide to a quick, quiet stop without the annoying, irritating clatter that you now experience. It will go into low or reverse without jumping or jerking, and you can pick up speed with all the smoothness and ease of a high-priced car. All accomplished without additional expense and the result is a clear saving of 75 per cent. in one direction alone. "Transforming the Ford" tells how it's done. Send for your copy this very minute. 10c stamps or coin. **CORMACK CO., Dept. 57, 500 Fifth Ave., New York City.**

SALESMEN AND DEALERS—A million Ford owners are waiting for you to show them the only safety steering attachment; takes that jerk out of the Ford steering wheel and makes it steer like a Packard; pays for itself in tire saving; put it on your car and dozens want it; if you have small capital and can put canvassers out to sell the owners, selling yourself to the trade, you can make a small fortune. Write today. **Saxton Auto Accessory Co., Inc., 247 Fifth Ave., New York City.**

AUTOMOTIVE MOTO

FRONT APRON FOR FORD CARS

For 1917-18-19-20 Models Only.

This apron makes a wonderful improvement in the appearance of the Ford Car, and for that reason alone is worth the cost, but it does more than that.

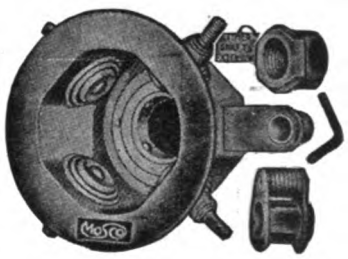
Induces a Larger Volume of Air to Pass Through Radiator.
Prevents Mud from Clogging Radiator.
Reduces Risk of Overheating.
Keeps Lamps Clean.
Prevents Vibration of Mud Guards.

Made of heavy steel, finished with two coats black enamel and baked. Furnished complete with bolts, nuts and washers. Easy to attach.

PRICE $6.50
$7.50 West of Mississippi River

IMPROVED BEMUS BALL CONTACT TIMER FOR FORD CARS

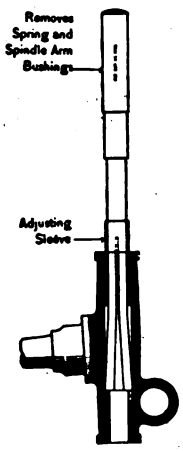
EASIER STARTING—SMOOTHER RUNNING—
LONGER LIFE—SAVES COIL POINTS—



The IDEAL TIMER for the Ford high speed, short stroke engine because form contact is the only one which is correct both electrically and mechanically. This is made by a hardened tool-steel brush coming in contact with steel balls, which are kept in proper position by means of a spring with plug on the end pressing against them. The impact of the brush causes the balls to turn so that a fresh surface is presented for each contact. The brush comes in contact only with the four balls, touching no fibre or insulation. This is a decided improvement over the ordinary type timer, where the roller is constantly wearing grooves in fibre ring which holds contacts. The balls are so located that each has a track of its own on the brush, this insuring a maximum amount of wear.

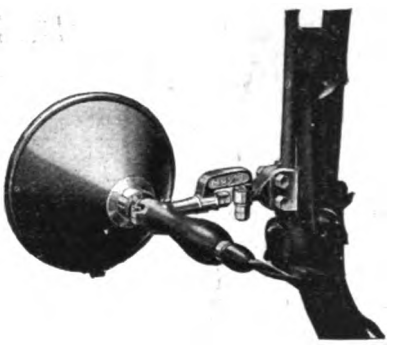
PRICE $3.00.

BEAMOLITE SPOTLIGHT



A custom made, quality equipment, strongly constructed, giving a powerful light—a light that lends dignity to any car. The bracket is of Universal type, made from non-rusting metal, heavily nickel plated and so designed and made that it "stays put" in any position.
The reflector is made of brass, silver plated, on nickel, and highly finished. It affords maximum lighting effect and can be thrown in any direction (even backward).
It can be easily and quickly removed from the bracket when there is need of a trouble lamp. The bulb can be quickly replaced by removing the rim screw.

PRICE, $15.00.



JIFFY BUSHING REMOVER

For Ford, Dodge, Dort, Chevrolet, Saxon, Overland and all Cars, Trucks and Tractors having ½" spindle bolt.

Made of steel, case hardened.
Indispensable to repairman and owner who does his own work. Pays for itself in a few minutes.
The only tool now in use that will remove steering knuckle, spindle arm and spring bushings.

PRICE $1.50.

"Built for those who demand the best."

Mud and Rain—Snow and Sleet

play havoc with the costly polish and finish of the motor car—unless it is properly cleaned and dried immediately

THE three chief reasons why an auto loses its luster after a grilling drive through the mud and sleet, are—

(1) it is not washed at all; or,

(2) it is washed without soap; or,

(3) it is washed with the wrong kind of soap.

Soap must be used to remove all the dirt, but it must be the right kind of soap. The only safe thing to do is to use a soap that has been tried and tested, and has proven its merits over a stretch of fifteen years. That soap is the Buckeye Cleanser.

It is made of pure vegetable oil, without a trace of grit or alkali, and designed especially for highly polished surfaces. It not only cleans, but also preserves and lengthens the life of the polish. It keeps the car from looking "run down at the heels."

After a hard trip, use Buckeye Cleanser, and you will be surprised —and pleased—at the results.

A Picture of Business Health

You'll never need a doctor for your business if you have a Marvel No. 5 in your shop. It is always in shape—is spack and span—ready for work. It always does a high-class job and is the greatest little money maker you ever saw. It works faster and does better work at less cost than any machine ever invented and handles any gas engine cylinder from a MOTORCYCLE TO A TRACTOR.

Marvel Cylinder Re-Boring Machine No. 5

In your shop will double your man-power—will turn wasted time into profitable hours—will establish you in the Re-boring business and show a profit on your books.
The Marvel No. 5 is power-driven—automatic—accurate and speedy. It has been endorsed by hundreds of schools and colleges and automotive repairmen.

GET THE PROFIT

There's a lot of extra money floating around in your community and you can get it with a Marvel No. 5. Think of the hundreds of owners of motor cars, trucks and tractors whose cylinders need reboring. Cash in on it. Get in shape to rebore them on a Marvel No. 5 and fit them with Marco Oversize Pistons.

MARCO PISTON SERVICE

WRITE US TODAY

We will outline our entire proposition. We will tell you what a Marvel No. 5 will do for you—Will show you the profit you can expect. We will explain how, through our Co-operative Business Building Advertising, we help bring customers to your shop and how the Marvel No. 5 will hold them.

VOL. IX. PAWTUCKET, R. I., MARCH, 1920 No. 11

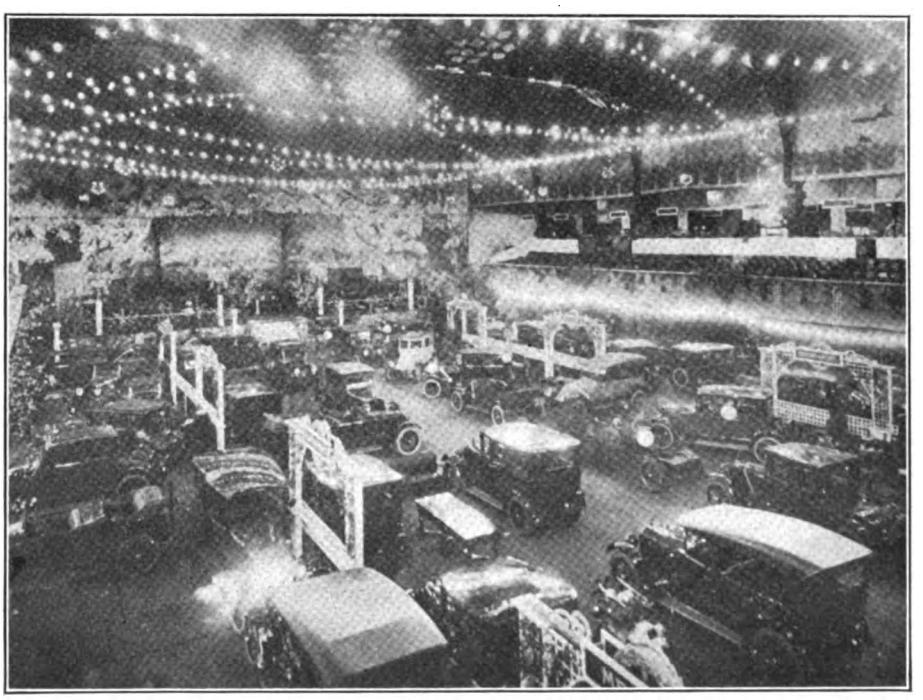
Boston Show Makes New Record for Volume of Sales

Deliveries of Cars and Trucks Is Now the Big Problem of Dealers and Manufacturers Largest Number of Machines Ever Shown Has Attracted Throng of Eager Buyers.

MEASURED by any standard the 18th annual show of the Boston Automobile Dealers' Association and the Boston Commercial Motor Vehicle Association, which was opened in Mechanics' building March 13, and which will continue until March 20, is the largest ever seen in Boston. It is larger than ever before because it has filled the well known exhibition structure and the South Armory in Irvington street, and approximately 100 applications for space were denied. Had the management been able to allot stands to all applicants the show would have included upwards of 500 separate exhibits.

Manager Chester I. Campbell, who has managed all of the Boston shows, and who has intimate knowledge of all exhibitions in which the industry has participated, maintains that the Boston show this year is by far the largest ever staged in America and were it not for the limitations of the buildings it could have been at least a third larger.

The main show is in Mechanics' building, as in previous years, and every inch of available space has been allotted. Paul Revere and Talbot halls have been given over to cars and accessories, and the cafe, which has been a feature of previous shows, has been discontinued and the area apportioned to exhibitors. The show has no displays that are not identified with the automotive industry. As a rule the spaces are smaller than ever, the endeavor of the management being to provide for as many as possible with least space that can be practically used.



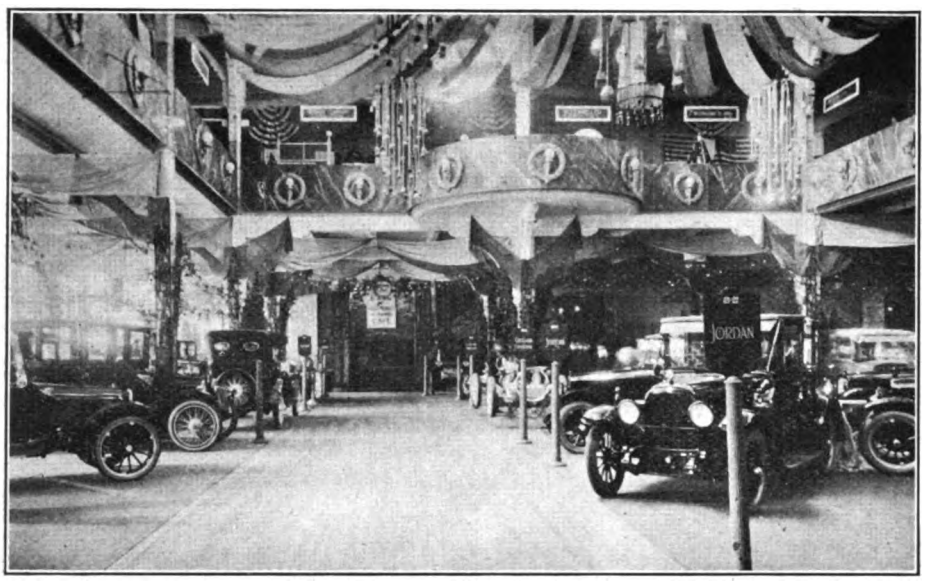
Grand Hall, the Main Division of the Passenger Car Department, Seen from the Balcony, Looking Toward the Stage.

The two associations and the Y-D club, an organization of veterans of the A. E. F., obtained the use of the South Armory, and the drill shed of this structure was divided among the early applicants for space. In the two buildings there is in use upwards of 165,000 square feet of exhibition area, which is larger than was used in either of the main shows at New York and Chicago.

Following the custom Grand and Exhibition halls in Mechanics' building are set apart for passenger cars, the basement of the building for trucks and truck parts and accessories and service station equipment, and the balcony of Grand hall and the second floor of the remainder of the structure are devoted to a few cars and to a very large number of accessories. As a whole the show in this building is better departmentized than ever before.

In the South Armory, however, the display is general, and in this the excellent judgment of the management was evident. The entire center of the floor is allotted about equally to cars and

Digitized by Google



The Main Floor of Exhibition Hall, Looking Down the East Aisle Toward the Entrance to Grand Hall, Showing Passenger Car Exhibits.

trucks, and about the walls are arranged the accessory stands, so that every visitor who circled the floor of necessity passed every exhibit. This affords equal opportunity for attention, no matter what the location. The two exhibition buildings are two short blocks apart, and equally accessible from railroad terminals and main automobile routes. The admission is by one ticket.

Cars, Trucks and Tractors.

The show includes the largest number of passenger cars ever seen in New England, there being in all 91 different makes, some of which are shown for the first time in any show, and others for the first time in New England. Of these 81 are displayed in the main building and 10 in the Armory. In the truck department are 68 different makes of machines, 48 of these being in Mechanics' building and 21 in the Armory. In addition there are nine tractors, three built for general farm work and six that are generally characterized as garden types. This makes a total of 169 different machines. Besides this there is a total of about 275 different exhibits of accessories, equipment, supplies, parts and some construction units.

The show as a whole bids fair to be wonderfully productive—in fact more productive than any previous exhibition, and the attendance has been remarkable considering the fact that a very large part of New England is yet snow bound and the remainder of the section is flooded by rivers and lakes unprecedently swollen by thawing and frequent rains.

Dealers Nearly All Over Sold.

If there is to be any forecast of the results of the show it will be that the dealers as a rule are now over sold if deliveries are to be made within a reasonable period. The exhibits made were brought to Boston with extreme difficulty and many of the dealers were compelled to pay express charges and the cost of special service to have machines intended for display delivered prior to the show. The railroads have been fearfully congested and most of them have embargoes on some classes of freight, and the machines that were brought into Boston were delivered at expense that would be prohibitive for regular transactions.

The visitors are buying, and with rare exceptions they want machines quickly. As a matter of fact the winter conditions have caused unusual wear of all cars and trucks used, and there is no question that many machines have been subjected to such hard use that they will be replaced, and this is reflected by the exceptional demand for early deliveries.

Business Has Been Good.

In practically every instance the exhibitors have found good business—in fact much better than was anticipated, and even now the factories are being bombarded with orders for machines to be shipped as quickly as possible. There is no means of determining the sales as compared with previous years, but all of the exhibitors are well satisfied, and they believe that when the exhibition ends that they will have the largest number of orders ever produced by a show. The attendance at the main building has been the largest ever recorded, and it has been better than was expected at the Armory.

The first two days the Armory exhibitors believed that they would hardly be satisfied with results, but when they realized that the visitors were present because of buying interest, and that they were not overrun and hampered by throngs that were merely curious or sightseeing, they admitted that when business was the standard for judgment they were not only surprised, but satisfied, and some went so far as to state that they would rather exhibit in the Armory than in the main building.

Exhibitors Are Well Satisfied.

With this degree of satisfaction there is reason to believe that the Boston shows in future will be in two buildings, simply because it cannot be held in one as in past years.

Because the number of exhibitors is so large and the exhibits have been carefully chosen, the show has more to interest this year than ever before. Last year the truck department was given over from the fact that the United States government was using the basement for storage purposes and the building could not be vacated, and the dealers held sales room exhibitions. These were far from satisfactory, however, and the return to the former plan of operating impelled the largest number of truck dealers ever exhibiting in Boston to apply for space.

Many Cars Shown for First Time.

The cars that were displayed for the first time in Boston included the Argonne, Cleveland, Commonwealth, Ferris, HCS, Huffman, Maibohm, Noma, Revere, R & V-Knight, Stephens and Stevens-Duryea, and in addition the Autowa Ford, the Brewster and the Renault are new; the first named being a converted Ford chassis and the last two mentioned being machines that have not

Portland Repair Men's Association

Launched upon it's sixth year of active existence, the Portland Garage and Repair Men's association boasts of a membership of more than 200 garages, repair shops and accessory concerns, while its efforts are paving the way for regional organizations in Oregon, with a state association in the offing.

In December, 1914, a group of 15 optimists banded together in an effort to eliminate many bad practises which had crept into the activity of the crafts and to supplant the feeling of suspicion and enmity with one of respect, if not friendship. All of these things have been remedied. Practically all members of the automotive crafts are welded together in an enthusiastic organization, while craftsmen and public are protected from unfairness in price and quality of workmanship.

The association publishes a trade journal, "Automotive News," which is not only mailed to all members, but is sent into every garage, repair and accessory shop in the State of Oregon. It has grown into a 32-page magazine, dealing with the problems of the frade.

The publication of this magazine has been taken over by James S. Cassell, 817 Dekum building, Portland.

ILLINOIS ASSOCIATIONS JOIN N. A. D. A.

During the last three months, 13 new automobile trade associations have joined the National Automobile Dealers' association, as follows:

Springfield Automobile Dealers' association, Jacksonville Automotive Dealers' association, Decatur Automobile Trades' association, Logan County Auto Dealers' association, Lincoln; Automotive Association of Mattoon, Galesburg Automotive Dealers' association, Quincy Automobile Trades' association, Auto Trades' asociation of Champaign county, Alton Automobile Dealers' and Accessory association, Hannibal Automobile Dealers' association, Fort Wayne Auto Trades' association and the Terra Haute Automobile Dealers' association.

ST. PAUL RETAIL TIRE DEALERS ORGANIZE.

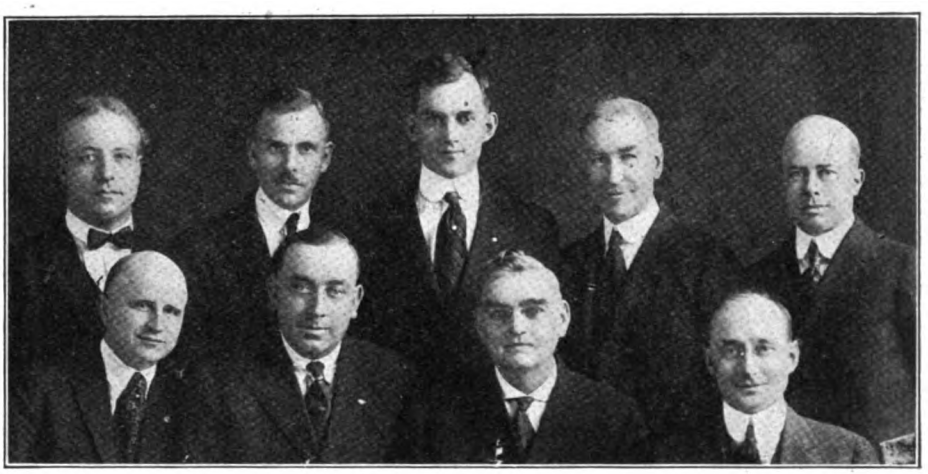
Fifty tire dealers of St. Paul, Minn wer presetn at a recent meeting called in that city to form an association of retail tire dealers. F. C. Moyer of the Goodyear Tire & Rubber Co.'s branch office at Minneapolis outlined the need of such an organization for purposes of cooperation and to maintain high business standards. Among the other speakers were E. P. Farley of Minneapolis, representing the tire association in that city; C. P. Ayres of the Goodyear branch, J. J. Coates of the Northwestern Supply Co., St. Paul; Arthur Randall of the Northwestern Tire Co., St. Paul, and William Lewis of the Firestone Tire & Rubber Co. Milton Rosen was made chairman of the committee on organization and to arrange for the second meeting.

DEALERS ORGANIZE AT DANVILLE, VA.

The automobile dealers of Danville, Va., have formed a trade organization for the mutual benefit of dealers and car owners. The officers are as follows: President, A. B. Crowell; vice presidc Charles K. Carter; secretary and treasurer, W. C. Hilderman.

INTERMOUNTAIN ASSOCIATION FORMED.

The Intermountain Automobile Dealers' Association has been organized at Salt Lake City, Ptah, embracing Utah, Northern Nevada, Southern and Central Idaho and Western Wyoming. The oficers are as follows: President, Russell Richards, Salt Lake City; vice president, Gordon Bliss, Blackfoot, Ida.; secretary-treasurer, Charles Backes, Salt Lake City. Headquarters are at 210 Judge building, Salt Lake City.



Official Family, Portland Garage and Repair Men's Association, for 1920—Top Row, Left to Right: Fred Dundee, Director; V. C. Unden, Director; Will J. Lester, President; A. N. Stanton, Director; H. M. Nisbet, Secretary. Bottom Row, Left to Right: James H. Cassell, Editor; Virgil Cooper, Vice President; A. E. Foss, Director; G. G. Gerber, Treasurer.

The association has affiliated with the National Automobile Dealers' Association, and through that organization has individual and territorial representation covering the Northwest.

DATES FOR DEALERS' CONVENTIONS.

Following are the dates set for conventions of automotive dealers in various parts of the country:

March 25, Texas Automotive Dealers' Association, Dallas; March 26, Southwestern Kansas Dea.ers' Association, Hutchinson; April 2, Columbus, O., Auto:motive Dealers' Association, Columbus; April 5, Washington Dealers' Association, Washington, D. C.

Digitized by Google

Convention of Illinois Dealers

The Illinois Automotive Dealers' Association opens in the Senate chamber of the State Capitol at Springfield at 10 o'clock Monday, March 22, with H. B. Pinkerton, state vice president of the National Automobile Dealers' Association presiding as temporary chairman. The address of welcome will be given by the president of Springfield Commercial Men's Association. Features of the meeting will include forums devoted to special interests of car, truck, accessory and tire dealers, the leaders being, respectively, Mr. Pinkerton of Peoria, Mr. Nichols of Chicago, Mr. Bass of Peoria and Mr. Sparks of Champagne, and short addresses as follows:

"The Necessity of Organization," H. B. Harper, president of the National Automobile Dealers' Association; "Dealers, Get Together," Harry G. Moock, general manager, National Automobile Dealers' Association; "Our State, Our Business, Our Association," L. A. Piel, president, Chicago Automobile Trade Association; "Automotive Merchandising," George Fritz, national field secretary, Automotive Equipment Association; "White Paint," Charles Hendy, Jr., manager, Ford Motor Co., Chicago; "Road Building from the National View Point," Pyke Johnson, Washington, D. C., representative, National Automobile Dealers' Association; "Road Building in Illinois," Henry Paulman, president, Henry Paulman & Co., Chicago; "Automobile Merchandising," Ed. S. Jordan, president, Jordan Motor Co., Cleveland, O.; "Motorization of the Farm," A. H. Kroh.

FORTY BRIDGEPORT DEALERS FORM ASSOCIATION.

The automobile dealers of Bridgeport, Conn., to the number of 40, recently assembly at the Black Rock Country Club and formed an association with the following officers: President, L. J. McCracken, Overland-McCracken Co.; temporary secretary, Louis Pawlett, Pawlett-Wilson Co.

OFFICERS OF NORTH DAKOTA DEALERS.

Following are the officers of the newly formed North Dakota Association of Automobile and Truck Dealers: President, Lee Gowell, Valley City; vice president, G. N. Kenisto, Bismarck; secretary, Harry Miller, Jamestown.

AFFILIATE WITH NATIONAL ASSOCIATION.

Among the local automobile dealer associations that have affiliated with the National Automobile Dealers' Association since Jan. 1 are the following: Detroit, Mich.; Hartford, Conn.; Providence, R. I.; Pasadena, Cal.; Worcester, Mass.; Cincinnati, O.

FORT SMITH DEALERS TO BUILD EXHIBITION BUILDING.

The fact that the Automobile and Accessory Dealers' Association of Fort Smith, Ark., was obliged to postpone its automobile show pending the completion of a privately owned building suitable to house a display of the magnitude to which the exhibition developed, has caused the inauguration of a movement to build a permanent exposition in which such events can be adequately staged.

The association passed a resolution endorsing the plan and a committee was appointed to work in conjunction with other local organizations in formulating a method of procedure in getting the movement under way.

A unique feature of the Fort Smith show will be an old fashioned auction sale of used cars. Each local dealer will furnish one car to be put on the block and it will be sold to the highest bidder without reservation.

ARKANSAS DEALERS JOIN NATIONAL ASSOCIATION.

Harry G. Moock, general manager of the National Automobile Dealers' Association, announces that the Arkansas Automobile Dealers' Association has affiliated with the national body, so that membership in the Arkansas association automatically entitles a dealer to affiliation in the National Automobile Dealers' Association.

ARIZONA AUTOMOTIVE DEALERS TO ORGANIZE.

Robert E. Magner, field secretary of the National Automobile Dealers' Association, has been at Phoenix, Ariz., to assist George H. Reuben in the organization of the Arizona Automotive Dealers' Association. Mr. Reuben has been, for three years, president of the Phoenix Dealers' Association, and is a vice president of the national association.

NEWARK DEALERS TO SUPPORT SERVICE ASSOCIATION.

Nearly 100 men in the automobile trade of Newark, N. J., had a get-together meeting recently to further the interests of the Automotive Service association of Newark. The dealers in attendance expressed themselves as heartily in favor of the association movement and expressed a willingness to support the association in its activities.

FORM FAYETTE ASSOCIATION.

The motor car dealers of Fayette county recently met at Oak Hill, W. Va., and formed the Fayette Automobile Dealers' association. The aim of the organization will be to not only bring the dealers into closer relation, but also to cooperate with citizens and officials of the county in pushing to completion and maintaining permanent roads of the section.

Virginia Dealers Are Enthusiastic

One of the features of the recent annual convention of the Virginia Automobile Dealers' Association, which was held at Richmond, Va., during the progress of the automobile show of the Richmond Automobile Trade Association, was the presence of the members of the state association at the show as the guests of the Richmond dealers.

At the convention the following officers were elected: President, J. A. Kline; vice presidents, John M. Fisher, Roanoke; W. Clyde Duval, Farmville; T. R. Toone, Norfolk; H. L. Gurrant, Danville; P. L. Bromeley, Winchester; treasurer, B. H. Rawlings; secretary, Louis Phelps.

These dealers represent nearly 600 automobile merchants in the state, who will handle a volume of business this year of $40,000,000, and were very enthusiastic as to the automobile outlook as well as to the prospect of having better roads in the state, improving automobile business as well as the value of property everywhere.

The association voted to affiliate with the National Automobile Dealers' Association. Fifty new members were admitted and the reports of the officers showed the association to be in a flourishing condition.

CEDAR RAPIDS DEALERS BOOST WATERLOO SHOW.

Following an annual custom the motor car dealers of Cedar Rapids, Ia., accompanied by a band, made a one-day visit to the automobile show at Waterloo, Ia., held under the auspices of the Blackhawk County Motor Trades Bureau. The Waterloo and Cedar Rapids dealers have the habit of visiting each association's show every year. This year the Cedar Rapids representatives were entertained at a banquet at the Galloway club by the Blackhawk organization.

FORT WAYNE DEALERS' OFFICERS.

Following are the officers of the Fort Wayne Automobile Dealers' Trade association, recently elected: President, Matt Jones; vice president, Ward Becker; secretary, C. Schiefer; treasurer, Fred Pennell. The association presented the retiring president, A. L. Randall, with a gold watch and chain. Mr. Randall has presided over the association since its organization, five years ago.

BALTIMORE ASSOCIATION IMPROVING HEADQUARTERS.

The Baltimore Automobile Dealers' Association is making extensive improvements on its headquarters at 1002 North Charles street, and when completed the association will have one of the most lavishly furnished club rooms in the South.

New Goodyear Girls' Dormitory

WITH an increase in population within the past few years of over 175 per cent., or from 60,000 to approximately 200,000, Akron, O., the rubber metropolis of the world, today is confronted by a house and room famine so a cute that it has become necessary for the city's large rubber goods and tire manufacturing concerns to undertake the construction of houses and dormitories for as many of their employees as possible. Thousands of homes now are under construction in Akron, but reports of the steady daily influx of hundreds of men to work in the rubber factories, indicate that many more thousands of homes will be needed this year before even the slightest relief can be afforded for the acuteness of the housing situation.

In addition to its extensive home building program for employees, the Goodyear Tire & Rubber Co. of Akron is paying particular attention to the task of relieving the rooming shortage for its women employees, and now has under construction a large girls' dormitory at Goodyear Heights, a new residential subdivision of Akron, located near the company's factory and main offices. Both utilitarian in purpose and architectural design, the building will provide accommodations for 192 girls, and will include reception parlors, club rooms, sewing rooms, an immense lounge and adequate space for a large dining room.

Complete in every detail the dormitory, which is expected to be ready for occupancy by June 1, will be maintained under supervision of the social service department of the Goodyear company, directed by Miss Clara Bingham. When completed it is expected to create new channels for unlimited expansion of the already extensive scope of Goodyear recreational and social service work among its women employees.

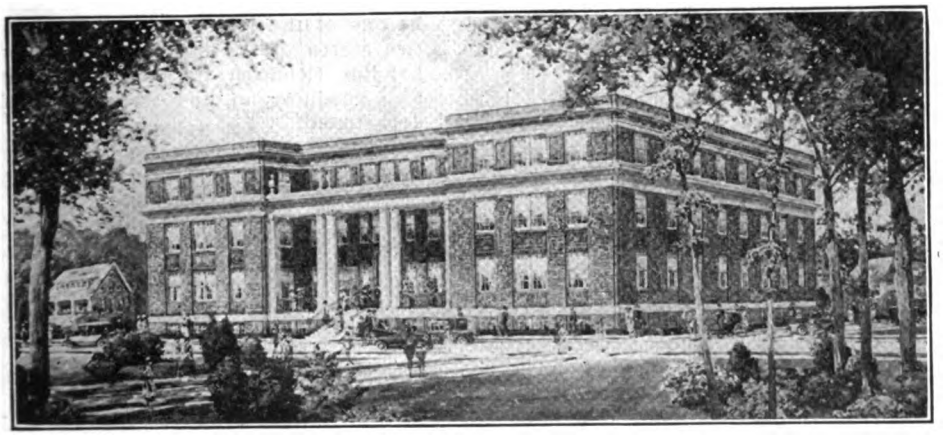
There are now 2600 women among the company's 28,800 Akron employees, 1500 in the factory and the remainder in the general and factory offices. It is planned to make the dormitory privileges accessible to both office and factory girls without discrimination, and to operate the dormitory fundamentally as a place of temporary abode for new girls coming to Akron, thus providing them with suitable homes until they can find acceptable living accommodations elsewhere in the city.

The dormitory building will be three stories high with a frontage of 125 feet and depth of 92 feet. It will be of red pressed brick with white ornamental stone facings and will include 96 sleeping rooms, each room having running water and two large wardrobe closets and being so arranged as to accommodate two girls. Leading from the main corridor on the ground floor will be the dormitory wings at either end, with an immense lounge in the center wing, also matron's headquarters and four small guest parlors. Directly above the lounge, on the second floor, will be a commodious sewing room, also reading and writing rooms. In the basement will be laundry facilities for use of the girls, and dining room accommodations.

That the Goodyear company is expending every possible effort to promote recreational and social service advantages for its women employees is shown not alone by the building of the dormitory, but by its extensive program of social service as maintained by Miss Bingham. Factory and office girls are provided with large rest rooms in both the office and factory buildings, in addition to which there are rest rooms for girls in the new $1,000,000 Goodyear club house, now nearing completion. Goodyear girls also have gymnasium privileges, private shower baths and locker rooms, a large community room and class rooms where domestic science classes are conducted for their benefit.

Goodyear office girls make use of the office lounge every Friday noon for general assemblages, at which times musical programmes are given. Departmental teas are given from 4:30 to 5:30 o'clock every Friday evening. Miss Bingham also has organized a Junior Girls' club for girls under 18 years of age, and encourages office girls taking an active part in the Goodyear Three Arts club, which has planned to present on elaborate scales both "Robin Hood" and "The Sign of the Cross" early in April.

In athletics Goodyear girls have several basketball teams and hockey teams. Deaf mute girls in Goodyear employ have their own basketball fives, characteristic "silent efficiency" having demonstrated itself in the teams' success against all opponents. Only recently Goodyear officials were persuaded to give the deaf mute factory girls an opportunity at office work. Skeptical at first, they were agreeably surprised at the high degree of efficiency and ability shown in various forms of office work by young women deprived of both the faculties of speech and hearing. To such extent have the deaf mute girls succeeded in office work that the company now has under contemplation the establishment of a business course for all deaf mute Goodyear girls.



Fine New Dormitory Being Erected at Akron, O., for Girls Employed by Goodyear Co.

PENNSYLVANIA RUBBER'S DIVIDEND.

The directors of the Pennsylvania Rubber Co., Jeannette, Pa., have declared the regular quarterly dividend of 1¾ per cent. on preferred stock and 1½ per cent. on common, payable March 31 to stockholders of record March 15.

The fire department of Detroit, Mich., after exhaustive tests, is supplanting cushion rubber tires on its motorized apparatus with pneumatic cord tires.

Digitized by Google

Republic Rubber to Increase Capital

The stockholders of the Republic Rubber Corporation, Youngstown, O., are to vote on a proposition to increase the stock of the company by $4,500,000, which would give a total of outstanding stock amounting to $20,000,000. It is proposed to issue 850,000 additional shares of common stock, bringing the total authorization of common stock up to 1,500,000 shares. President Norwood of the company states that the net business of the corporation has grown from $6,500,000 in 1916 to $16,500,000 in 1919.

HEAT INCREASE OF PRESSURE IN TIRE SMALL.

Frequent observations conducted by tire experts have demonstrated that the vast majority of motorists keep their tires under-inflated. This is really the "white plague" of the pneumatic tire. It loosens the tread from the fabric, giving it a rough, wavy appearance, that soon renders it unfit for use.

In order that the correct amount of air in tires may be readily ascertained, a standard table for all makes of tires is shown, as follows:

Rim Sizes	Inflation Pounds	Rim Sizes	Inflation Pounds
28x3	60	33x4½	70
30x3	60	34x4½	70
29x3½	60	35x4½	70
30x3½	60	36x4½	70
31x3½	60	37x4½	70
32x3½	60	38x4½	70
33x3½	60	40x4½	70
34x3½	60	42x4½	70
36x3½	60	33x5	80
32x3	70	34x5	80
34x3	70	35x5	80
30x4	70	36x5	80
31x4	70	37x5	80
32x4	70	39x5	80

C. A. Jones, Assistant Manager Mechanical Goods Department, Goodyear Co.

TWO NEW TIRE COMPANIES.

The Shenango Tire & Rubber Co. has formed at Dover, Del., with a capital of $1,000,000, for the manufacture of rubber goods. The incorporators are William F. O'Keefe, George G. Steigler and E. E. Aberle, Wilmington, Del.

The Tourist Tire and Rubber Co. has been formed at Dover, Del., with a capital of $500,000 to manufacture automobile tires. Incorporators: G. P. Felty, Pittsburgh, Pa.; F. N. Boyle and M. H. Thomas, Gerrick, Pa.

COTTON USED IN TIRE MANUFACTURE.

It is estimated that nearly four per cent. of the cotton production of the world for 1920 will be consumed in the manufacture of pneumatic automobile tires, a total consumption of approximately 400,000 bales.

The 1920 production of tires in the United States should approximate 40,000,000 to equip nearly 1,500,000 new cars and to maintain about 7,000,000 now in operation.

D. R. Burr, Manager, Mechanical Goods Department, Goodyear Co.

Cotton promises to remain indefinitely as indispensable in tire making as rubber.

Many motorists wonder how much cotton goes into the manufacture of pneumatics. Tires now contain an average of four pounds—an increase of one pound, due to the increasing number of pneumatic truck tires, which require more cotton because of their size. Much of the cotton used is Egyptian or Peruvian. The larger companies use the cream of the world's crops—the 1⅛-inch staple or better. A few of the larger companies will make more than half the year's output—the remainder will be divided among more than 230 smaller concerns.

The McClaren Rubber Co. of Charlotte, N. C., announces the appointment of the Owen Tire Co., 177 Portland stret, Boston, as the distributor of McClaren tires for New England.

Goodyear Appointments Announced

The Goodyear Tire & Rubber Co., Akron, O., has made the following promotions: I. R. Bailey, manager of the mechanical goods department, to become assistant sales manager; D. R. Burr, formerly assistant manager of the mechanical goods department, to become manager of that department, and Mr. Burr is succeeded in turn by C. A. Jones, who has been manager of the hose, railroad supplies and rubber band departments of the mechanical goods division.

I. R. Bailey, Assistant Sales Manager, Goodyear Tire & Rubber Co.

Mr. Burr has been with the Goodyear Co. since 1913, when he was assistant manager of the mechanical goods department of the Chicago district. In June, 1916, he was transferred to Akron and was made Mr. Bailey's assistant.

Mr. Jones was born and educated in Akron, joining the Goodyear forces eight years ago. Prior to that he was with other rubber concerns engaged in estimating costs on rubber specialties and as assistant in charge of production.

JOYNES TIRE CO. AT NORFOLK.

The Joynes Tire Co. of Richmond, Va., has taken possession of what is said to be one of the largest and most modern tire stores in the South. This concern handles Goodrich tires and tubes, and also conducts an up-to-date vulcanizing department.

BERGOUGNAN'S PRESIDENT ABROAD.

H. H. Coleman, president of the Bergougnan Rubber Corporation, Trenton, N. J., has sailed for France to attend the annual Bergougnan convention at Clermont-Ferrand.

L. Arthur Watkins has become identified with the Globe Tire Co., Boston, as traveling representative. Mr. Watkins was formerly a member of John & Arthur.

G. R. Loggie, President, Syracuse Rubber Co.

COTTON NOW KING IN RUBBER REALM.

According to John W. Maguire, vice president and general manager of the Portage Rubber Co., Barberton, O., in the kingdom of rubber, cotton is now king, as in Akron, the capitol of the rubber industry, interest centers not around rubber, but cotton. "In the tire industry," says Mr. Maguire, the demand for long staple cotton fabric has become a subject for deep concern. It is not generally realized that cotton is as necessary in the manufacture of automobile tires as rubber.

"An idea of the demand for cotton fabrics by tire manufacturers can be gotten when it is estimated that the 1920 tire requirement is 80,000,000 casings. When the shortage and cost of the available supply of long staple cotton fabrics is taken into consideration, there seem ample grounds for the prediction of an increase in tire prices in the near future.

"While rubber is plentiful and comparatively low in price, cotton, the real back bone of the tire industry, is scarce and costly. As cotton has risen, so rubber has fallen. The situation of a few years ago, when rubber was scarce and cotton abundant, is just reversed."

GOODYEAR EMPLOYEES PAY LARGE INCOME TAX.

No greater evidence of industrial prosperity is needed than statistics showing the number of people affected by the income tax. Of the 26,000 employees of the Goodyear Tire & Rubber Co. in Akron, O., it is estimated that 10,000 men and women made out income tax returns and will pay the government a minimum total of at least $100,000. The company's legal department has been of great assistance to these employees in filling out their income tax returns.

Syracuse Rubber Co. Producing New Syra-Cord Tire

WORD is received from Syracuse, N. Y., that the new Syra-Cord tire, manufactured by the Syracuse Rubber Co., Inc., of that city, is now well into production. The first factory unit, now complete, has a capacity of 750 tires and 1000 tubes a day. Work on a second factory unit is about to begin.

In a recent talk to some visiting distributors, G. R. Loggie, president of the concern, stated that the trade will have no difficulty in regard to factory delivery when connection has once been made with the company. "Distribution will be taken on entirely according to our production facilities," he stated. "In other words, we will not add to our distribution any faster than we increase our production."

An advertising campaign, unusually extensive for such a new concern, was announced and it will be built around the company's slogan: "Built by Cord Tire Specialists." Mr. Loggie also pointed out that W. E. Greer, factory manager of the company, is himself a specialist in cord tire building and has included in his staff some of the acknowledged expert tire builders of the largest tire factories in the country.

W. E. Greer, Factory Manager, Syracuse Rubber Co.

"The company chose Syracuse for its manufacturing center because of its close proximity to the most important purchasing points for raw materials and also because of its excellent facilities in the way of express and freight conditions," he said.

"After establishing a location we proceeded to go out and collect the best cord tire building talent we could obtain, as well as the most modern and up-to-date building equipment. Cord tire equipment is used exclusively throughout the factory."

One of the notable features of the Syra-Cord tire is said to be its universal tread, which is reported to give a positive action against skidding, as well as the easy riding and steering qualities of the ribbed tread.

In this connection it is interesting to note that F. G. Mauthe, a veteran in the tire business, has been appointed manager of sales of the Syracuse Rubber Co. In 1905 Mr. Mauthe was with the Diamond Rubber Co., where he graduated from the job of inspector to a prominent position in the western sales force. His record there led to his appointment as New York manager for the Dayton Rubber Co., which concern he left to act as eastern branch manager for Goodyear. Just prior to taking up the Syracuse proposition Mr. Mauthe was special factory representative for the Marathon Tire & Rubber Co.

HALF MILLION DOLLAR CONTRACT.

H. H. Yates, southern salesman for the India Tire & Rubber Co., Akron, O., recently placed a contract with a Texas distributor for $500,000 worth of India tires for the first six months of 1920. Mr. Yates reports that buying in the South for spring deliveries has been earlier and larger this year than ever before. This condition he attributes to the unusual prosperity throughout the great southwest and to the anticipated scarcity of all tires this spring. The opening of the season finds no huge surplus of tires made this winter because more cars have been used and more tires sold during the past few months than any previous winter season in history. There has also been little opportunity to replenish depleted war time stocks.

F. G. Mauthe, Manager of Sales, Syracuse Rubber Co.

J. N. Gunn, President, United States Tire Co.

ADDITIONS TO AMAZON RUBBER CO.'S EXECUTIVE STAFF.

In line with its announced policy of expansion and increased production in 1920, the annual meeting of the Amazon Rubber Co. of Akron, reveals important additions to the executive staff of the company, the proposed purchase of a larger manufacturing site and more than three-fold increase in the concern's capitalization.

The new officers are: President, Dr. E. E. Quirk, a prominent Akron capitalist and successful business man; vice president, Frank H. Burch; treasurer, Walter Herberich; secretary, George Hupp, who also is general manager.

The directorate includes such well known names as: Louis Schott, who started the company in 1916: Dr. Quirk, Frank H. Burch, George Hupp, Gus Burkhardt, Albert Kroehle, W. A. Boesche, M. D. Kuhlke and J. A. Berke.

The new factory site, an option on the purchase of which has been obtained, is located in East Akron on the Little Cuyahoga river, with excellent railroad facilities. Plans are being drawn up for the factory building which, it is expected, will be erected during the year. Tire production is immediately being increased from 250 to 500 tires daily, and further increases will be made as soon as the necessary equipment is available.

The capital stock is increased from $400,000 to $1,500,000, only $300,000 of which is to be sold at the present time at a par value of $100 a share.

Dr. Quirk, the new president, who several years ago left a large dental practise in order to take care of important financial affairs, is an officer in several of Akron's leading business organizations.

The Goodyear Tire Co. has purchased the plant of the Ford Motor Co. in Long Island City, N. Y. The purchase price is reported to be about $2,000,000, and it has a floor space of over 1,500,000 square feet.

Gunn Elected to Highway Board

At the recent annual meeting of the board of directors of the Lincoln Highway Association, J. N. Gunn, president of the United States Tire Co., was elected a director. Mr. Gunn was a founder of the association and has long been greatly interested in the work of the organization and his election to the board greatly strengthens its influence and broadens the scope of its activities.

Through the recommendations of Mr. Gunn and C. B. Seger of the United States Co., of which the United States Tire Co. is a subsidiary, that concern is planning to make a substantial contribution to the Lincoln Highway Association to carry out some additional plans which will be announced shortly.

FISK RUBBER CO. APPOINTS TEXAS MANAGER

The Fisk Rubber Co., New York City, has appointed, as manager of its Texas district, C. C. Fletcher, who for several years has been manager of the Oklahoma City branch.

For the past several years the Fisk Co. of Texas, now the Southern Equipment Co., handled the Fisk tire distribution for the state of Texas, and in addition, carried a complete line of accessories. On Dec. 5, 1919, the Fisk Rubber Co. of New York assumed charge of the tire division of the Fisk Co. of Texas, the Southern Equipment Co. taking over the accessory end.

The branches formerly controlled by the Fisk Co. of Texas at San Antonio, Houston and Dallas, with practically the same personnel, will be retained by the Fisk Rubber Co. of New York. With the addition of El Paso the section will be known as the Texas district.

RECENT APPOINTMENTS OF McGRAW TIRE & RUBBER CO.

The McGraw Tire & Rubber Co., Cleveland, O., recently made the following appointments:

W. H. Hurley has been appointed district manager for the eastern district, with headquarters at New York City. Mr. Hurley has been district manager in the West for the same company, with headquarters at Kansas City, Mo., and his transfer to the East is not only a promotion, but a high recognition of his managerial ability.

B. P. Davis, formerly a McGraw salesman in southern territory, has been promoted from the ranks to the managership of the company's Memphis branch. Mr. Davis has been closely connected with the tire industry in the South for several years.

E. T. Fischer has been made manager of the Denver branch. For the past decade he has been closely allied with the automotive industry in the central and western states, and previous to assuming charge of McGraw's interests in the Denver territory, represented the company in a sales capacity.

CONSIDERATIONS IN SENDING A MAN TO REPAIR SCHOOL.

In sending a man to the repair school there are some things which his firm should take into consideration before making the investment in his education. There are three attributes which a repair man in the making must possess, or he will not succeed at his calling. The first of these is a general knowledge of good business principles, that is, he should know the fundamentals of how to handle accounts, meet the public, efficiently arrange his work, etc.; second, he should be possessed of a confidence in himself—he ought to know his weak points and his good ones; and third, he should also have confidence in the product he is handling. Unless he has these three the course in the school will not supply them in any great degree, its duty being merely to educate the man in a technical way to handle every case of repairing brought to his shop.

Tire repair men and vulcanizers should not expect immediate riches after taking the course—there is nothing magic about it—hard work and application bring results and most graduates do well.

NEW OLDFIELD PNEUMATIC TRUCK TIRE.

A further demonstration of the growth of the Oldfield Tire Co., Cleveland, O., is seen in the recent announcement by President Barney Oldfield of that company that its distributors are soon to be supplied with a complete line of cord tires for commercial cars.

The Oldfield Giant cord successfully passed all tests several months ago. Except in its increased size and in details of design consequent on this, the Giant cord follows closely the characteristics of the Oldfield passenger car tires, which have become well known during the past year. The cords themselves are of the multiple type, the tread is of the familiar arrow-head type, and the tread material is zinc tempered, a factor in securing toughness which was developed through President Oldfield's racing experience.

The North American Tire Co., Sioux City, Ia., has opened a branch at Sioux Falls, S. D.

Manager Frank on Foreign Trade

That trade with Europe will soon assume many pre-war characteristics, with the added feature of being many times more brisk, is the opinion of A. C. Frank, export manager of the Firestone Tire & Rubber Co., Akron, O., who recently returned to New York City after a trip of three months in England and continental Europe.

"Although they are still suffering from the industrial difficulties which were the inevitable result of the war, the European nations will soon regain their old-time commercial aggressiveness, I believe," Mr. Frank said. "The resourcefulness they showed in the war will reassert itself in peace and they will again demonstrate their stamina by reclaiming a share of the world's trade.

"The industrial activity of Belgium is particularly noteworthy. This plucky country, undaunted by its tremendous hardships, is now rapidly placing its factories on a quantity production basis, and is doing much toward the rehabilitation of the devastated districts.

"International trade, after the resumption of European industries, should develop, I believe, to a degree heretofore considered impossible, I look for an unparalleled era of trade among all nations."

Mr. Frank believes that over-seas business holds untold possibilities for American industry.

REPRESENTATIVES APPOINTED BY EMPIRE CO.

The Empire Tire & Rubber Co., Trenton, N. J., has recently secured representation in various sections of the country, as follows:

Waverly, N. Y., Stein-Cronk Auto Co.; Buffalo, N. Y., Jaynes Auto Supply Co.; Lockport, N. Y., Jaynes Auto Supply Co.; Medina, N. Y., Jaynes Auto Supply Co.; St. Joseph, Mich., Charles E. Williams Auto Supply House; Benton Harbor, Mich., Charles E. Williams Auto Supply House; Bay City, Mich., Smallwood Tire & Repair Co.; Saginaw, Mich., Schade Tire & Repair Co.; Bluefield, W. Va., Bluefield Machine Works; Cleveland, O.; Empire Tire Sales Co.; Youngstown, O., Stambaugh-Thompson Co.; Newport, R. I., Stark Brothers; Plymouth, Mass., Plymouth Auto Sales; Woods Hole, Mass., Penzance Garage; Provincetown, Mass., Frank A. Days; Oak Bluffs, Mass., Stevensen & Lord; Penacock, N. H., Hoyt's Garage.

BERGOUGNAN TIRES SOLD IN CANADA.

The Bergougnan Tire Co., Clermont-Ferrand, France, with an American factory at Trenton, N. J., has established a branch for the province of Ontario, Canada, at 496 Yonge street, Toronto. The manager, William A. Shaw, formerly of the Columb Tires Import Co., is one of the oldest and best known tire representatives in the Dominion.

INDIA CO. MAKES TEXAS CONNECTION.

Of much interest to the tire trade is the announcement of an important distributing connection recently established in Dallas, Tex., by the India Tire & Rubber Co., Akron, O. The new concern is known as the India Tire Co. of Texas, and its territory embraces practically all of the Lone Star state. It is understood that this new distributing point immediately takes over more than a million dollars worth of the India product.

G. T. Lownsberry, widely known in the tire trade, is vice president and general manager of the India Tire Co. of Texas, with T. E. McLarty, a prominent Texas automobile man, as president of the organization. The directors include Roy Munger of the Munger Automobile Co.; Nathan Adams, a director of the American Exchange National Bank of Dallas; W. T. Herrick, a leading business man of Waco, and J. H. Langley, the Buick distributor in Texas.

The concern is located in splendid quarters at 2036 Commerce street.

NEW OFFICIALS FOR LAMBERT TIRE & RUBBER CO.

With the news of more than doubled production in the factory of the Lambert Tire & Rubber Co., Barberton, O., comes the announcement of several important changes in the organization.

H. H. Lambert, inventor of the Lambert Trouble Proof cord tire, has been re-elected president; Judge Arthur Langwith, who has large ship building interests in the northwest, is vice president and chairman of the board of directors; N. W. Coyle is vice president, a director and chairman of the finance committee; Porter E. Ramsey, for many years a prominent executive in the plant organization of the Western Union Telegraph Co., is a new director and also general superintendent of the factory.

J. H. Hausan has been re-elected secretary and treasurer, and he also temporarily replaces General Manager G. F. Fargo, who has taken over the Southern California distribution of the product. R. S. Teagle, formerly with the Biltwell Tire & Rubber Co., succeeds L. F. Neinaber as factory superintendent. The latter has taken charge of the big Minnesota distribution of Lambert tires.

GOODRICH COMPANY RE-ELECTS DIRECTORS.

At a postponed annual meeting the stockholders of the B. F. Goodrich Rubber Co., Akron, O., approved the proposal of the directors to change the common stock to no par value and to issue $30,000,000 convertible notes.

The six directors, whose term of office had expired, were re-elected to serve for three years. B. G. Work was re-elected president and chairman of the board. E. J. Raymond was elected vice chairman. W. C. Arthur, B. I. Montenyohl and L. I. Smith were elected assistant treasurers.

New Carlisle Factory at Stamford

The Carlisle Cord Tire Co., Inc., Andover, Mass., has made contracts for the erection of a tire factory at Stamford, Conn., on land owned by the company, located on Fairfield avenue, overlooking Long Island sound.

The Carlisle Cord Tire Co. manufactures a pneumatic cord tire under its own patented process which is stated to effect a substantial saving in the cost of raw material. The concern is headed by J. M. Gilbert, formerly vice president of the United States Tire Co., and associated with him on the board of directors are a number of successful business men experienced in the automotive industry. Charles S. Glover, vice president of the American Hardware Corporation of New Britain, Conn., is also a director.

The Carlisle Co., which is now manufacturing at Andover, Mass., will move all of its equipment to Stamford as soon as the plant is erected, which will be about June 1 of this year. The corporation plans to increase its production to 1000 tires a day by the end of this year, and the property which it owns at Stamford will take care of manufacturing units having a total capacity of 4000 tires a day. This production of tires would give employment to approximately 1500 men.

FISK RUBBER CO. BUYS NEW YORK PROPERTY.

The Fisk Rubber Co. of New York City has increased its holdings on West 57th street in the Metropolis by the purchase of the St. Augustine, a seven-story apartment house on the northeast corner of Eighth avenue. This property occupies a plot 50.5 by 90 feet and the value was placed at $600,000.

This purchase completes possession on the part of the Fisk Co. of the block fronting on the southerly side of 57th street from Broadway to Eighth avenue.

The combined properties of the Fisk Co. comprise a frontage of 250.11 feet on 57th street, 100.5 feet on Eighth avenue and 54.9 feet on Broadway, which area was accumulated for development with a 24-story store and office building, the bulk of which will be occupied by the owners.

Its completion will represent an investment of approximately $2,350,000 for the land and probably as much more for the building, plans for which have been completed by Fred T. Ley & Co., who have the contract for the erection of the structure.

REGAL CO. AT SHERBROOKE.

The Regal Tire & Rubber Co., Ltd., has been incorporated at Sherbrooke, P. Q., Canada, to manufacture and deal in tires and rubber goods. Its capital is $750,000.

Personal News of Industry and Trade

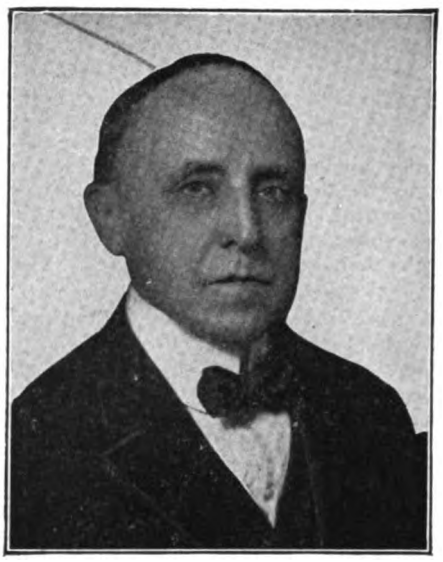
Harold McGill Davis Dead

Harold McGill Davis, who for about 20 years had held the position as manager of the advertising department of the Sprague Electric Works of the General Electric Co., died Feb. 9 at his home in Brooklyn, N. Y., after a short illness, aged 59 years. He was a native of Jerseyville, Ill., and was educated in the public school of that section. He was appointed chief clerk in the St. Louis United States assay office by President Arthur, but after several years service resigned and went to New York City to study architecture. In 1893 he entered the advertising profession, and for four years was advertising manager of a trade paper in the Metropolis, afterwards becoming connected with an advertising agency, thus broadening his experience and fitting him for his final position with the Sprague works, which he obtained in December, 1899. He had marked ability as a designer and writer, which was manifest not only in his professional field, but in more general literary work. He leaves a wife and daughter.

R. H. Townsend, Made Chief Engineer of the Hooven Radiator Co.

R. H. Townsend, for the past six years general construction superintendent for the L. H. Nunn interests, is now with the Hooven Radiator Co., Chicago. Ill., in the capacity of chief engineer, for which position he is well qualified through his thorough technical training and wide industrial experience.

Charles Ethan Allen was recently appointed general manager of the Eisemann Magneto Corporation, succeeding W. E. Steinback, resigned. Mr. Davis is a graduate of Worcester Polytechnic Institute and after spending several years as a construction engineer in Hartford, Conn., and Chicago, he became sales manager of the Pratt & Whitney Co., Hartford, and later factory manager of the Illinois Sewing Machine Co. Other activities of Mr. Davis in this field have included the positions of works manager and later general manager of the American Locomotive Co., general manager of the Warner Gear Co., manager of the Walco Co.. general manager of the Simplex Automobile Co. and member of the technical section of the Army War Claims board at Washington, D. C.



Charles Ethan Davis, New General Manager of the Eisemann Magneto Co.

George W. Pontius, Jr., who recently became service manager for the Cleveland Tractor Co., Cleveland, O., is making a tour in Europe to arrange for the extension of the service organization of the Cleveland company in the various continental countries. Mr. Pontius was in charge of the service department of the Studebaker Corporation when during the war he entered the transport corps of the United States army and upon his discharge joined the Tractor company.

George W. Pontius, Jr., Service Manager of the Cleveland Tractor Co.

Rugg and Robbins with Westinghouse

W. S. Rugg and Charles Robbins have been appointed by the Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa., as assistants to the vice president of that concern. Mr. Rugg was born at Broadhead, Mich., and is a graduate of Cornell university. His connection with Westinghouse goes back to the earlier days of its development. Soon after he joined the company he was transferred from Pittsburgh to Chicago, and in 1901 went to New York as a special engineer, where eight years later he was made the manager of that office. In 1917 he was recalled to East Pittsburgh to take charge of the railway department, where in 1918 he was also made manager of the newly created marine department. Mr. Robbins began his connection with the Westinghouse company in 1899 at the New York office. In 1906 he was transferred to the main offices at East Pittsburgh as assistant to the manager of the industrial and power departments. He was appointed manager of the industrial sales department in 1910. In August, 1915, he was made assistant sales manager of the company.

Jay Dewey, Director of Sales, Lexington Motor Co.

F. R. Humpage, who for years has been prominent in the automobile industry, including important connections with the Packard Motor Car Co. and the Dyneto Electric Co., has resigned his position as vice president and general manager of the Wilt Twist Drill Co. of Canada, Ltd., located at Walkerville, Ont., on account of continued ill health.

Jay Dewey is now director of sales for the Lexington Motor Co.. Connersville, Ind., being promoted from manager of the Lexington branch at Kansas City, Mo.

Brown Becomes Hyatt Bearings Manager

Horace A. Brown, Jr., who has been identified with the Hyatt Roller Bearing Co., Detroit, Mich., for the past 19 years, has been promoted to be manager of the Motor Bearings division, with headquarters at Detroit. Mr. Brown received his technical education at Stevens institute, and began his professional career as draftsman and assistant engineer with the Atlas Portland Cement Co., later becoming assistant engineer of an Edison power station. He joined the Hyatt Roller Bearing Co. at Harrison, N. J., in 1901, as assistant to the secretary and sales manager, and with the exception of about a year and a half spent with a prominent high-speed tool company, he has been with the Hyatt organization ever since. He first went to Detroit in 1909 and became chief assistant to B. G. Koether in 1911 and has held successively the positions of senior sales engineer, manager of the sales department and sales manager, from which position he has just been promoted. He is a member of the Detroit Athletic club, Detroit Board of Commerce, Detroit Automobile club, Society of Automotive Engineers, and is also a member of the Masonic bodies of New Jersey and a permanent visiting member of Palestine lodge, Detroit.

Horace A. Brown, Jr., Manager Motor Bearings Division, Hyatt Bearing Co.

George Harrison Phelps, director of advertising for Dodge Brothers, Detroit, has collected 50 of his best stories, which were originally published in a house organ of Dodge Brothers, and they have been published in attractive book form under the suggestive title of "Go," by Reilly & Lee Co., Chicago.

Marshall E. Lebon and Alfred V. Kidd, members of the Kidd-Lebon Co., distributor of the Republic truck in Boston, have moved into the new building leased by them at 983 Commonwealth avenue, that city.

C. P. Hand, President, Burd High Compression Ring Co.

B. G. Koether, after 18 years of service with the Hyatt Roller Bearing Co., Detroit, Mich., has been made vice president and will make his headquarters at Harrison, N. J., as head of the entire sales and advertising departments of the company. He entered the employ of the Hyatt Co. as an accountant, and successively held the positions of purchasing agent, assistant sales manager, sales manager and head of the motor bearings division. He is a member of the Detroit Automobile club, the Detroit board of commerce and the Detroit section of the Society of Automotive Engineers. He has also been editor of the Quieterion, the house organ of the Hyatt Roller Bearing Co.

John D. Howley, branch manager of the White Co., Philadelphia, is looking after the removal of his company from 216 North Broad street to the fourth floor of the Fidelity Mutual building, 112 North Broad street.

B. G. Koether, Vice President, Hyatt Roller Bearing Co.

Wood Vice President Van Cortlandt

W. A. Woods, vice president of the Van Cortlandt Vehicle Corporation, metropolitan distributor for Peerless eight-cylinder motor cars, has been elected by the National Automobile Dealers' association as director of the eastern district. Mr. Woods was also elected a member of the executive committee of the association, consisting of three members, to represent the grand eastern division, which includes New York, Pennsylvania, New Jersey, Maryland, Delaware and the New England states. A still further honor accorded Mr. Woods was his recent election as vice president of the Automobile Dealers' association of New York City.

A. H. Sowers has dissolved the Jackson Motor Car Co. of New England, which has been engaged in the automobile field in Boston for several years, and has formed a new company known as the Jackson Motor Service Co., which will specialize in repair work and replacement of parts on the Jackson and Lexington cars, doing business on Washington street in the Brighton district.

W. A. Woods, Vice President, Van Cortlandt Vehicle Corporation.

Merton H. Schwartz and Benjamin H. Wells, who were for some time associated with the firm of Mason B. Hatch, Inc., Buffalo, N. Y., have organized the Schwartz Motor Corporation in Niagara Falls and will handle Cleveland and Chandler cars in Niagara county.

George W. Hunsicker of Allentown, Pa., who retired a month ago as president of the Lehigh Auto Trade association, in which capacity he managed a number of successful automobile shows, is dead, aged 46 years. Mr. Hunsicker was president of the Dietrich Motor Car Co., one of the pioneer automobile dealers of the Lehigh valley, and was an ardent good roads advocate.

Edward Stern has leased the first floor of the building at 1430 Vine street, Philadelphia, for an automobile sales room.

Lincoln Highway Loses Seiberling

F. A. Seiberling, head of the Goodyear Tire & Rubber Co., has been obliged, on account of the increased activities of that concern, to resign his office as president of the Lincoln Highway association, and will be succeeded by H. B. Joy. Mr. Seiberling reported that during 1919 the amount expended on the highway exceeded $9,000,000, and that 1920 will see an equal or greater sum spent to put this great transcontinental road into permanent shape.

William Krafve is the designer and production manager of the Capitol motor truck, made by the Capitol Motors Corporation, Fall River, Mass., and exhibited for the first time at the Boston show. Mr. Krafve is a native of Sweden, but came to this country when he was four years of age. He has been associated with the automotive industry for the past 21 years, being at different times

William Krafve, Designer and Production Manager, Capitol Motor Truck Co.

and in various capacities connected with the Cadillac, Buick, Regal, Koehler, Republic and Ohio Motor car concerns.

Frank L. Johnson. sales promotion manager for the Service Motor Truck Co., Wabash, Ind., died recently in that city after a brief illness. He joined the Service company in June, 1919, shortly after his discharge from service in the Marine Corps of the United States navy, and his brief career with the company was such as to promise a brilliant future.

F. B. Hutchinson, Jr., manager of the Iron City Motors Co., 2337 Michigan avenue, Chicago, has consummated a deal whereby his company becomes the Chicago representative of the Elcar, which line will be handled in conjunction with the King Eight.

James Joyce, Jr., has resigned his position as vice president and general manager of the Dreadnaught Tire & Rubber Co.

Harry O. Foskett, Sales Manager Merchants' Motors, Inc., New England Distributor of Acason Trucks.

Harry S. Foskett is sales manager of Merchants Motors, Inc., 584 Commonwealth avenue, Boston, distributor for eastern Massachusetts of the Acason truck built by the Acason Motor Truck Co., Detroit, Mich. He is a native of Jackson, Mich., and has a fine record for salesmanship in the commercial motor vehicle field. He is proving an efficient assistant in the sales department to President Charles S. Davis of Merchants Motors, Inc.

Jack R. Kearns is service manager of the Penn-American Motor Car Co., distributor of the American Balanced Six car in Philadelphia, which has moved into new quarters on Auto row, 252-254 North Broad street, where sales rooms and service department will be combined.

William L. Edmond has resigned his position as cashier of the First State Bank & Trust Co., Waco, Tex., and has associated himself with G. H. and H. L. Penland.

Frank L. Johnson, Sales Promotion Manager, Service Motor Truck Co.

Barrere Represents Haynes Co.

Leonide Barrere, an automobile exporter and engineer of international repute, has been engaged by the Haynes Automobile Co., Kokomo, Ind., as special traveling export representative. Mr. Barrere, after a month's stay at the Haynes factory, will start on a three years' journey, during the course of which he will visit all of the important cities of the world, including points on the European continent, Asia, Africa, India and South America. Mr. Barrere is a graduate of the Institute Technologique et de Mechanique Applique, Nancy, France, and has received degrees as an electrical, civil and mechanical engineer in both German and Russian universities. In addition to this he is a graduate of the Academy of Commerce at Odessa, Russia. He has been engaged in export work in Europe since 1910 and was associated with European automobile firms

Charles E. Stuart, Assistant Sales Manager, Selden Truck Corp.

for five years. Coming to this country four years ago, he has trained himself to a high degree in American methods in regard to the automotive industry. His mission with the Haynes company will be to establish foreign dealers, to educate the motor car public of foreign countries in the matter of the left-hand drive and to stimulate general interest in all quarters of the globe in the high character of the Haynes cars.

Charles E. Stuart, who has recently been appointed by Vice President Hal T. Boulden as assistant sales manager of the Selden Truck Corporation, Rochester, N. Y., has had a ripe experience in the motor vehicle trade as salesman, dealer and field sales manager.

Howard W. French who, during the war was with the United States aerial service recently resigned his commission to become sales manager of the Apperson Baltimore Co.

Torbensen Axle Co's Executives

The association of three new executives in the production division of the Torbensen Axle Co., Cleveland, O., is announced by Vice President Robert Enos, which is expected to considerably strengthen the manufacturing organization of the company.

J. D. Smith, Manufacturing Manager, Torbensen Axle Co.

These are J. D. Smith, as manufacturing manager, who was formerly with the Timken Detroit Axle Co., as works manager; G. W. Veale, formerly production supervisor for the Timken-Detroit company, to be production superintendent, and G. W. Carlson, engineer, formerly with the Timken company, who will serve in the same capacity.

All have served in the axle industry for years and have become known for their capacity in their several specialties, and their united endeavors will no doubt materially promote the activities of the Torbensen plant.

WILLYS-OVERLAND STRIKE OFFICIALLY ENDED.

At a special meeting of the Toledo, O., chapter of the International Association of Machinists, recently held, a vote was taken to voluntarily and officially end the strike which was started at the Toledo plant of the Willys-Overland Co. last May, and it is understood that the company has been placed on the union fair list by the Toledo labor organizations.

At the time of this action more than 14,000 men were at work in the Toledo plant and about 4000 more at the Elmira, N. Y., and Elyria, O., plants of the Willys-Overland Co. A large majority of the members of the machinists', metal polishers and pattern workers' unions had returned to work several months ago.

The early return of the large majority of employees confirmed the company's contention that its wages, hours, working conditions and other elements involved were on a par with, if they were not actually better, than similar conditions in other automobile plants throughout the country. It is generally conceded that the strike was called at the instigation of a radical element, which had secured control of the Toledo trades.

MAIBOHM MOTORS INCREASES DIVIDENDS.

The Maibohm Motors Co., Sandusky, O., at its annual meeting, Feb. 16, increased its annual dividend rate from six to eight per cent. A regular quarterly cash dividend of two per cent. was declared, payable April 1 to stockholders of record March 15. The stockholders also authorized an increase of capital from 150.000 to 250,000 shares.

It is planned to use the proceeds of this subscription for the immediate construction of additional manufacturing facilities which will more than double the present production capacity. The company reports an insistently increasing demand for its product in all domestic as well as foreign markets.

G. W. Veale, Production Superintendent, Torbensen Axle Co.

The present production schedule is at the rate of 25 cars a day, approximately 15 per cent. of which are exported.

INCREASE IN PRICE OF FORD CARS.

The Ford Motor Co., Detroit, Mich., put into effect on March 3, advances in prices on the various Ford models. The new schedule is as follows:

Runabout, $550; runabout with starter, $625; touring car, $575; touring car with starter, $625; truck chassis, $640; coupelet with starter and demountable rims, $850; sedan with starter and demountables, $975; Fordson tractor, $800.

All prices are f. o. b. Detroit.

Motorists Contribute to Roads

The sum of $65,522,259 was contributed in 1919 by passenger car and truck owners of America towards good roads. This represents money received from license fees from the various states. Highway authorities say that over 90 per cent. of this amount goes back into good roads work.

The 1919 total transcends that of 1918 by $15,000,000—enough money to construct a 500-mile commercial highway. Approximately one-fourth of the national total was paid by car owners of three states: New York, Pennsylvania and California. It is significant that these states have excellent highway systems and are now in the midst of comprehensive plans for the future.

In this connection it is interesting to note the lack of uniformity in the various state license fees laws. For instance, although West Virginia possesses fewer cars than Alabama by 12,000, the former state realizes $424,000 more in license fees. Again, North Carolina and South Dakota people own approximately the same number of cars and trucks—in the neighborhood of 100,000—but the southern state's laws return four times the amount of money for good roads work as does her sister state in the northwest. North Carolina license fees amounted to $1,280,000. South Dakota paid $300,000.

CASTEEL & VAN DORAN GARAGE.

Casteel & Van Doran, White Cloud, Kan., has an up-to-date and well equipped garage, at which is carried a full line of Ford parts. It is also agent for the Dort car and sells the Gates Double-Mileage tires and tested tubes. The plant is to be enlarged this spring by an addition 46 by 50 feet. William Van Doran is the general manager and G. D. Casteel the master mechanic.

G. W. Carlson, Engineer, Torbensen Axle Co.

J. F. Hernberg, Manager Truck Department, Paige-Detroit Co. of New England.

J. F. Hernberg is in charge of the truck department of the Paige-Detroit Co. of New England, with headquarters in Boston. Mr. Hernberg is a native of the great west and brought a large amount of characteristic optimism with him in assuming his activities in the eastern field. The Paige truck is built in 1½, 2½ and 3½-ton capacities, but Mr. Hernberg states that it is the 1½-ton size that is making the greatest appeal to the New England trade, as this is especially designed with several styles of bodies for the farmer and truck gardener, as well as for light delivery.

Arthur H. Story, for the last 15 years well known in Philadelphia newspaper advertising circles, has resigned from the Philadelphia Record to become general manager and sales manager of the Keystone Automobile Sales Corporation, 668-670 North Broad street, distributor of the King and Maibohm lines. Frank K. Stehle is president and treasurer and Remy Stehle manager of service of the Keystone Co.

K. P. Drysdale has become associated with the advertising firm of Theodore F. MacManus, Inc., Detroit. He was for 12 years with the Cadillac Motor Car Co., the first two as assistant sales manager and the last 10 as advertising manager. He was later with the Cleveland Tractor Co. as director of sales promotion. He is widely known for his extensive research work in his chosen field, covering some 20 odd years in various lines of merchandising.

Frank E. Wing, New England distributor of Marmon cars, with headquarters at Boston, increased the number of his branches recently by the establishment of a store at Springfield, Mass., in charge of T. A. Earl, formerly of the Franklin Co, Boston. Mr. Wing now has branches in Worcester, Providence and Springfield, in addition to the main offices at Boston.

S. W. Creekmore has been elected president of the Creekmore Motor Co., Fort Smith, Ark.

Ellis Manager Boston Splitdorf Co.

Robert M. Ellis, well known in automobile trade circles of the East, has assumed the management of the Splitdorf Electrical Co. of Boston, succeeding Harry R. Curtiss, who has been appointed manager and treasurer of the Excelsior General Supplies Co. of Chicago. For the past two years Mr. Ellis has been export manager of the Splitdorf Electrical Co. of New York, and before that was with the Bi-Motor Equipment Co. of Boston, eventually being placed in the position of manager of that company. In returning to Boston he assumes also the duties of treasurer and a director, as well as manager of the Splitdorf Electrical Co.

George W. Twitmeyer, sales and advertising manager of the Stevens-Duryea Co., died Feb. 10 at a hospital in Los Angeles, Cal., from pneumonia, complicated with spinal meningitis. He attended the national automobile show at Chicago and was taken ill en route for California. Mr. Twitmeyer was for many years advertising manager of the Peerless Motor Car Co., Cleveland, O.

Robert M. Ellis, Manager, Treasurer and Director, Splitdorf Electrical Co. of Boston.

William H. Knoche, one of five brothers engaged in the automobile and oil business at Lombard and Ninth streets, Baltimore, Md., has died as the result of burns received eight weeks ago caused by a gasoline explosion at his place of business.

George W. Canterbury, who has just taken possession of new sales and service quarters at 967-969 Commonwealth avenue, Boston, has become distributor in eastern New England of the new Stevens-Duryea car, which is being manufactured by the Stevens-Duryea Co., Chicopee Falls, Mass.

L. R. Garrity is in charge of the retail branch of the Overland-Harper Co., recently opened at the northeast corner of 52nd and Walnut streets, West Philadelphia.

J. E. Wright, veteran automobile and carriage manufacturer, died at his home in York, Pa., aged 60. He was one of the founders and for years vice president and sales manager of the Allen Motor Co., Columbus, O. He was also one of the organizers of the old Columbia Buggy Co., Hamilton, O. For nearly 30 years he was a leader in the carriage industry, and with the advent of the motor, recognizing its unlimited possibilities, in 1912 he joined forces with E. W. and W. O. Allen of Fostoria, O., in forming the Allen Motor Co. He retired from active business in 1917 on account of ill health.

Ben Lewis, formerly in the men's furnishing business in New York City in the automobile district, has become eastern representative of the Ford Mica Co. of Christopher street, maker of the F. M. C. spark plug. His extensive acquaintance and popularity along the Metropolitan automobile row will undoubtedly secure, through him, a profitable clientele for the F. M. C. plug.

Charles W. Mitchell and Harry Oliphant, proprietors of the Auto Sales & Service Co., Laurel, Del., have dissolved partnership, Mr. Mitchell selling out his interests to Mr. Oliphant. Mr. Mitchell will, however, continue in the automobile business, having taken over the Callaway garage on Market street.

J. H. Hadley is president and V. L. Brown vice president and general manager of a new concern to be known as the Hadley-Brown Motor Co., which will occupy the building formerly the headquarters of the Waterloo Overland Co. at Waterloo, Ia.

K. R. Roberts is president of the Emergency Service Co., which has taken over the emergency station and automobile accessories store at Leonard and Washington avenues, St. Louis, Mo., formerly conducted by the St. Louis Motor Service Co.

R. P. Rice, Ford dealer, is erecting a motor sales and service building at the west end of the Inter-City viaduct, Kansas City, Mo.

Ben Lewis, Eastern Representative Ford Mica Co.

Factory of Maryland Pressed Steel Co., Hagerstown, Md., Where Pasco and National Wire Wheels Are to Be Made.

Maryland Co. to Make Wire Wheels

The Maryland Pressed Steel Co., Baltimore and Hagerstown, Md., has taken over the manufacture and sale of National and Pasco wire wheels, the product of the National Wire Wheel Works, Inc., through an exclusive license agreement covering a long term of years. Heretofore National and Pasco wheels have been made by the Maryland Pressed Steel Co. and the National Co. has conducted the selling.

The Maryland Pressed Steel Co. is a subsidiary of the Poole Engineering & Machine Co., Baltimore, manufacturer of steel and semi-steel products for the last three generations. The Hagerstown plant affords 355,000 square feet of floor space with a minimum capacity of 1,000,000 wire wheels a year, making it one of the largest in the world. The general sales offices are to be removed from Detroit to Baltimore, and J. L. Justice will continue in charge of sales and advertising in the capacity of general sales manager.

With approximately 115 jobbers the selling organization of the Maryland Pressed Steel Co. ranks as among the strongest in the accessories industry. In Canada the wheels are distributed by the Northern Electric Co. with nine branches.

Among the exclusive features which it is claimed have contributed largely to the vogue of National and Pasco wire wheels are the device by which National wheels are locked to the hub by positive mechanical means, the standard tread of 56 inches, the same as wood wheels, and additional strength obtained through a distinctive method of spoke lacing, greater curb clearance than any other wire wheel eliminating danger of scraping or bending of spokes on the curb, equal tension of all spokes through a method of truing the rim by a special machine which practically prevents breaking or loosening spokes, a hub shell of pressed steel giving maximum strength with minimum weight, and a greater number of spokes.

There were fewer failures in the United States last year than in any year since 1881.

PRODUCTION OF PRINCIPAL CAR MANUFACTURERS.

Following is a compilation of the output of cars manufactured by 28 of the leading automobile makers of the United States for the month of January, together with the daily averages:

Car	January	Daily Average
Briscoe	1,000	34
Buick	15,000	500
Cadillac	400	14
Chalmers	1,200	40
Chevrolet	4,000	135
Columbia	600	20
Dodge	16,500	550
Dort	2,500	84
Essex	3,750	125
Ford	96,000	3,200
Hudson	3,000	100
Hupmobile	1,600	55
Jackson	100	4
King	200	7
Liberty	350	12
Lorraine	30	1
Nelson	120	4
Maxwell	6,700	225
Oakland	3,800	127
Oldsmobile	3,700	124
Overland	13,060	435
Packard	1,920	64
Paige	1,300	43
Paterson	220	7
Reo	1,200	40
Roamer	110	4
Scripps-Booth	750	25
*Studebaker	4,200	140
Total	185,310	6,119

*Report from Detroit plant. Production at South Bend plant just starting on new six.

Big Contract for Commerce Trucks

The big feature of the recent banquet at Hotel Congress, Chicago, of the midwest distributors of Commerce trucks, made by the Commerce Motor Car Co., Detroit, Mich., was the announcement by George D. Wilcox, director of sales and advertising, who presided, that contract has been made with H. J. Dougherty, former Republic truck dealer at Kansas City, Mo., which totaled more than $6,000,000.

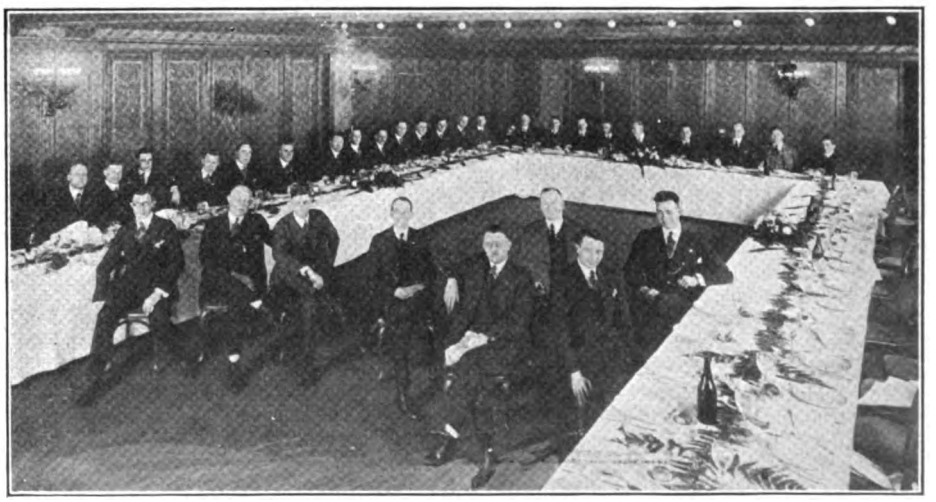
Mr. Dougherty, who is reputed to be one of the largest distributors of trucks in the country, has the Commerce sale right in Kansas and Oklahoma and contributory territory from Kansas City in Missouri and Arkansas, and he will absorb the Gateway Motor Truck Co., the present Kansas City Commerce distributor.

"A-B-C OF FORD MOTOR REPAIRNG."

Albertson & Co., Sioux City, Ia., recently issued a book entitled "The A-B-C of Ford Motor Repairing," which is somewhat unique in its idea of instructing Ford owners in the proper methods of grinding, refacing and reseating valves and valve seats. It contains a description of the "Little Sioux" Ford tool set, with complete illustrated directions for use. These tools are exact duplicates of the larger "Sioux" tools made by Albertson & Co. for all lines of cars, trucks and tractors, but is designed exclusively for use on the Ford car or truck. The retail selling price of the "Little Sioux" tool outfit is $7.75.

EXTENSIONS TO LIBERTY PLANT.

Since the completion of the new plant of the Liberty Motor Car Co., Detroit, the increased demand for Liberty cars has caused the making of plans for the extension of the service building an additional 300 feet, and Percy Owen, president of the company, announces that 12 acres adjoining the present site have been secured, doubling the ground available for the needs of the company.



Midwest Distributors of Commerce Trucks at Their Banquet at Hotel Congress, Chicago, Ill.

Recapitalization of Rainier Corp.

At a recent special meeting of the stockholders of the Rainier Motor Corporation, New York City, the proposed recapitalization plan was adopted by 100 per cent. of the capital outstanding. This provides for the issuance of 7500 shares of eight per cent. cumulative preferred stock, par value $100, of which 7000 shares are to be issued immediately, and 30,000 shares of common stock of no par value to be issued immediately.

The new preferred stock has been purchased by a syndicate headed by John Nickerson, Jr., investment banker of New York City, who at the meeting was elected a member of the board of directors, succeeding Godfrey Piel, resigned.

As a result of this recapitalization the Rainier company will erect extensive additions to its plant at Flushing, Long Island, N. Y., for the manufacture of worm-drive delivery trucks, the contemplated production for 1920 being three times that of 1919.

STONE TO JOIN HALLADAY MOTORS CORPORATION.

A. P. Stone, now district manager and director of the Great Western Oil Co., is, on April 1, to join the Halladay Motors Corporation, Attica, O., as general sales manager in charge of the distribution of the Halladay Six car. Mr. Stone is well known by a majority of successful garage men in several of the central states, particularly in Ohio.

The Halladay Motors Corporation states that its new plant No. 2 at Newark, O., 400 by 180 feet in size, will be completed on or before May 1, and an extensive increase in the production programme will be put into effect at that time.

HILL OPENS OFFICE AS AUTOMOTIVE CONSULTING ENGINEER.

L. Clayton Hill, well known in automotive circles through his eight-year connection with the Packard Motor Car Co., has opened offices in the Holden building, Detroit, Mich., as the head of an organization to engage in the general practise of consulting engineer, specializing in automotive activities.

During his association with the Packard company Mr. Hill was at first engaged in chassis design and later held the positions of body and aeroplane engineers. During the war he became associated with the French aviation mission under Capt. Lepere, designer of the Lepere aeroplane, being also associated with him in the Franco-American Engineering Co., and assisting him in the development of a highly efficient six-cylinder motor with four overhead valves. Mr. Hill designed a body and chassis around this type of motor, and the completed car is now undergoing tests.

One of Mr. Hill's clients in his new enterprise at Detroit is the Gartley-Weston company of that city, manufacturer of high-grade automotive accessories.

FAIRBANKS CO. ADDS TO SERVICE STATION EQUIPMENT.

Among the latest acquisitions to the line of automobile service station equipment handled by automotive supply department of the well known concern, the Fairbanks Co., New York City, are the products of the Duplex Rim Device Co., the T & T Dresser Co. and the F-B Electric & Manufacturing Co.

The Fairbanks company has taken over the entire output of these concerns.

INTERESTING BOOKLETS ISSUED BY ALUMINUM MANUFACTURERS, INC.

Aluminum Manufacturers, Inc., Cleveland, O., has recently issued a number of booklets which are of interest to the automotive trade. One, entitled "Lynite Pistons," gives a rather complete discussion of the advantages of aluminum pistons and also details in particular the construction of Lynite pistons. "What About Pistons," a smaller brochure, devoted to the same subject, is intended more especially for distribution among car owners and is written so as to present the subject from the motorist's point of view.

A booklet on wheels entitled "When Is a Pound Not a Pound," discusses in a general way the importance of reducing unsprung weight in passenger cars and trucks. A folder on "Lynite Forgings" points out the saving claimed to be made possible in such parts as connecting rods, etc., where strength and ductility are necessary, by the use of the Lynite products.

The Aluminum Manufacturers, Inc., will be glad to supply copies of any or all of these booklets to anyone interested.

PENCE CO. BUILDS OWN FREIGHT CARS.

The Pence Automobile Co., a motor car distributing concern at Minneapolis, Minn., has had built at Toledo, O., a special train of automobile freight cars to ply regularly between the GMC truck factory at Pontiac, Mich., the Buick factory at Flint, Mich., and the distributing point. The plans for this project were worked out by W. R. Stephens, sales manager of the Pence Co.

JONES CAR COMPANY TO REBUILD AT WICHITA.

Two buildings, 81 by 252 feet, and their contents, were recently destroyed by fire at the plant of the Jones Motor Car Co., Wichita, Kan. These housed the painting department, where over 100 bodies were being finished, and the wood working section, where another 200 bodies were under construction.

The direct loss is placed at $200,000, covered by insurance to the extent of about 70 per cent. The assembly, trim shop and metal working buildings were not injured. This part of the plant is being run by tractor power, some 12 tractors being in use, until a new power plant can be installed.

The fire curtailed the March production to 75 or 100 cars. In April the production is expected to be five cars a day. New buildings are being erected and new machinery is being installed.

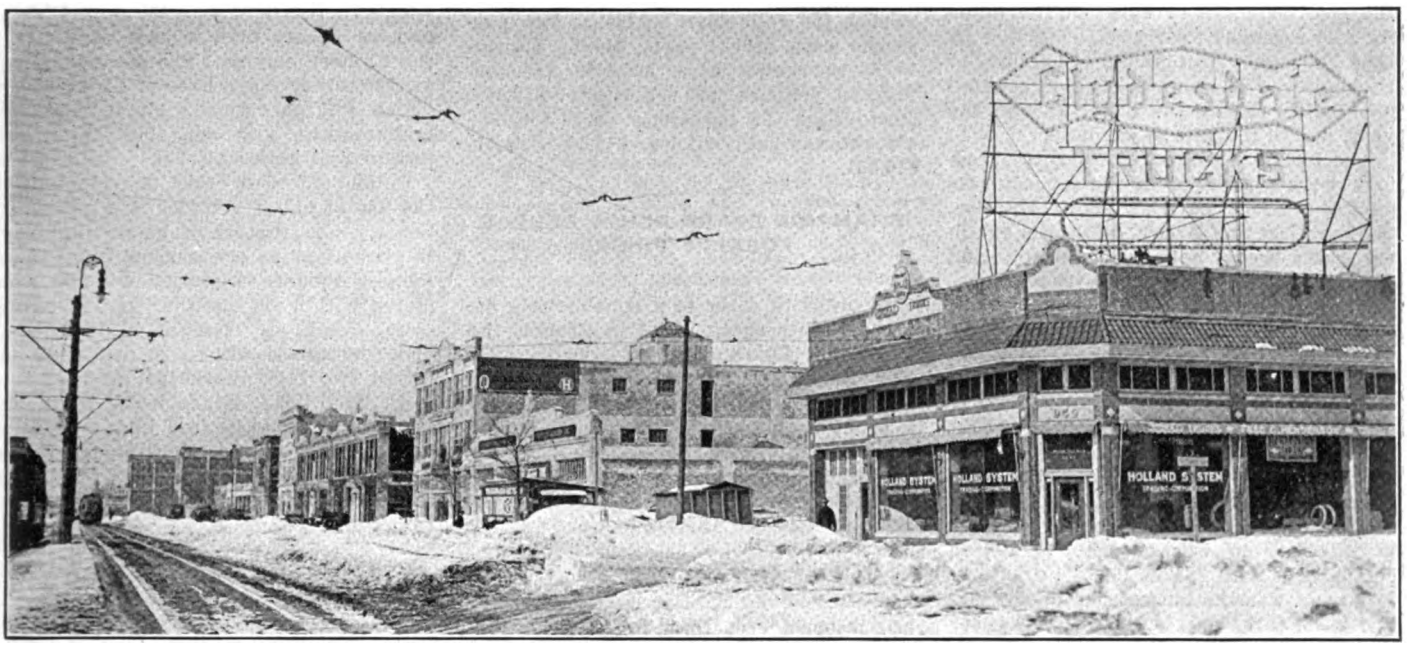
PRESENT STATUS OF SAXON MOTORS.

A conservative statement recently made by C. A. Pfeffer, president of Saxon Motors, the reorganized concern which succeeded the Saxon Motor Car Corporation last November, estimates the earnings for 1920 at $1,000,000, which is 10 times the amount of the dividend on preferred stock, with a balance of about $4.50 a share on the common stock.

The new company started business Nov. 1, 1919, with cash of $1,229,038, accounts receivable $265,937, and inventories of $735,948; against this was $92,405 for accounts payable, leaving a net working capital of $2,230,923. The present corporate structure of the company consists of $1,250,000 eight per cent. cumulative preferred stock and 180,000 shares of common of no par value, with 20,000 shares in the company's treasury. Dividends on common stock may be declared after the full preferred dividends are provided for if the net tangible assets, after deducting common payments, exceed and will be maintained at 2½ times the preferred stock then outstanding.

The board of directors of Saxon Motors consists of Barney F. Everitt, president of Everitt Brothers; George Edmunds, president of Edmunds & Jones Manufacturing Co.; B. S. Armstrong, president of Mabley & Carew Co., and Walter G. Souders, president of the W. G. Souders Co.

BOSTON'S WELL-KNOWN AUTOMOBILE DISTRICT.



The North Side of Commonwealth Avenue, the Most Beautiful "Automobile Row" of America, Looking from Braves' Field to Fuller Square, Piled High with Snow That Practically Blocked All Power Vehicle Traffic.

MUTUAL MOTORS MOVES TO NORTH TONAWANDA.

The Mutual Motors Co. announces its removal from Jackson, Mich., to North Tonowanda, N. Y., where it is able to supply repair parts for the following models of Marion-Handley automobiles made by it: Marion-Handley A and B; Marion H and K; Imperial 64 and 66.

GRAY-DORT CO. EXPANDS.

The Gray-Dort Co., Chatham, Ont., has taken over the entire plant of William Gray's Sons-Campbell, Ltd., one of the oldest carriage manufacturing concerns in Canada. Several buildings have been added to the Chatham plant and the Gray-Dort Co. has also erected large warehouses at Montreal and Ottawa.

The Hemloch 6400 Tire Co. is to commence business at 990-918 Union avenue, Memphis, Tenn., with the following officers: President, F. M. Gemmill; vice president, Ralph Moncrief; secretary, R. W. McCaughan.

Cameron Licenses Liberty Co.

The Cameron Motors Corporation, 2 Columbus Circle, New York City, has established a plant at Bridgeport, Conn., where it has licensed the Liberty Manufacturing Co. for the quantity production of Cameron four-cylinder air cooled motors.

Owing to the tremendous demand for small four-cylinder motors, both in this country and abroad, due primarily to the rising cost of fuel, the first size of motor put into production in this new plant is 2⅝ by four inches, four-cylinder, suitable for light passenger cars, delivery wagons and cultivators. The motor is being produced complete with three-speed sliding gear transmission and plate clutch.

The production of the Cameron three by 4½-inch, six-cylinder motor, is already well under way at the Shelton plant, this motor appearing first on the market in the new Paranti light car, now being built in Buffalo.

EASTERN STATES EXPOSITION.

The Eastern States Exposition will be held at Springfield, Mass., Sept. 19-25, and among the features planned are automobile, horse and live stock shows, exhibitions and demonstrations of tractors and farm machinery, exhibits of varied industries, boys' and girls' industrial and agricultural exhibits, state exhibits, horticultural, floricultural and dairy displays, live stock sales, horse and auto racing, college judging contests and auto polo.

J. L. Brooks is president of the association, H. G. Fisk treasurer and H. A. Moses chairman of the executive committee, and John C. Simpson, 292 Worthington street, Springfield, is general manager.

Digitized by Google

Car Exports for 1919 Jump 88½ Per Cent.

Net gain of 88½% in passenger car exports and 50% in truck shipments over the year 1918 are revealed in the totals for the calendar year 1919, compiled by the National Automobile Chamber of Commerce. The curve of increase fell off slightly during the latter part of the year, due to the rate of exchange.

The heaviest gains for American products were registered in the non-car producing sections, such as South America, the Far East and Africa, while the smallest gains were noted in Europe and Great Britain, where there is competition with home products.

The grand totals for the two years are as follows: 1918—Passenger cars, 39,936, valued at $36,278,292; trucks, 10,308, valued at $26,814,952. 1919—Passenger cars, 67,106, valued at $73,642,035; trucks, 15,467, valued at $35,099,079.

The gain in passenger cars in South America totaled 9016 in comparison with 6782 the previous year; the gain trucks in this section was over 100%, 796 in comparison with 384 in 1918.

Canada was the largest purchaser, taking 8822 cars, only a slight gain over the 1918 figure of 8543. The truck imports from the United States jumped to 2164 as against 1596.

England leads the field in passenger car gains, buying 5150 automobiles from the United States, compared with 398 of the year before. England's truck purchases, however, decreased from 2080 in 1918 to 890 in 1919. The sale of army equipment accounts for the slump.

France and Italy are both restricting the American product, so that exports to those countries are falling off; but Belgium, Norway, Sweden and Denmark, whose total purchases from the United States in 1918 were 108 trucks and 296 automobiles, increased to 1807 trucks and 7528 passenger cars during the past year.

Exports to Mexico went up over 100 per cent. The Philippines more than tripled their demand for trucks, and the shipments to the non-contiguous territories of the United States were six times as great as the preceding year in the truck field and 7½ times in the passenger car line.

During the month of September, 1919, the number of passenger cars shipped from the United States to foreign countries totaled 6383, valued at $6,838,439; commercial cars numbered 1359, valued at $3,369,581; total value of automotive parts exported, $4,560,273.

Shipments to non-contiguous territory of the United States during September included the following: Alaska, two passenger cars, $1653; parts, $4462. Hawaii —108 passenger cars, $92,975; 11 commercial vehicles, $23,653; parts, $12,964. Porto Rico—26 passenger cars, $36,093; six commercial vehicles, $18,545: parts, $16,531.

CHAMPION SPARK PLUGS REDUCE FOREIGN PRICE.

In order to cater to a considerable demand for its spark plugs in France, the Champion Spark Plug Co., Toledo, O., has devised a plan that will enable French dealers to handle this product at a profit despite the 70 per cent. import duty on automobile accessories, by reducing the price to French consumers sufficiently to take off 35 per cent. of the tax. Before this reduction was allowed the cost of a spark plug listed at $1 in France was approximately $3 in French money.

It is considered that the need for this price reduction will be removed when the French government puts into effect the reported decrease in tariff on this class of goods. Since the British embargo was lifted it is reported that the Champion Spark Plug Co. has shipped its products in large quantities to the United Kingdom, South Africa, Australia, New Zealand, India, Japan, Chile and other countries.

INDUSTRIAL PLANT FOR BRANTFORD, ONT.

A plant is to be established in Brantford, Ontario, Canada, for the manufacture of Bluebird electrical appliances, which will eventually employ 1500 persons. The directorate of Brantford Motor Trucks took the initiative in establishing this industry, and the plant built by the United States government for the manufacture of munitions during the war will be utilized. J. B. Detweiler, general manager of the Brantford branch of the Steel Co. of Canada, will resign his connection with that concern to become president of the new company.

Motoring Increasing in China

It is reported that motoring is rapidly increasing in popularity in Pekin, China, where there are said to be more Chinese owners of cars than in any other city in the Chinese empire. The number of passenger automobiles here is about 650, of which a large majority are of American manufacture, and over 500 have been bought by Chinese.

Coincident with this development in the use of motor vehicles is a movement for the construction of better highways. If present plans are carried out China's longest modern highway will be completed within six months. It will extend from Pekin to Tienstin, a distance of about 80 miles; will be 20 feet wide and raised two feet above the existing road bed. Four bridges are to be built, and stations will be located about 10 miles apart, with repair facilities and supplies of accessories and fuel. The cost of maintaining this road will be raised from toll fees.

INTEREST IN LINCOLN HIGHWAY.

During the past six months, A. F. Bement, vice president and secretary of the Lincoln Highway Association, has received inquiries for details concerning the inception of the movement and the methods of construction and maintenance followed by the association, from Australia, Canada, Cuba, Brazil and Poland, and Spain is the latest country to apply for information. The editor of Espana Automovil y Aeronautica, the official organ of the Royal Automobile club of Spain, with headquarters in Madrid, wishes to secure data for an illustrated article so that Spanish automobilists may know something about this longest and best known road in the world.

CARS FOR ENGLISH DOCTORS.

The British Medical association has taken up the matter of preferential treatment in that country in regard to the early delivery of motor cars with the result that a large majority of manufacturers have intimated their desire to arrange, so far as possible, that cars ordered by doctors for professional use shall have priority in delivery.

Linscott Well Known in Supply Trade

One of the best known automotive supply houses in the New England field is the Linscott Supply Co., of which F. C. Linscott is president and manager. This concern is located at 568 Commonwealth avenue, Boston, and has, during the past year, installed a separate department for the better accommodation of its rapidly increasing business.

F. C. Linscott, President and Manager, Linscott Supply Co., Boston, Mass.

Mr. Linscott has been associated with the automotive industry at the Hub for many years, and under his efficient management the Linscott Supply Co. has greatly augmented a merited patronage founded on integrity, fair dealing and good will.

Among the well known equipment recently taken on by this concern, and with the distributors of which it is meeting with unqualified success, is the Universal cylinder reboring tool for any motor, as well as special equipment for babbitting and boring the cylinders of the Ford model T car and Fordson tractor, manufactured by the Universal Tool Co., Inc., 435 Woodward avenue, Detroit, Mich., maker of other well known Utco products.

The display of automotive equipment made by the Linscott Supply Co. at the Boston show, booth 521, attracted unusual interest.

SUPERIOR AUTO SALES CO.

The Superior Auto Sales Co., Inc., is now doing business at 710 West Third street, Dayton, O., as distributor of King motor cars for southern Ohio, Kentucky, Tennessee and the southeast portion of Indiana. It operates branches at Lexington, Ky.; Columbus and Cincinnati, O. It also has the sales agency for Diamond T motor trucks. The officers are as follows:

President, W. I. Lynam; vice president, L. L. Allan; secretary-treasurer, A. H. Walker; sales manager, H. F. Greene.

HOW AUTOMOBILE TYPES WERE NAMED.

According to the Locomobile Co. of America, Bridgeport, Conn., the word "coupe" comes from the French word "couper," to cut, and the style was developed from the cutting down of the coach.

The limousine, one of the oldest and most generally liked of all the bodies adapted for the motor car, is named after the old province of Limousin, in central France, where the weather was proverbially bad.

The word sedan is, of course, derived directly from the sedan chair, which was used everywhere in the 17th and 18th centuries.

A limousine becomes berline when the driver's compartment is fully built in. The berline coach originated in 1660 in the town from which the name was taken.

The victoria is the open type fitted with a folding top covering the rear seat only, and originated in 1851 in the form of an elegant little pony phaeton built for Queen Victoria.

SLOCUM, AVRAM & SLOCUM LABORATORIES REORGANIZED.

The Slocum, Avram & Slocum Laboratories, Inc., Newark, N. J., has been reorganized and a complete change in management has been effected. It will be remembered that, during the war, this company gained a high reputation as a successful manufacturer of the Schneider eight and 4.7-inch quadrant for the United States government. This company has recently secured a large amount of additional capital and will conduct an extensive commercial business. The manufacture and sale of all Flexite products, heretofore produced by F. R. Blair & Co., Inc., has been taken over by the Slocum Laboratories, including universal joints, propellor shafts and flexible magneto couplings.

The manufacturing plant of Slocum, Avram & Slocum Laboratories, Inc., is located at Newark, N. J., and the executive offices are in the Woolworth building, New York City.

LINSCOTT MOTOR CO. DISTRIBUTES REO CARS AND TRUCKS.

The Linscott Motor Co., 566 Commonwealth avenue, is the Boston distributor of Reo cars and trucks, made by the Reo Motor Car Co., Lansing, Mich. The manager of the Linscott Motor Co. is Charles G. Andrews, who is in charge of the sales of both passenger cars and the "Speedwagon," the well known commercial motor wagon produced by the Reo Co. The Linscott Motor Co. has been in the automobile business in the Boston and New England field ever since the motor car was first put on a trade basis, and is consequently one of the best known dealers in the eastern section of the country.

DORT DISTRIBUTORS IN CHICAGO SECTION.

Louis Geyler, distributor in the Chicago section of Dort cars, made by the Dort Motor Car Co., Flint, Mich., announces the appointment of the following new dealers in his territory:

Central Auto Co., DeKalb; T. S. Bunn, Inc., Bloomington; C. P. Wing, Elgin; Coats' Garage, Aurora; W. R. Beck, Frivoli; Bettendorf Garage, Bettendorf, Ia.; Pet-Gun Motor Car Exchange, Brennen & Doty and Stewart Auto Sales Co., Chicago.

DISTRIBUTION OF ARTCRAFT AUTO TOPS.

H. S. Norton, sales manager of the General Top Co., Cleveland, O., announces that the Starkweather Co., Detroit, Mich., of which C. C. Starkweather is president, has been appointed distributor of Artcraft tops in the lower peninsular of Michigan, northwestern Ohio and northeastern Indiana. The first shipment of Artcraft tops was a special express train load of 104 tops from the factory in Cleveland.

Beacon Street Front of Headquarters of Linscott Supply Co. and Linscott Motor Co. in Boston. The Sales Rooms and Offices Face on Commonwealth Avenue.

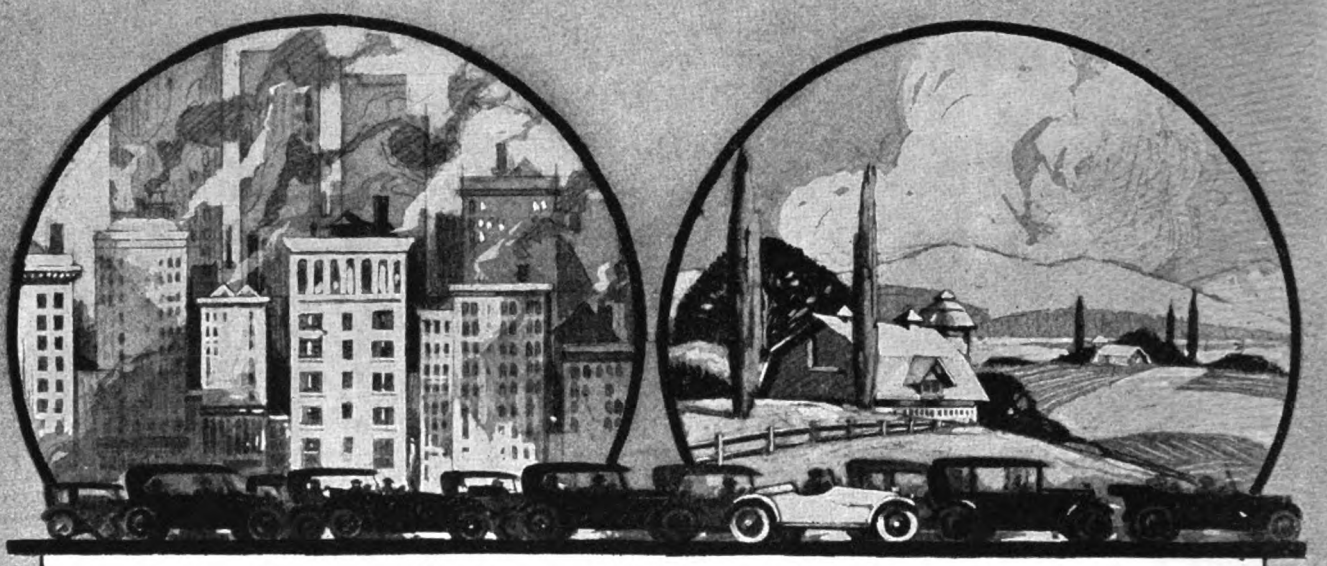
Profitable Battery BUSINESS



—As Broad As Your Selling Territory

Universal Batteries are perfectly suited to every starting, lighting and ignition need—on any make machine. Years and years of service have established Universal supremacy of longest life—greatest strength and soundest economy.

Every motorist who *owns a Battery*—no matter what make it is—who needs new parts, repairs or service, is a Universal "prospect."

Universal parts are most successfully employed on all standard makes of batteries.

Universal Batteries plus Universal Service enable any dealer, anywhere to secure a lion's share of Battery Business. It is like a "loaf" of trade as compared with a scant few crumbs of business. The broadest business a dealer can conduct or create because it embraces the outer-most limitations.

We are pioneers in the manufacture of Batteries. Years of experience stand back of every Universal Battery—every Universal part. Years of profitable trade stretch before dealers who stock the Universal line.

We also manufacture Universal Sealed Glass Cell Batteries for house lighting systems and parts for any make of sealed glass cell Batteries.

Write *now* for our agency proposition. Do more business. *Make* more money. *Give* your trade Battery value and service value that keep customers contended.

Universal Battery Co.
3420 So. LaSalle St., Chicago, Ill.

This Broad Guarantee Protects Users of the Over-land Guide

Send us retail price, $8.50, and we will send you parcel post, one Over-land Guide. Use it 20 days, properly installed, and if at the end of that time you are willing to part with it full purchase price will be refunded upon its return.

The Over-Land Guide is proving to be the big selling Ford car and truck equipment of the year.

Every owner wants and needs one. It sells at sight and creates a demand wherever Ford cars or trucks are used. Sales are limited only by the number of these cars and trucks in service.

The Over-Land Guide is a highly developed and wonderfully efficient device that absolutely controls the steering of the Ford car or truck. It is sold with an iron-clad guarantee of service, economy and satisfaction.

The kind of equipment that every jobber and dealer can place and which adds greatly to his prestige and profits.

A Wonder Worker

The driver can steer the machine with the tips of his fingers.

The wheels will always keep in alignment over rocky, rutty or hilly roads, through sand, gravel, mud holes or washouts.

Even though the steering gear be broken or fails to work, the Over-Land Guide will continue to keep the Ford car or truck on a straight course.

It protects the entire front system and steering mechanism from undue wear and breakage. The Over-Land Guide absorbs all shocks and stresses.

It Stops All Wabbling, Scooting and Creeping

It eliminates all danger from a blow out of a front tire at any speed, as the Over-Land Guide will hold the Ford car or truck to its course.

It eliminates all strain in driving. It will save in time, repair bills and car service.

It is car insurance of the highest order. It insures against ditching of the car, which oftentimes proves fatal to the occupants.

The Over-Land Guide cannot fail to work or get out of order. It is finely made, sightly and will last for years. Estimate the worth of an Over-Land Guide from any viewpoint—safety, service and dependability

The OVER-LAND GUIDE bolts to the center of the front axle and the center of the spindle connecting rod (or tie rod), securely relieving the vibration and strain in the spindle connecting rod (or tie rod) and the entire front system, and the steering mechanism up to the steering wheel. Can be attached in a few minutes by anyone.

It will add generally to car efficiency, convenience, pleasure and comfort, and assures the longest possible service life to a Ford car or truck.

The Over-land Guide Protects These Parts

Spindle connecting rod (or tie rod). Spindle body arms and bushings. Spindle body and bushings. Ball and roller bearings and hub. Steering connecting rod and ball joints. Steering gear ball arms. Steering post bracket, bushing and bolts. Steering post. Steering gear pinion. Steering gear drive pinions. Steering gear internal gear case and bushings.

Also helps to keep axle from breaking or bending—and may save the entire car from destruction.

Jobbers and Dealers—We offer a 100% utility attachment. All Ford car and truck owners will buy at sight. Sales are limited only to the number of Fords in use. The market is everywhere. Our proposition is liberal and the discounts will satisfy you.

BLUE RIBBON PRODUCTS

Are a Standard Line

Jobbers and Dealers stock the full Blue Ribbon line as they do all other tried, proven and constantly selling goods.

Blue Ribbon products are made by specialists who depend wholly on the quality and service giving satisfaction afforded by lines bearing their trade mark.

There can be no experimentation at the expense of the consumer, dealer or jobber. All Blue Ribbon Specialties must be as good as they are practical in every day use as it is possible to make them.

A nation wide trade, enormous expenditures devoted to development and promotion work as well as the maintenance and operation of the largest plant of the kind in America is too great a stake to gamble against quality.

Blue Ribbon Products today stand supreme. They are passed over the counters backed by an unqualified guarantee on the part of the trade that can leave no doubt as to their merits.

That is why Blue Ribbon Products are a standard line and will always continue to be so.

That is why all jobbers and dealers sell and list them in their catalogues.

Above all else that is why the consumer buys Blue Ribbon trade marked products. Blue Ribbon Products cost no more than others, yet represent the most profitable line that can be placed by the jobber or dealer.

If the **BLUE RIBBON** trade mark is to be seen on your shelves or counter you have a silent salesman in your store that is always working, always earning.

All Blue Ribbon Specialties are sold in quantities to meet any requirement.

The full line affords a complete line and it pays to specialize in known quality goods.

Blue Ribbon Specialties Include:

Blue Ribbon Cold Cream Hand Soap
Contains no pumice or sand.

Blue Ribbon Leak Proof Cement
A permanent radiator cement.

Blue Ribbon Nickel Polish
For nickel parts and trimmings.

Blue Ribbon Auto Body Gloss
For automobile or furniture.

Blue Ribbon Lightning Carbon Remover
Quick and positive in action.

Blue Ribbon Black Enamel
For lamps, hoods, radiators and metal parts

Blue Ribbon Auto Top and Seat Dressing
A waterproof dressing that restores tops and seats.

Blue Ribbon Hand-On Patch
A self-vulcanizing patch for shoes and tubes that never fails.

Blue Ribbon Cream Metal Polish
For any metal. An easy, quick working, satisfactory polish.

Blue Ribbon Oil Soap
A pure vegetable oil soap for any purpose. All quality and efficient.

This is the time to consider your winter and spring requirements

Jobbers and Dealers: Prices and discounts at request.

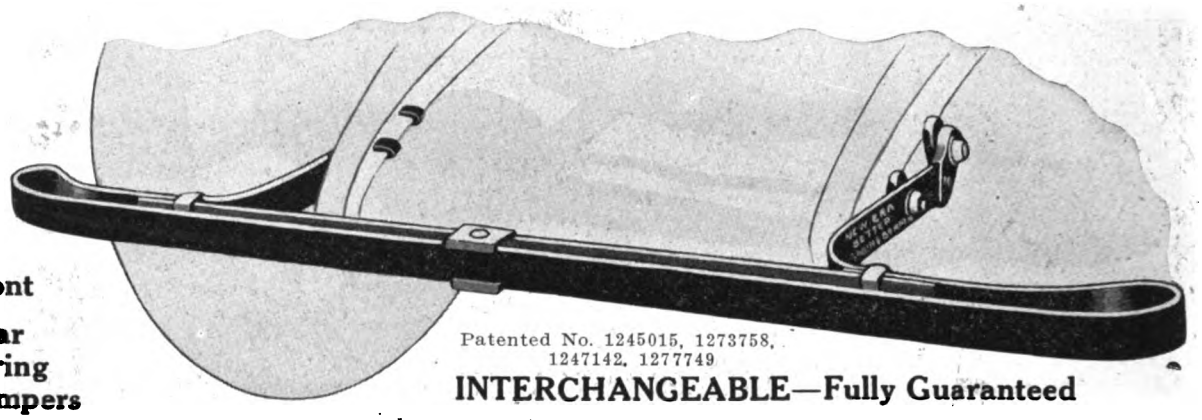
NEW ERA
"Better" Spring Bumpers
FOR ALL MAKES OF CARS



Front and Rear Spring Bumpers

Patented No. 1245015, 1273758, 1247142, 1277749

INTERCHANGEABLE—Fully Guaranteed

STRONGER — LIGHTER — NEATER

Unusual Resiliency

The New Era "Better" Spring Bumper is constructed of tempered spring steel bars, one inch apart, which are tied in center with three-inch plate, assuring an unusual strength and resiliency. A bumper is as strong as its weakest point, and there are no weak points in the New Era Bumper.

Absorbs Shocks

No matter from which angle the New Era "Better" Spring Bumper strikes, it absorbs and distributes the shock throughout its entire length and arms. It fully protects both occupants and car, and is the best automobile insurance obtainable.

No Dealers' Dead Stock

One big important feature is the free exchange of attaching arms for any more salable cars; so not a dollar's worth of dead bumper stock need be carried. A positive evolution and solution.

1920 Prices—Tax Absorbed

Standard Black	$11.55
Special Black	13.65
Ford—Front and Rear in Black	10.50
Rustproof Zinc Nickel, extra	2.10

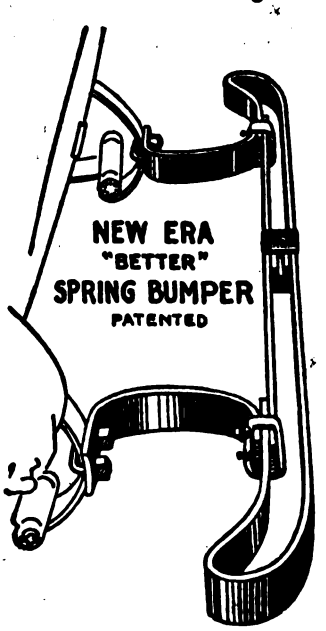
Ready and Profitable Dealer Sales

The public are sold on their knowledge of a spring bumper, it being the only practical and real shock absorber. There is an unusual opportunity for dealers to make liberal discount and quick stock turnover. No dead stock. Excellent factory co-operation. Get full details at once.

No Cutting or Drilling of Frames

Our Patented Universal Adjustable Hook on attachments are quickly attached to 95% of all makes of cars; on the fronts as well as on some rears. Hooks are attached to either top or bottom edge of frame, without interfering with splash pan.

Remarkable Resiliency



New Era Spring & Specialty Co.

1177 Hamilton Ave. **Grand Rapids, Mich.**

At 100 Miles an Hour

A Motor Would Operate Efficiently Without Piston Rings

Gas leakage past the pistons at this high speed of piston travel would be negligible. The fraction of a second required for the power stroke would not give the gas time to flow past the lubricated bearing face (5" long or more) of the pistons. **But the valves could leak**—at best they have not more than 3/16 inch bearing surface and are neither lubricated nor kept free from the carbon deposit.

The same principle applies to a motor at normal speeds equipped with closely fitting pistons and rings. Seldom is compression lost around the piston as compared to leaking valves—the length of the self cleansing and lubricated bearing surface prevents leakage. But valves and valve faces—subjected to a flow of free carbon—are nearly always carbonized and leaky except when freshly ground. Until the advent of Flexedge Valves—which continually remove carbon—there was no method of maintaining clean valve faces.

Flexedge Valves Are Self Seating and Self Grinding They Prevent the Accumulation of Carbon

Flexedge Valves keep this narrow valve bearing surface clean, bright and tight. Built up of paper-thin steel laminae, they flex slightly along their elastic edges like the leaves of a spring, removing carbon as fast as it is deposited. Once installed they never need re-grinding—compression is always held and motor performance is greatly improved.

TESTED AND PROVED BY OVER 5,000 DEALERS

Make an accurate compression test with a gauge on your own car—then install a set of Flexedge Valves. Run the car three months or more, then test again, and note how compression is held by Flexedge. Dealers who have made this test turn Flexedge Valves into quick profits because they know the results they give. If you haven't tried Flexedge Valves, send for a test set today. Free particulars on request.

Regular and oversize stem sizes of Flexedge Valves for all of the popular makes of cars. Stock from your jobber.

DUFF

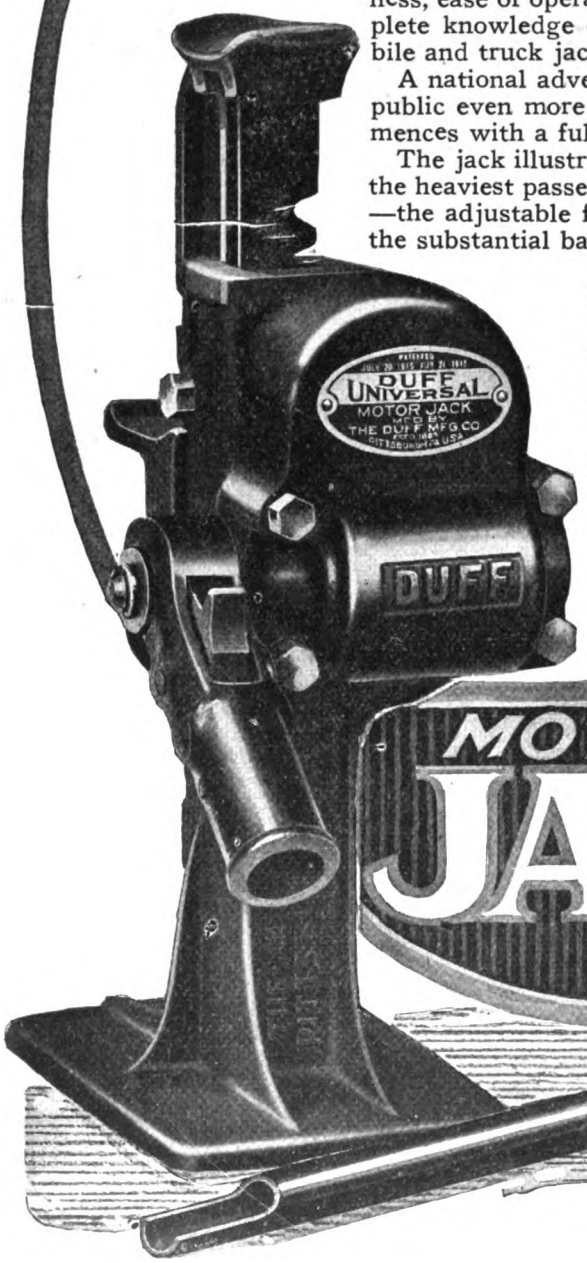
DUFF JACKS Are Profitable to Sell

Duff Jacks for automobiles and trucks are members of a nationally-known family, which embraces high-quality jacks for every form of lifting service. The Duff makers are jack specialists; have been for many years. Wherever there is a lift, there is a Duff that is best for it.

The special standards of quality—of strength, simplicity, sureness, ease of operation and long life—made possible by this complete knowledge of jack manufacture distinguish Duff automobile and truck jacks from all others.

A national advertising campaign, which will make the general public even more familiar with the merits of Duff Jacks, commences with a full page in the Literary Digest for March 27.

The jack illustrated is the Duff Universal No. 411. Easily lifts the heaviest passenger cars. Note its many quick-selling features —the adjustable footlift to fit any car, the long coupled handle, the substantial base.



The high grade materials and workmanship in this jack are duplicated in the various models for truck service. Duff Jacks have been adopted as standard equipment by many of the leading truck makers because of their strength and durability.

The discounts to dealers selling Duft Jacks are unusually liberal. Ask your Jobber, or write us for detailed information.

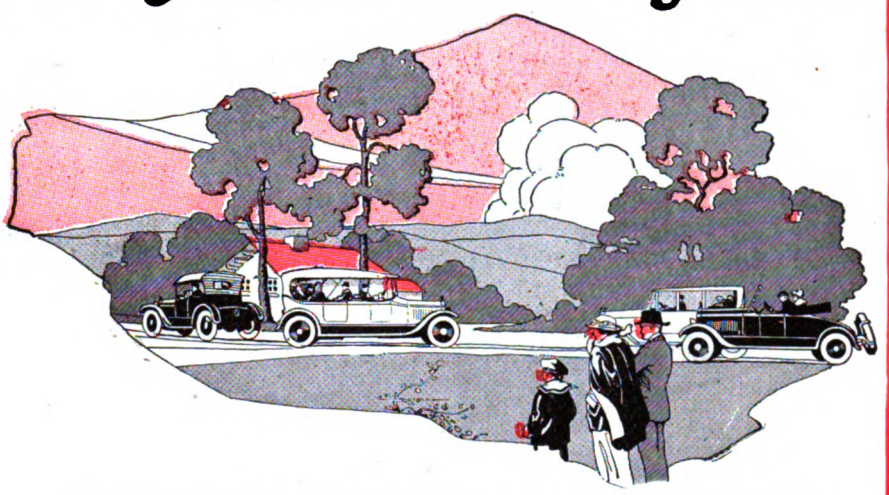
Distributors and Dealers!

This is the day of the Sterling Tire!



WE want wholesale distributors and retail dealers to write at once for special information. We still have some unoccupied territory.

The endurance that all tire makers have been striving to build into their tires for many years, we now give you — in STERLING TIRES!

Our earnest desire to make a thoroughly reliable tire, coupled with the fact that we have every manufacturing resource, has produced an endurance in STERLING Tires that has seldom been equalled—and never excelled by any other tire.

Double Profit for Dealers!

The dealer makes two profits on every STERLING Tire: First, he makes his customary cash profit—and second, he makes the additional profit which always comes from a satisfied user.

Better write us today!

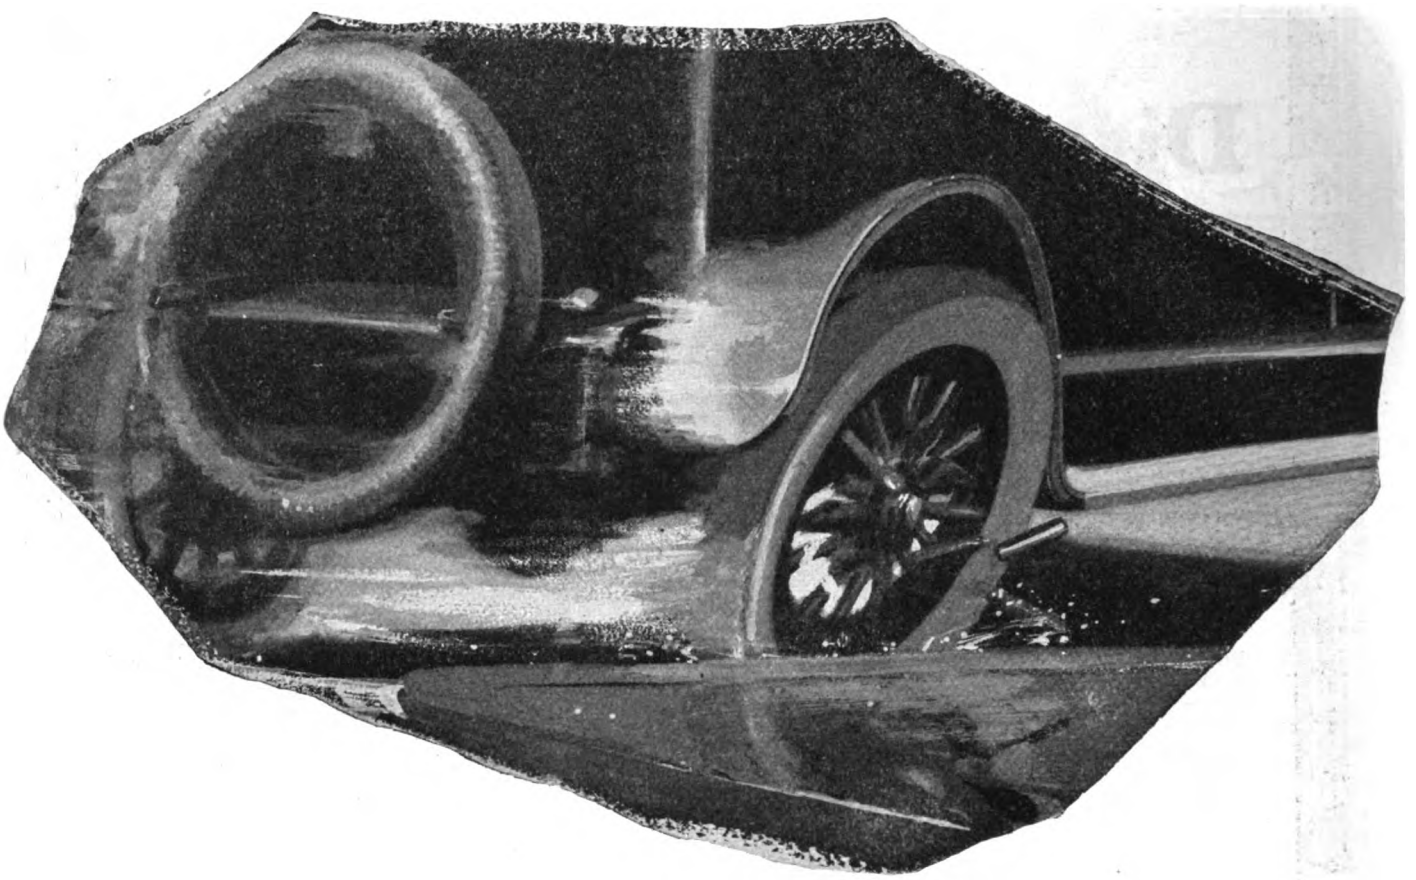
Powrlok in the Rear Axle



Prevents Skidding

Powrlok at one stroke minimizes skidding—the greatest danger—and stops stalling—the greatest inconvenience in automotive travel.

This is accomplished by a simple, time-tried and proven mechanical principle, which automatically distributes the power to the rear wheels as it should be—in direct proportion to the traction or hold which they have on the ground—instead of in indirect proportion as the ordinary differential does.

Powrlok has been in actual use for over five years in upwards of 40,000 cars, trucks and tractors—invariably making good.

Upon examination, you will find it as simple and durable, as accessible and fool-proof as the finest differential ever built.

We believe no other device has ever met with such a unanimous approval by manufacturers. Over Sixty manufacturers of cars, trucks, tractors and industrial trucks now use it as standard equipment.

Complete information is given in our new booklet—"More Than A Differential." Ask for it.

Specify Powrlok in the rear axle when you buy any car, truck or tractor.

THE POWRLOK COMPANY, 1107 EAST 152nd Street, CLEVELAND, OHIO.

SUPERB ENDURANCE

Tires

Behind the Hand-built Madison

THERE is, first of all, our experience of forty years in this business, and our unshaken conviction that only the most careful hand-workmanship can build genuine tire endurance.

There is the pride of our craftsmen in the work of their hands—the essential human element.

There is our great modern plant at Buffalo, N. Y. where we have installed every mechanical aid.

Finally, there is the compelling enthusiasm of those who are selling and using the hand-built Madison, who have tried and proven the superb endurance of the tire. Will you join them?

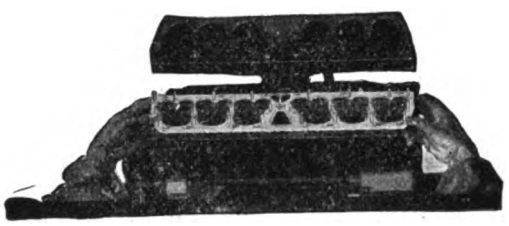
Victor Copper-Asbestos Gaskets Are For All Types of Motors



Showing perfect alignment of Victor Gaskets with studs, combustion chambers and waterways

Victor copper-asbestos cylinder head gaskets are stamped from dies cut according to the manufacturer's original specifications.

Each gasket is made for a particular motor and fits that motor perfectly.

With dies for more than 300 cylinder head gaskets and for more than 4,000 types of gaskets of all kinds, jobbers have a complete line to draw upon. They can furnish every motor from this line alone.

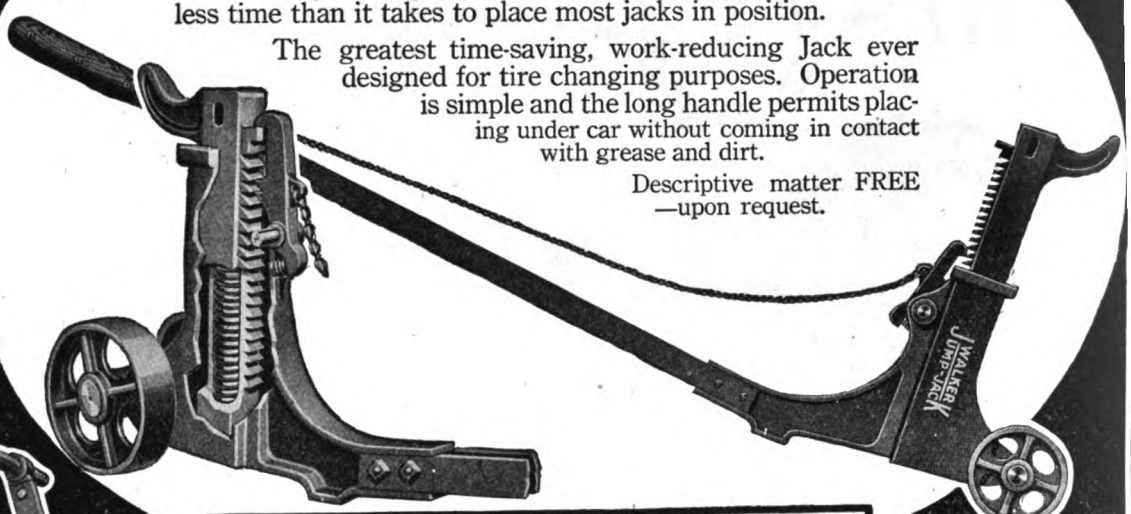
TWO MASTER JACKS

Walker Jump-Jack

The new Walker Jump-Jack is designed especially for tire removal and replacement. It meets a specific need in a most efficient way. Jump-Jack is built for speed—it raises a car in less time than it takes to place most jacks in position.

The greatest time-saving, work-reducing Jack ever designed for tire changing purposes. Operation is simple and the long handle permits placing under car without coming in contact with grease and dirt.

Descriptive matter FREE —upon request.



Walker Manufacturing Co.
Racine, Wisconsin

Roll-a-Car

The new and perfect Garage Jack—designed and built on correct mechanical principles of the finest obtainable materials.

ROLL-A-CAR meets the most exacting requirements wherever a Garage Jack is needed or used. Operated with great ease and simplicity. Each stroke of the handle raises car one inch. Six strokes raises to desired height.

ROLL-A-CAR is indispensable where the crowded condition of the modern garage makes it imperative to move cars in small space. The most desirable, efficient and serviceable Garage Jack ever offered to the automobile world.

The Wizard wrench represents more than 30 years' specialization. No other tool equals its utility or time economy.

It is as serviceable as the average wrench set, for its 10 settings will fit practically all the bolts, nuts and cap screws of a car, truck, motorcycle or bicycle.

These range from 1-4 to 7-8 inch, can be made instantly, and there is no need of changing tools or finding or fitting parts.

Wizard wrenches are made of the finest grade of heat treated steel and bear the Wakefield trademark that is known the world over as a guarantee of quality.

In the hands of the mechanic, the driver or the owner it means a saving of time. Compared with the cost of tools of equal utility it is remarkably cheap.

The List price is $1.50

Jobbers and Dealers

Wizard wrenches sell at sight. We offer a sales proposition that means big profits. The discounts are generous. Write today for details.

Quality Tires

THE AMAZON is a *Quality Tire* through and through.

Quality means unusual wearing qualities—less trouble—greater resilience than you could hope to receive from ordinary tires. It means true tire economy.

The satisfaction AMAZON TIRES give users make it a particularly desirable and profitable tire to handle.

The Amazon Rubber Company is protected against the scarcity of cotton fabric and in addition to supplying its own organization will be able to take care of a limited number of new accounts.

Dealers: Applications for territory should be made immediately

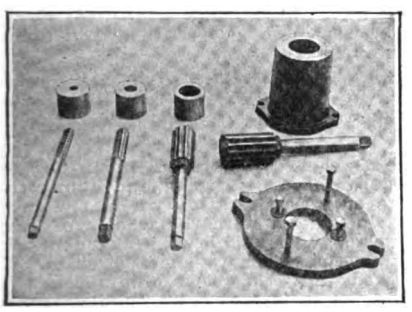
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

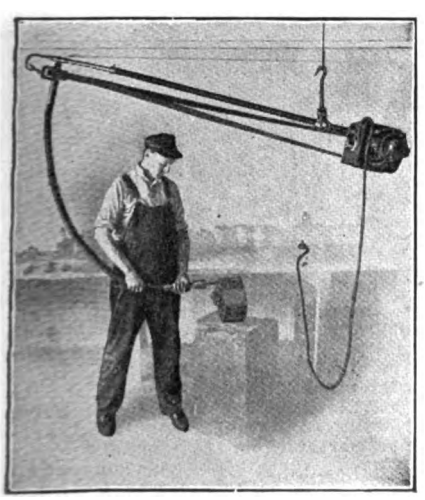
"Tribune" Transmission Rebuilding Tool for Ford Cars is designed to accurately ream the bushings in the gears of the Ford transmission. The reamers are made from hardened tool steel, especially adapted for this class of work and are provided with the proper guides for the different size gears. It is stated that work that originally took many hours to do with a lathe may now be done in 30 minutes by the use of the Tribune transmission re-



building tool. Each gear is locked in the large casting provided with the outfit and each reamer is piloted through a hardened steel bushing. The large drum has various diameters turned on the inside to accurately take each gear. All that is necessary to be done, it is stated, is to fit the gear having the new bushing, inside the large casting, bolting the large casting to the face plate when the bushing is ready to be reamed.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, complete, $75.

Stow Suspended Gee Whiz and General Utility Tool was designed to obtain extreme flexibility for grinding and to re-

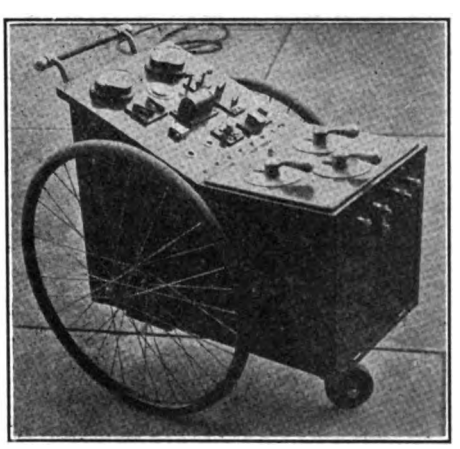


lieve the operator of all unnecessary weight as shown by the illustration. Besides the advantages stated, it is claimed that the tool provides the ideal method of suspending and driving a flexible shaft, insuring long life and low upkeep. Where the lack of floor space is an object or the operator wishes to work over a bench, such an arrangement gives greater flexibility and allows more freedom of movement. These tools can be supplied for light drilling and grinding and with the long arms it is possible to do work over a large area. The Utility tool is easily moved and can be adjusted for length of arm and height of standard.

The Utility tool will operate from any lamp socket and can be supplied for 110 to 220 volts direct current, or 60 cycles single-phase, alternating or universal current. These outfits are made in four sizes, Nos. 1, 2, 3, 4, supplied with a ¼ horsepower motor for the first three sizes and one horsepower motor for the fourth size.

Manufactured by the Stow Manufactur- Co., Inc., Binghamton, N. Y. Prices on request.

The Niehoff Test-Kart is the latest achievement in the way of a complete testing outfit for locating all electrical trouble in the ignition, starter, generator,



battery, wiring, relays, meters; in fact, anything in connection with the electrical mechanism of an automobile. It is not only a time and money saver to garages and electrical service stations, but also a convenience to the public, as it will enable the repair man to determine the trouble on the car while the motorist waits, consequently he can be intelligently informed as to what has to be done, and an estimate given on the approximate cost. The wagon is equipped with leads, ready for attaching to any part of the electrical system for locating shorts and grounds. Storage battery fits right in the wagon. All meters are special and of Weston make. It is the ideal rig for general automotive garage service stations.

Manufactured by Paul G. Niehoff & Co., 232-242 East Ohio Street, Chicago, Ill. Price, $350.

Rie Nie All Rubber Patch is a prepared patch for the motorist, combining patch and cement in a superior article that is applied to the tube puncture with the hands, without the use of tools, and is vulcanized into place by the heat generated by the tire running on the road. Rie Nie patches are made from pure gum rubber

and the best rubber cement obtainable. The manufacturer states that the patch is positively leak proof and makes a lasting repair for rubber goods of all kinds.

Manufactured by the Durkee-Atwood Co., Minneapolis, Cleveland and Toronto. Prices on request.

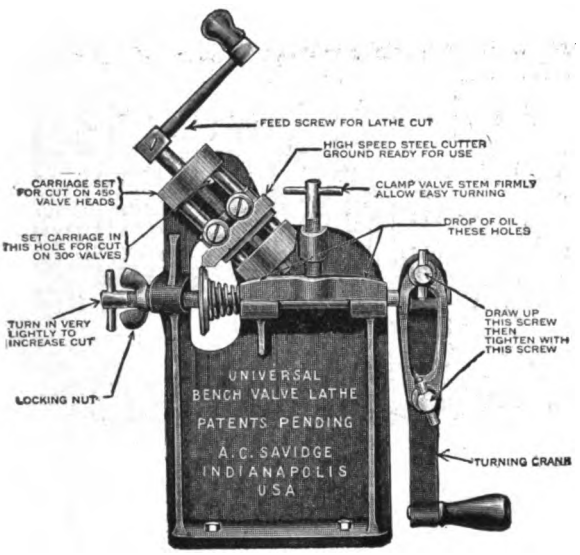
"Tribune" Camshaft Bearing Aligning Tool for Ford Engines is designed to accurately ream the rear camshaft bearing in the Ford engine and align it correctly with the center and front camshaft bearings. The tool consists of a steel bar of the right size, equipped with two dummy bushings that replace the center and front bushings of the camshaft. After the old

bushings have been removed the rear bushing is replaced with a new one, the reamer is fitted in place and the two bushings on the shaft are locked in place by means of set screws in the same position as the old bushings. In this manner the reamer cuts the rear bushing in line with those of the center and front bearings. The cutter in the tool is easily replaced

when dull so that the life of the tool is practically indefinite. The center and front bushings are usually replaced with new when worn so that the tool need not be used when fitting these two bushings. It is made of hardened steel and finished in a workmanlike manner.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, $5.75.

Digitized by Google



The Savidge Universal Valve Lathe is designed primarily for the service station repair shop. It is a bench tool, combining the desirable features of much higher priced machines, is very simple to operate and does it work with accuracy.

This lathe, it is stated, will reface any valve with 30 to 45-degree heads up to 2½ inches in diameter, and will true the hardest steel, as well as cast iron valve heads.

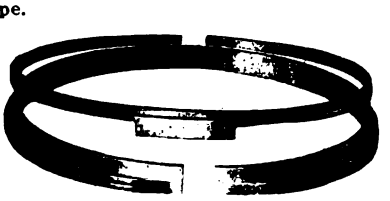
The valve lathe consists of a base casting that fastens to the bench, a detachable, adjustable turning handle, a removable block placed over the valve stem when refacing the valve, an adjusting screw and spring holding valve face in correct relation with cutter, a high speed steel cutter ground ready for use, a feed screw controlling the cutting tool, an adjusting carriage for 30 or 45-degree valves, and an adjustable screw with wing nut, allowing the tension on the valve head to be increased or decreased.

The Savidge valve lathe is manufactured from the best grades of iron and steel, is finished in gray, nickel plated, and they are guaranteed, the manufacturer agreeing to repair or replace at his option, without charge, except for transportation, any lathe which proves defective, if returned to the factory within one year from date of purchase.

Manufactured by the A. C. Savidge Co., Indianapolis, Ind. Price, complete with high speed cutter, ready for use, $12; extra cutter, $1.20.

Ingram Triple Seal Piston Rings show an entirely new thought in design of a two-piece piston ring. They are of two types, regular and De Luxe, which are inserted into piston grooves as one-piece rings and are securely sealed at three points and locked by a lip, thus preventing either of the rings oscillating over the other and opening joints. The locking lip is not an extra part, but is cast as part of the ring itself. Owing to the locking lip securely sealing the joint of the lower ring, while it permits of equal expansion, it at the same time provides a continuous seal at both joints, which prevents the leakage of compression and by-passing of lubricating oil. When the joint of the lower ring opens any distance the opening is protected by the entirely closed upper ring at the point of its positive locking device, the lip. When the ends of the upper ring open any distance on the other side, opposite the locking lip, they are sealed by the lower ring. These rings are sealed at three points, over the face and back of the joints. They have equal expansion and contraction for their entire circumferences and give a perfectly equalized contact with the cylinder wall.

The Ingram triple seal piston rings are made from individual castings, of a special mixture of gray iron, and are manufactured to a high degree of finish by improved methods by which the manufacturer claims accurate sizes and that 100 per cent. of their rings are the true round shape.

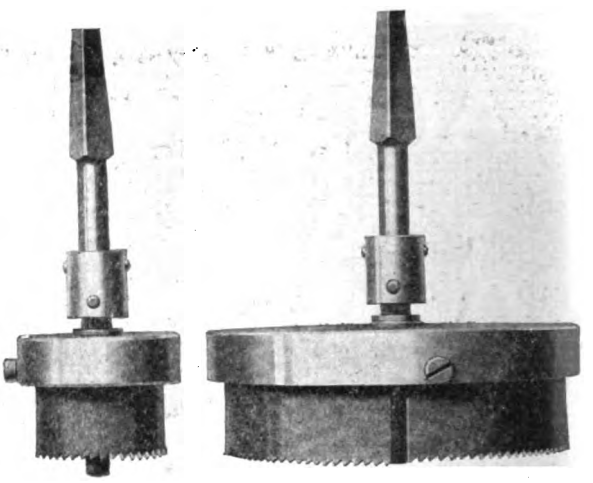


The lower ring is offset, over which the upper ring snugly fits, and the surfaces of rings are provided with oil retaining grooves. The upper ring has a lip that locks the two rings and prevents one ring from sliding around the other and opening the ends. The locking lip also securely locks both rings against any upward or downward motion at the joint.

When cylinders wear larger in the course of long usage it is not necessary to regrind them on account of the perfect wearing contact of these rings on the cylinder walls, which is due to the extraordinary long life of the rolled radial tension put into the rings, also due to their perfect expansion and contact all around

the cylinder wall they show the least tendency to rub and wear the cylinder wall "out of round." The radial tension is put into the rings by the rolling method, which also rolls the name of the ring on the innerside. This is patented and used exclusively by the manufacturer of these rings. The leakage of compression and by-passage of oil with these rings is limited to a maximum of two per cent.

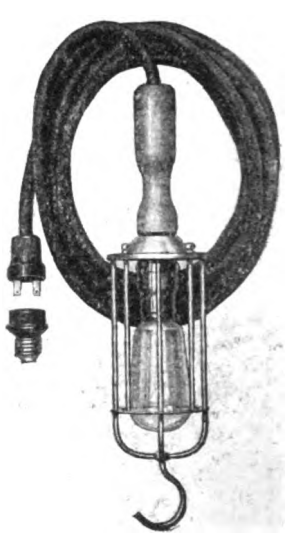
Manufactured by the Ingram Motor Co., Globe Building, 800 Broad Street, Newark, N. J. Prices, De Luxe type, $1.50 to $2.25 each; Ford, per set of 12, $15; regular type, $1.35 to $2. Regular type Ford special, per set of 12, $12.



A New Tool for Cutting Round Holes in Instrument Board of Ford Cars is designed for jobbers and dealers supplying fittings for the new Ford cars equipped with a metal covered instrument board. The two cutting blades are similar to those used in a hack saw, having been tempered and rounded to fit the casting. If a blade is broken a new one is inserted by loosening a set screw. It is stated that by using this tool and a regular hand-curved blade, one can readily cut through the metal covered board in about 1½ minutes.

Manufactured by the Van Sicklen Speedometer Co., Elgin, Ill. Price to the dealer or jobber, $3.

The Duracord Extension Lamp is designed for hard service in and about the garage or service station where the cord comes in contact with the wheels of cars or trucks, and is liable to kink or break, exposing the wires to short circuits. It is stated that Duracord eliminates this trouble, as it is woven in tubular form, covering the rubber insulation of the wire completely, and is made of a material that will stand severe usage without breaking or pulling apart. A special feature of Duracord is the method of fastening the



cable to the handle of the lamp, a patented "hold fast" fitting being provided in the handle, which takes all the strain from the terminals and puts it on the cord itself. It is stated that this feature obviates the possibility of the individual wires pulling away from the terminals. Duracord is a portable cord having a special cover woven from heavy cotton yarn, made similarly to fire hose, and will not scratch highly polished surfaces such as are presented on automobiles.

Manufactured by Tubular Woven Fabric Co., Pawtucket, R. I. Prices on request.

Digitized by Google

White Stripe Transmission Lining for Ford Cars is made by a new method of weaving, using two separate sets of threads, one set constitutes a frame work running crosswise and lengthwise. Over this is a separate set of wearing

threads, which protect the frame work of the binding threads completely, it is stated, so that white stripe will not come to pieces as soon as the surface threads are worn through. On the contrary, when the surface threads are entirely worn away, there still remains a complete webbing composed of cross and lengthwise binding threads.

To make White Stripe Transmission Lining it was necessary to construct special looms. The wearing threads in White Stripe lining are of the finest quality hose cord yarn, with 21-ply filler in the cross strands, giving great strength, and preventing side spread. Every strand of White Stripe is treated in such a way as to keep the fabric soft and protect it from the hardening effect of hot oil and friction, producing a smooth grip and long wearing qualities.

Manufactured by the Advance Auto Accessories Corporation, 56 East Randolph Street, Chicago, Ill. Prices and literature on application.

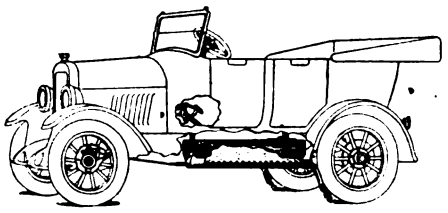
The Red Star Timer for Ford Cars is designed for the discriminating motorist who wishes to get the utmost power from his Ford car. The timer case is a metal stamping having an insulated ring of hard fiber fitted inside, in which are mortised contact shoes. It is stated that the wear occurs evenly and smoothly and that the race does not get pitted or bumpy.

The cam roller consists of a hardened steel arm to which is attached the roller contact. This contact works on the principle of a roller on a roller, that is, the pin supporting the inner roller is made fast to it, while the larger contact roller is allowed to roll freely. It is stated that this feature insures a smooth working, accurate timer that cannot drag or wear angular, as it rolls in perfect contact with the race at all times.

Manufactured by the Auto Components, Inc., 56 East Randolph Street, Chicago, Ill. Price, in the United States, $2; in Canada, $2.75.

The Antiskid-Sander for Automobiles and Trucks is a new device for which the inventor has recently obtained a patent. It is in two forms, in one of which the sand box is fitted to the running board of the car, one at each side, the sand being moved by a spiral extending the full length of the box and driven by a shaft partly rigid and partly flexible, from a gear attached to the front wheel hub on either side. The sand is forced from the boxes into tubes leading down and in front of the rear tires. The device is operated by a suitable pedal connected with the brake pedal and being operated by the foot brake.

A second form of the device stores the sand in two boxes placed under the rear seat at either side, the sand falling by gravity through two tubes extending down in front of the rear tires. A shut-



ter at the bottom of the boxes is opened by a pull cord passing over pulleys from the steering column. The shutter is closed by spring action. A small pin, located in a metal box fastened to the steering column, operates the cord to the shutter. Pressing down the pin opens the shutter, while pulling it upwards closes it.

The device is not at present being manufactured, but interested parties can obtain full information by writing the inventor.

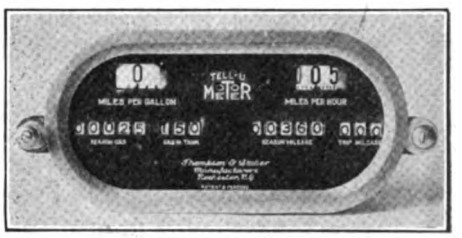
Invented by David Kupfer, care of Henry Kupfer & Son, 118-120 East 51st Street, Chicago, Ill.

The Tell-U-Motor-Meter is a small dashboard instrument about the size of the average speedometer, rectangular in shape, having an elliptical dial on which are plainly shown the total season gasoline used by the engine, the amount of gasoline in the tank and the miles made per gallon. The amount of gasoline in the tank is registered by the motorist when gasoline is filled into the tank, by turning a small thumb screw at the side. While the miles per gallon and the season mileage of the gasoline is obtained through a connection to the vacuum tank, the gasoline meter operates from the vacuum created by the suction of the pistons in the engine cylinders.

The instrument is also equipped with a regular standard speedometer of the magnetic type, which may be either operated from the hub of a front wheel, or from the drive shaft of the car. The speedometer gives the miles per hour, season mileage and trip mileage.

This instrument has been appropriately called the "Automobile Bookkeeper," as it gives the motorist the information he requires in regard to the fuel cost of operating his car. This device may also be found valuable to truck owners as its use gives a continuous check on the amount of gasoline consumed.

It is stated that at every 10th of a gallon the instrument is automatically corrected. Thus, for instance, if it shows 15 miles a gallon for some hundred miles, with the carburetor adjusted correctly,

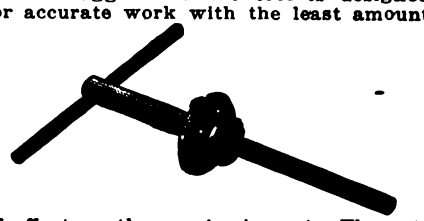


should something else happen to cut down the number of miles, the driver is informed of that fact before more than 1/10 of a gallon has been consumed under the new conditions.

The device is intended primarily for the motorist and not merely for the car manufacturer. It is not expensive, and the fact that it is claimed to be unfailing, accurate and furnishes information that every motorist wants, is expected to make it popular for use on passenger cars and commercial vehicles.

Manufactured by Thompson & Stuber, Rochester, N. Y. Prices and literature on application.

The Junior Safety Reamer for Ford and Fordson is designed to true the valve seats of the Ford and Fordson engine and keep the valves gas tight. The construction is rugged and the tool is designed for accurate work with the least amount



of effort on the repairer's part. The cutter is made of hardened steel and is capable of cutting a true seat, it is stated, regardless of the amount of pressure placed on the reamer T handle by the operator. It is claimed that anyone can

use the Junior reamer, as the depth of the cut is not measured by the pressure applied, but by the setting of the high-speed steel cutter.

Manufactured by the A. C. Savidge Co., Indianapolis, Ind. Price, in carton, $2.25; extra cutters, 60 cents each.

The Greb Bearing and Race Attachment No. 2 is designed to be inserted behind magneto, electric generator and starter bearings and races where it is impossible for the jaws of a puller to be attached. The device is provided with a knife edge which makes insertion easy,

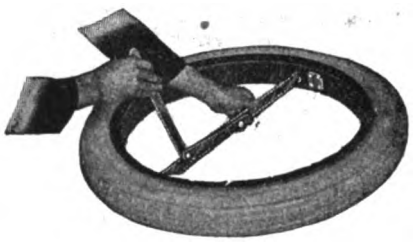
while the puller may be fastened to the attachment and the race or bearing easily pulled. It consists of a two-piece forging, joined by two stud bolts, and tightened by two wing nuts after being located back of the race or bearing.

Manufactured by the Greb Co., Inc., 172-3 State Street, Boston, Mass. Price, $4.

Digitized by Google

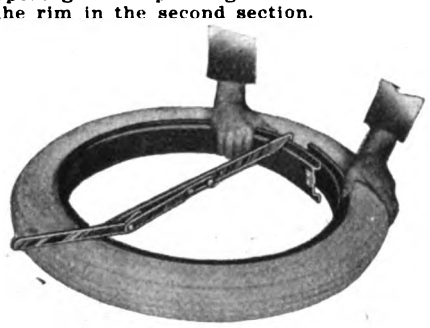
The "G T L" Push and Pull Rim Tool is designed for removing tires from demountable rims with the least effort. The power of the tool, it is stated, is multiplied one to nine, so that by applying a force of 100 pounds to the handle, a 900-pound pressure is exerted at the rim.

The tool is of durable construction, being made of steel throughout, consisting



of two sections, easily assembled when needed for the different sized rims from 30 to 36 inches in diameter.

The larger section consists of a long steel bar, having a hook at one end, and turned flanged edges in which the second section slides when opening or closing the rim. The handle is attached to the first section, a short distance from the hook, and to this is fastened a short bar of steel, having a slot in one end, which fits the opening corresponding with the size of the rim in the second section.



The second section is also provided with a hooked end, similar to the first, these ends slipping over the edge of the rim when being opened or closed.

The tool is made throughout of the best of material and, it is stated, will do practically all work without the use of other tools.

Manufactured by the Metal Products Manufacturing Co., 2416 University Avenue, Minnapolis, Minn. Prices, plain, $3.50; japanned, $3.75; white nickel, $4; bronze, $4.25; polished nickel, $5. Adjustable for 30, 31, 32, 33, 34, 35 and 36-inch tires.

The Huskee Two-Speed Portable Electric Drill was designed to supply an existing demand for an electric drill that would be free from objectionable features peculiar to some tools of this type, at the same time adding a few new and novel improvements that should make it particularly interesting to service station repairers. The two-speed feature is especially effective when metals of different degrees of hardness are encountered, as only a second is required to make the change from a fast to a slow speed and this may be easily done while the drill is in motion. The change of speed is accomplished by simply pulling out or pushing in a pin that is located on the bottom of the gear case.

The gears in the gear housing are attached to shafts (not studs), which gives the gearset a rigidity not otherwise obtained. The housing is grease and oil tight and simply encloses the gearset, protecting it from dust and dirt. Two spirit levels are attached to the Huskee drill, one on the side for horizontal drilling and one at the top for vertical work. This enables the repairer to see at a glance whether he is drilling straight or not.

The "lightning" switch is located in the handle, under the finger tips, and, it is stated, that this is the quickest and most positive switch in action that can be produced, and is claimed to be 100 per cent. faster than others of like type. It is guaranteed for a period of five years under any and all conditions.

With the Huskee drill is included, free of charge, a substantial wooden stand,

strong and well made, to be used as a holder for the drill when not in use. This in a measure provides insurance that the drill will be kept in proper shape for use.

The Huskee drill is furnished complete with Jacobs geared chucks, stocked regular for 110 or 220 volts, with the motor universal for alternating or direct current.

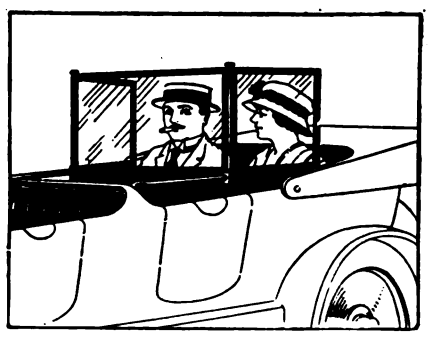
Manufactured by the Consolidated Machine Tool Co., 42-44 Southbridge Street, Worcester, Mass. Price, 110-volt, $78; 220-volt, $82. Sold by jobbing trade or may be purchased direct. Specify voltage required.

The J. H. Tonneau or Rear Seat Shield was designed and perfected with the idea of being adaptable for use on any car built and especially for use on domestic cars.

The shield is a patented device that is attached by fasteners at the rear of the front seat and when not in use can be folded down out of the way, occupying about the same space as a folded robe.

The shield consists of a main frame with two folding wings, fitted with a fine quality of glass. A removable water proof apron hangs from the bottom of the shield when in use, affording complete protection from under draughts and keeping the robes clean and dry. When not in use the apron folds over the shield, out of the way.

The shield is mounted on a pair of extending steel arms, which are attached to a pair of steel body irons securely fastened to the frame of the front seat, beneath the upholstery. The shield is firmly attached to the extending arms by means of a pair of heads. A simple turn of these allows the shield to be drawn back and to be rigedly fastened upon its main supports. Once in position, a slight push or pull will open or close the shield or place it in any position desired, where it is held by friction and the locks.

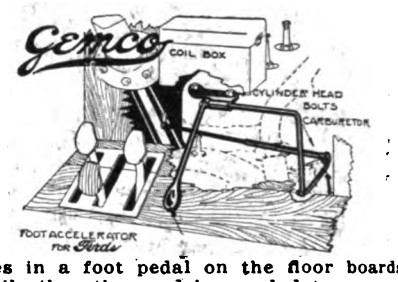


The side wings are held by friction to any angle desired by turning them as a door or shutter. Placed at an angle they deflect the wind from the passengers in the tonneau.

The J. H. tonneau shield can be easily attached to any car in a few moments time, giving the advantages of an open car, or the protection of a closed as desired.

Manufactured by the Tonneau Shield Co., Inc., 1777 Broadway, New York City. Prices on request.

The Gemco Accelerator for Ford Cars is designed to be attached in such a manner that the operation of the accelerator pedal will not tire the driver. The pedal consists of a rod bent in the form of a double letter L, attached by a hanger to the two rear engine head bolts at the top of the engine. One end of the rod termin-

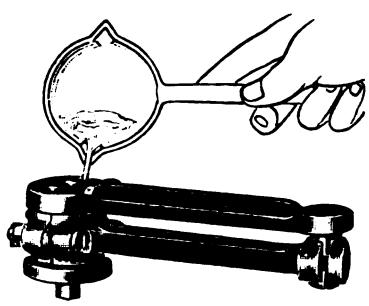


ates in a foot pedal on the floor boards, while the other end is coupled to an arm or rod fastened to the carburetor throttle rod. The action of the accelerator is stated to be entirely independent of the hand throttle and either may be worked without interfering with the other.

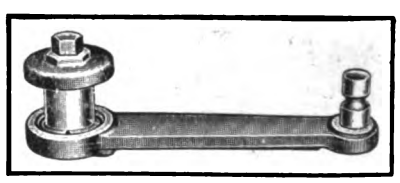
The accelerator is made throughout of the best of material and may be attached in a few moments time by any one handy with tools.

Manufactured by Gemco Manufacturing Co., Milwaukee, Wis. Prices on request.

"Tribune" Babbitting Jig is a patented device with which it is possible to pour new babbitt bearings in Ford connecting rod bearings in a simple manner. The jig consists of a pin to take the place of the



wristpin and a stud to form the arbor for the new bearing, both securely fastened at the correct distance apart on a cast arm. The arbor is equipped with a grooved cap, fastened to it by a machine bolt, while the end of the arm is provided with a groove similar to the cap which positions the bearing when held on the arbor. Holes are provided in the fixed end of the arm through which the molten babbitt is poured. The connecting rod is



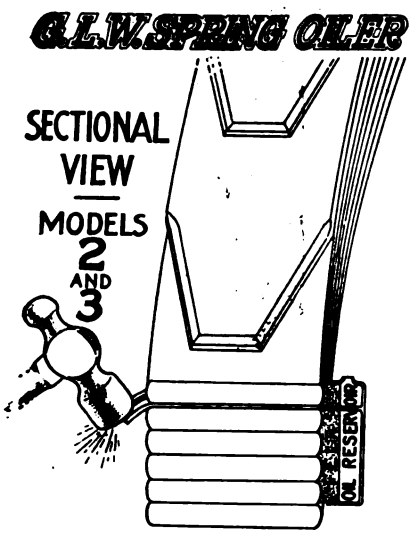
placed in the jig, the sides of the bearing fitting the grooves above and below, the jig is tightened, placed in a vise and the molten babbit poured in through the openings in the end of the arm.

The jig is made throughout of the best of material and by skilled workmen and is guaranteed to be accurate.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, $1.50 each.

Digitized by Google

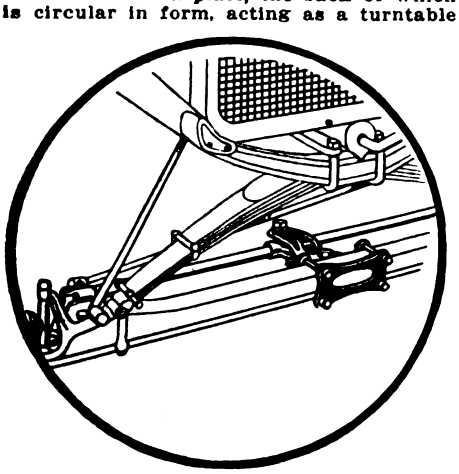
The G. L. W. Spring Oiler is designed primarily for cantilever springs, the manufacturer stating that it can also be used equally as well on springs of other types, fitting springs five inches wide or less. The oiler consists of a metal container, one side of which is filled with felt wicking, fitting snugly against the leaves of the spring at the side as shown in the illustration. The oiler is fastened to the spring by a thin strip of metal, which



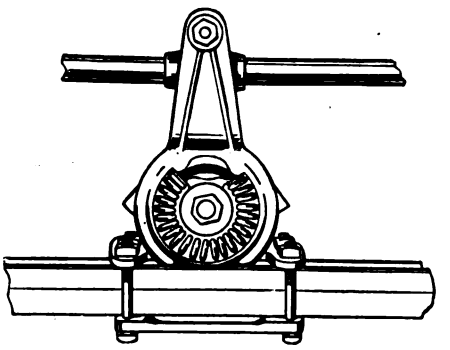
passes through between the top leaf and the leaf under it, and is attached to the spring by bending over the end with a hammer as shown. The insertion of the strip is accomplished by placing a jack under the center of the spring, raising the car body slightly, allowing the spring ends to open enough so that a screw driver can be inserted under the leaf when the strip is inserted. It is stated that this device will keep the spring leaves lubricated and free from rust and allow them to work freely without squeaking.

Manufactured by the G. L. W. Spring Oiler Co., Savoy Theater Building, San Diego, Cal. Prices and literature on request.

The Over-Land Guide for Ford Cars consists of a spring actuated attachment connecting the radius rod of the steering gear with the front axle. The device consists of a malleable iron casting shaped in the form of an arm, in three sections. The first section consists of a clamp that is fastened securely to the front axle by four bolts and a plate, the back of which is circular in form, acting as a turntable

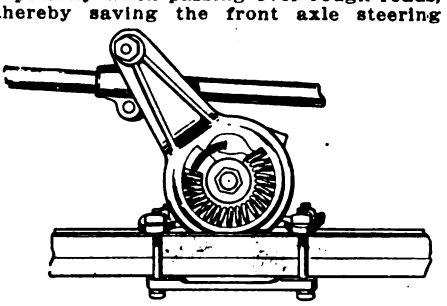


on which the movable arm travels when the steering gear is turned. The second section includes the arm, having a similar shaped circle, which is fastened to the first circle by a large bolt, the two circles being packed in cup grease and, it is stated, are practically weather proof. The third section is made up of a tubular clamp that



fastens to the radius rod, the end of the cast arm being attached to it by means of a bolt fastening. A floating spring is fitted to the circular plate of the arm, acting as a means of springing the arm back into a central position after the steering gea has been turned to either side.

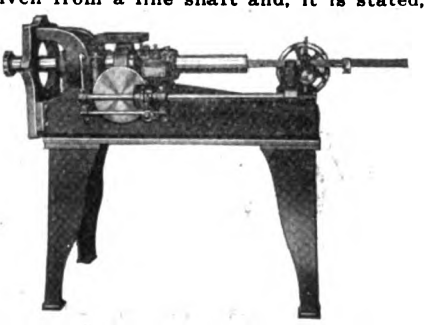
It is claimed that this device will greatly improve the steering of the Ford car, especially when passing over rough roads, thereby saving the front axle steering



gear and its component parts from excessive wear and bending of the parts. The device is made from the best of materials throughout and is guaranteed to give satisfaction.

Manufactured by the Meixell Co., 216 Board of Trade, Indianapolis, Ind. Price, $8.50, in localities where not represented by the jobbing or dealer trade.

The New Marvel No. 5 Cylinder Reboring Machine is designed for service station machine shops where a high class of cylinder reboring is desired. It is power driven from a line shaft and, it is stated,



is a great labor saver, one man being able to set the machine on a cylinder reboring job, start it, and attend to other work while the reborer is in operation.

The Marvel reboring machine is built for hard service, from the best material obtainable, by skilled workmen. It is equipped with variable feed speeds and an automatic release, enabling the owner to multiply the man power of his shop.

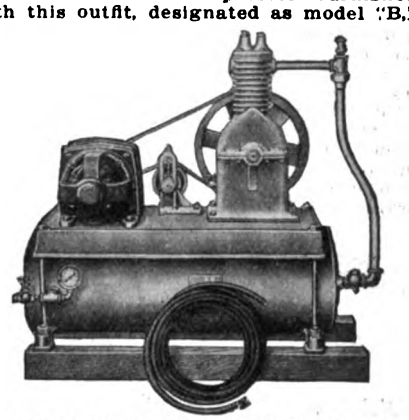
It is stated that this machine is unequalled for accuracy, speed, reliability, capacity and simplicity of operation.

Manufactured by the Marvel Machinery Co., 511 Loan and Trust building, Minneapolis, Minn. Prices and literature on application.

The Curtis Style "V" Motor Driven Stationary Air Compressor is manufactured for garage and service station work, is a self-contained outfit, including all the necessary equipment and possessing the power to successfully handle tire inflation for all sizes of passenger car tires and many of the smaller pneumatic truck tires.

The outfit consists of a steel tank capable of carrying a pressure of 150 pounds and includes gauge and safety pop valve, the necessary piping between the compressor and tank, as well as dash pot and check valve. Fifteen feet of best oil proof hose with tire chuck is included in the outfit and an alternating or direct current motor as desired.

The Curtis air compressor furnished with this outfit, designated as model "B,"



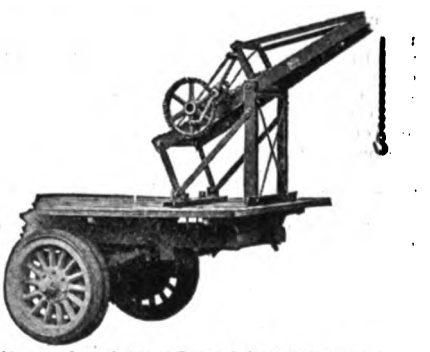
is the controlled, splashed oiled, air cooled type, with belt fan flywheel, belt tightener and leather belt drive or, if desired, may be furnished with a cut flywheel gear, raw hide pinion and gear guard. The outfit comes mounted on 4 by 4-inch hard wood skids, electric cord, push bar and hose rack not included.

This model of compressor is listed in five sizes with electric motors of five different powers, ranging from ¼ horsepower to three horsepower on the larger size. Extras may be included, if desired, with prices according.

Manufactured by the Curtis Pneumatic Machinery Co., New York office, 30 Church Street; factory, St. Louis, Mo. Prices and literature on request.

The Manley General Utility Garage Crane is designed for general use about the garage or may be mounted at the rear of a truck body and used as a wrecking crane for towing in disabled passenger cars or trucks. The General Utility crane is complete with wood portable base, mounted on roller casters, and is constructed of steel throughout, except the gearing, which is cast iron, and the base, which is seasoned white oak.

Due to its four-unit construction, it is stated, two men can take it apart and put it together again in five minutes time.



So it can be changed readily into a wrecking crane mounted on a service car or for garage use. Or it may be disassembled, taken in a touring car to the point needed and quickly reassembled.

The General Utility crane is claimed to be especially adaptable for unloading cars or trucks from freight cars, removing cars from ditches and lifting the rear or front ends of passenger cars and trucks.

Manufactured by the Manley Manufacturing Co., York, Pa. Prices, No. 100, 1½ tons capacity, weight 500 pounds, $125; No. 101, two tons capacity, weight 400 pounds, $113.

The New Burd Quick Seating Piston Ring is of the step-joint type, the outer surface, which comes in contact with the cylinder wall, having raised edges, which wear down quickly, it is stated, seating perfectly with a glass-like surface in harmony with the cylinder wall, in about 45 minutes. A channel, .002 of an inch in depth is in the center of the face and carries an oil film that prevents cylinder wear during the seating process.

In automobile cylinders that have been run for some length of time the inside cylinder walls attain a hard, glass-like surface. The piston rings attain a similar surface, which is desirable and necessary for obtaining maximum efficiency, and until a piston ring does obtain such a surface there is considerable loss of power, wastage of gasoline and lubricating oil.

There has long been a demand from garages and repair shops for a piston ring

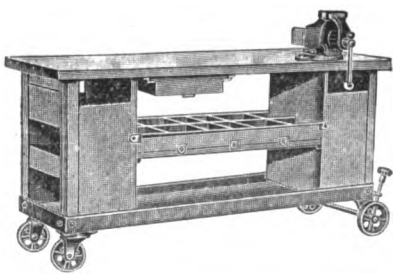
having the quick seating feature of a narrow ring, combined with the wall pressure tension of a wide ring.

The Burd quick seating ring is made of the highest quality dense tough gray iron, filtered so that all impurities are removed to insure absolute uniformity of metal texture, maximum strength and resiliency, prompt and perfect seating and freedom from flaws, porous spots and other defects. They are ground to micrometric accuracy of .00025 of an inch, are exceptionally resilient, exert an unvaried wall pressure and, it is stated, will not break down under cylinder heat conditions. The Burd quick seating piston ring promptly adjusts itself to a new or worn cylinder, within reasonable limitations, and perfect seating is obtained almost immediately.

Manufactured by the Burd High Compression Ring Co., Rockford, Ill. Rings are made in all sizes and for practically every make and model of engine, sizes up to four inches inclusive, retailing at 60 cents each; over four inches and up to five inches, 70 cents each.

Manley Portable Work Benches Nos. 201 and 202 are designed respectively for small garages and the larger service stations. It is of substantial steel construction throughout with the exception of the wood top, which is of heavy two-inch oak planking, to which the vise and other tools may be fastened. The steel drawers are provided with wood partitions and are guaranteed not to bind. The bench is mounted on steel roller casters and is equipped with a locking device, so that work may be performed at the vise in similar manner as at a stationary work bench.

All tools necessary for a certain repair job may be carried on this portable work bench and, it is stated, saves unnecessary steps while doing the work. The Manley

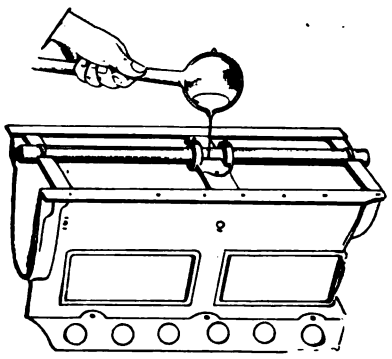


portable work bench No. 201 is small and light and is intended primarily for minor repairs and service work. Bench top is 44 inches long by 13 inches wide and 34 inches high, weighing 150 pounds.

The Manley portable work bench No. 202 is larger and heavier and intended for use mostly in general repair shop work. The bench top is 64 inches long by 20 inches wide and 34 inches high, weighing 300 pounds.

Manufactured by the Manley Manufacturing Co., York, Pa. Prices, No. 201, $38; No. 202, $52.

"Tribune" Rebabbitting Fixture for Ford Engines is designed to provide a quick and easy means of rebabbitting



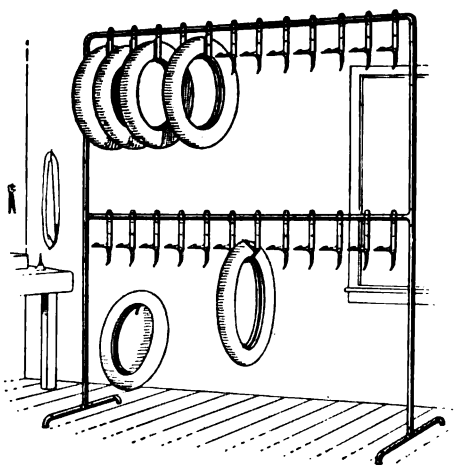
the main bearings of the Ford engine. The fixture consists of a shaft the exact size of the crankshaft, and long enough to reach from the outside of the front bearing to the outside of the rear one. On this

shaft are two loose collars, which are just the thickness the bearing metal should be. The two larger collars are movable, are machined on the sides so that they will fit perfectly to the crankcase bearings and

also have a projection that extends over the bearing at the top. The collars are movable, and it is possible to pour all bearings in a similar manner.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, $10.

The Mankey System for Tire Display is designed for rapid handling of tire sales, either in the garage, service station or sundry supply houses. By its use tires are hung on patented hooks, clamped to a pipe



that may be stood upon the floor or suspended from the ceiling. This type of storage facilitates tire sorting, freedom from dust and the damage liable when tires are piled loose on the floor.

The patented hanger consists of two flat strips of steel held together by two rivets, one at the center and the second at the bottom. The lower rivet acts as a fulcrum or hinged joint for the patented hook, while the upper rivet is used as a fastener for the catch on the hook.

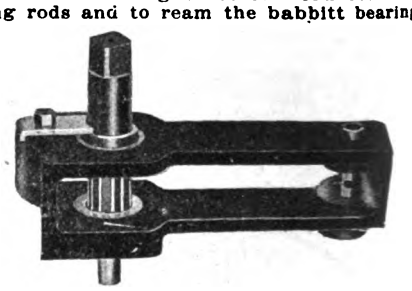
The center bearing of the hook is slotted so that in placing a tire on the hook a natural motion is employed to push the hook upward, allowing the catch to slip over the rivet, while the weight of the tire on the hook slips the catch into place, a spring held in place between the flat steel sides aiding the catch to seat. In

removing the tire from the hook, simply lifting the tire removes the spring tension, freeing the catch and allows the tire to swing forward and downward, causing the tire to slip out of the hook easily. The upper ends of the flat steel strips form a clamp that fits the pipe of the display stand.

The stands are made in various sizes, accommodating one, two, three or four dozen tires as desired. The suspension hooks are finished either in black enamel or nickel and in either large or small sizes, to suit the convenience of the purchaser. They may be purchased separate or in dozen quantities, or the complete outfit can be furnished for either overhead suspension or with a floor stand.

Manufactured by the Aberdeen Wholesale Saddlery Co., Aberdeen, S. D. Prices and literature on request.

"Tribune" Connecting Rod Reaming and Testing Jig for Ford Engines is designed to test the straightness of Ford connecting rods and to ream the babbitt bearing



true. The device consists of a cast machined fixture in which the rod is placed. A wristpin is passed through the smaller opening in the fixture and through the wristpin opening in the head of the connecting rod. The rod can then be tested for straightness. After the rod has been straightened the bearing end can be reamed out the exact size of the crank-

shaft and with a true relation to the distance between the wristpin and the crankshaft.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, testing and reaming fixture, $30; reamer only, $7.50.

Two New Westinghouse Automotive Ammeters have recently been added to the Westinghouse line of instruments as type BI and type BX.

The type BI ammeter, it is stated, is an inexpensive instrument, rugged in construction, reliable and amply accurate for the service for which it is intended. The instrument operates on the polarized vane principle, without springs or moving coils,

is dead beat and is capable, it is stated, of withstanding momentary overloads of 500 amperes without injury. The dial is two inches in diameter, the scale indicating amperages from 15 to 30, charge and discharge, and is 1½ inches long. The meter will be furnished in either black dials with white figures and needles, or white dials with black figures and needles, as desired. The meter is arranged for flush mounting in the dash or cowl.

The type BX ammeter was originally designed for government radio service and is the smallest D'Arsonval instrument made. Though but two inches in body

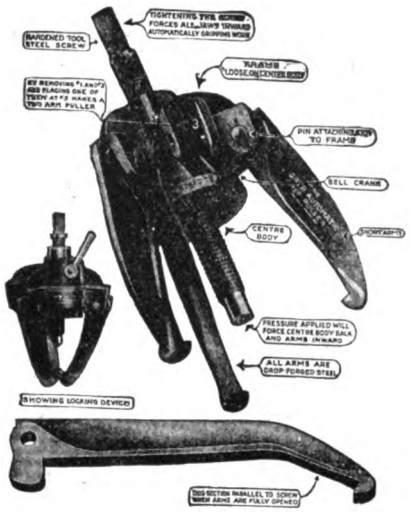
diameter, this instrument, it is claimed, possesses all of the delicacy of action, high sensibility, great accuracy and ruggedness of the standard switchboard type. The ammeter is supplied for flush as well as projection mounting. Voltmeters, with

scales ranging from three volts upwards, are also supplied in the BX type.

Manufactured by the Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa. Prices and literature on application.

The Greb Automatic Grip Puller is designed for heavy work and combines a one-man puller with a locking device, a hub having a threaded opening through which the threaded steel screw operates and another hub provided with lugs to which the arms are attached. The lower ends of the three arms are provided with hook ends to grip the gear or pulley to be pulled, while the backs of the arms are reinforced by a ribbed casting.

The No. 1 Senior size has a capacity from one to 18 inches, and is equipped with two sets of jaws, one set opening from seven to 10 inches, and the second from 12 to 18 inches. The screw is made of specially hardened steel, one inch in diameter and 14 inches long and is operated by a wrench fitting the square end at the top.



The No. 2 Junior size is designed for all types of engines and, as is stated, will remove magneto and pump shaft gears, couplings, etc. The puller has a capacity from one to seven inches, is equipped with two sets of jaws, one 3½ inches opening to four inches, and the other six inches opening to seven inches.

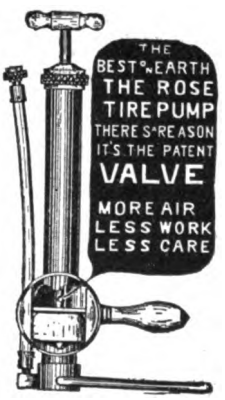
The No. 3, an intermediate size, is designed to pull average engine gears, such as timing, pinion, transmission, differential and crankshaft gears, universal joints and pulleys.

Its capacity is from one to 12 inches and the outfit is complete with two sets of jaws as follows: Five-inch jaws opening to eight inches and 9½ inches opening to 12 inches. The screw is made of hardened steel, ⅞ inch in diameter and 10 inches long.

Manufactured by the Greb Co., Inc., 172-3 State Street, Boston, Mass. Prices: No. 1, $25; No. 2, $12; No. 3, $18.

The Rose Tire Pump gets its air supply through a small opening at the bottom of the plunger rod, below the leather of the plunger. This is a patented feature employed by this manufacturer, and is claimed to eliminate the use of soft leather in the plunger and allows the use of a packing that will stand wear.

The Rose tire pump is composed of a single cylinder made of steel, hollow steel plunger rod, brass valve with leather valve washer and valve flapper. The base and top are machined from screw stock



and, it is stated, will neither break nor become loosened in the tool box. The handle of the pump is of rose wood, highly finished, while the body is finished in baked enamel. Each pump is tested three times before leaving the factory to detect imperfections. The hose is 24 inches long, five-ply fabric, with a wall of pure Para rubber.

Manufactured by J. H. Haney & Co., Hastings, Neb. Prices: 1¼ inch cylinder, $3; 1½ inch cylinder, $3.50.

Savidge Safety Seat Reamers are constructed on the plane principle. The reamer block is equipped with a high-speed steel cutter, which is said to do perfect work for an indefinite period. The cutter is easily removed in case sharpening is necessary and may be resharpened on an oil stone and readjusted by means of the cutter adjusting screw.

The reamer blocks are hardened steel

and accurately ground, the cutters are properly set and each tool tested before leaving the factory. The guide stems are interchangeable and shouldered on the ground surface of the reamer block to insure accuracy. With each stem or set of reamers is furnished a locking bar to quickly attach or detach the guide stem from the handle without the use of pliers.

It is stated that it can easily be told by the feel when a perfect job is done with the Savidge reamer, as the high-speed steel cutter will miss the low spots, taking off the least material possible until the seat is perfectly formed. The cutter cannot dig in, it is claimed, no matter how much pressure is applied, for it is set for the lightest possible cut.

The Savidge reamer set includes one handle stem with T bar, 5/16, ⅜ and 7/16-inch guide stems; 1⅝, 1⅞, 2, 2⅛ and 2¼-inch reamer blocks with high-speed cutters ready for use.

Manufactured by the A. G. Savidge Co., Indianapolis, Ind. Price, complete, $20.

The Howe Timer for Ford Engines is designed to operate without oil and to facilitate starting of the engine in cold weather. The timer shell is made of heavy gauge stamped metal, finished in heavy nickel plate, while the insulating fiber is of the best bone hard, natural seasoned stock. The steel contact segments are unusually long, well machined and accurately trued up with fiber surface.

The distributing finger or brush is unique in construction, differing from usual practise, as instead of a roller, a sliding contact consisting of two sections is used, forming a shoe, held in place on the brush arm by spring tension and

the riveted end of brush arm. The first section has a sharp edge, which cleans the surface of the segments, the second section following making the contact and closing the circuit. This shoe and the long segments are made of hardened steel, which resist wear.

Manufactured by the Howe Lamp & Manufacturing Co., 115-123 E. Ontario Street, Chicago, Ill. Price, $1.75.

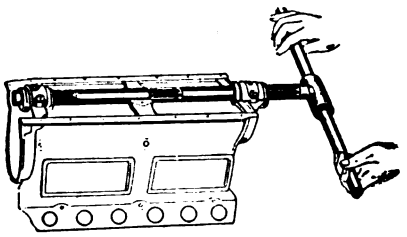
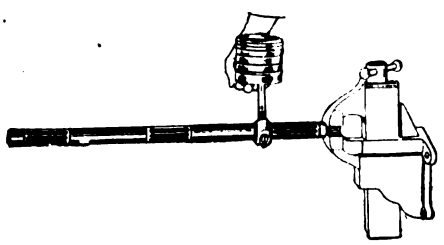
"Tribune" Crankshaft Bearing Aligning and Connecting Rod Bearing Reamer is designed to simplify the fitting of the main and connecting rods, thus reducing the amount of hand work.



The tool consists of a set of three reamers and three pilots formed on a single steel rod and having a squared end to which can be attached a handle for turning the reamers. The pilots are placed in the main bearings of the engine after the crankshaft has been removed, the bearing caps are tightened down and all three bearings reamed at one time. This method

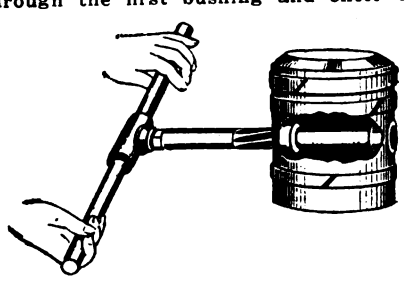
precisely aligns the three bearings and fits them accurately with the crankshaft. The pilots are made .005 of an inch less in diameter than the blades of the reamer, this being found to remove the required amount of babbitt from a worn set of bearings to give a perfect fit.



When used as a connecting rod reamer the tool is clamped in a vise, the connecting rod bearings are taken one at a time, clamped to the pilot and reamed to exact size, the connecting rod being turned by hand.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, $12.

"Tribune" Piston Pin Bushing Reamer is designed to ream the bushings in the piston bosses. It is made up of two pilots besides the reamer. The front pilot is the size of the new bushing and will pass through the first bushing and enter the



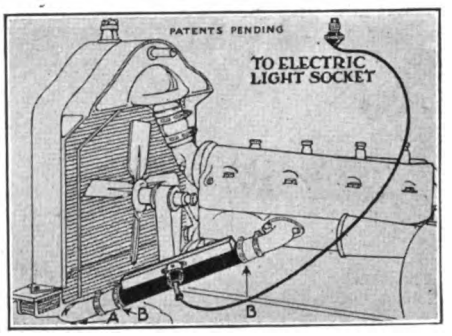
second before the reamer reaches the first bushing. This keeps the reamer in line. The second pilot is the size of the reamer after the bushing has been reamed and causes the reamer to line up both bushings correctly.

The tool is made of a high grade steel, ground and hardened accurately. It is stated to be fool proof and that it does not require expert workmen to operate it.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, $3.75.

The Mayall Engine Heater is designed to be installed in the circulating system of an automobile to keep the water warm and the automobile ready for instantaneous service in any weather and in any garage whether steam heated or not.

The Mayall engine heater is an electrical device, easily and quickly installed by the motor car owner and may be retained as a permanent part of the car equipment. Its operation is very simple. Connection is made to any convenient lamp socket in the garage and the current turned on. When not in use the wire

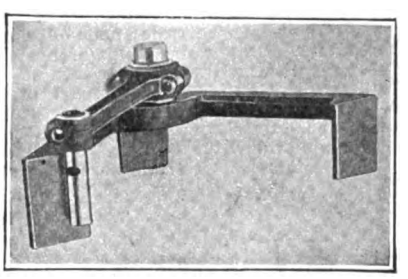


and plug are coiled and tied up out of the way of the working parts of the engine.

The principle of this heater is exactly the same as that of the hot water heating system in a house. The water is heated at approximately the lowest point in the system and naturally rises, creating a continuous circulation. It is stated that the coil in the heater uses about one-half the amount of current needed to operate an electric iron or toaster.

Manufactured by the Knight Metal Products Co., 259 East Willis Avenue, Detroit, Mich. Sold under an absolute one-year guarantee. Price, including extension cord, Ford size, $10. Other sizes will soon be in production. Jobber and dealer trade solicited.

The "Tribune" Connecting Rod Testing Fixture for Ford Cars is designed for testing the alignment of Ford connecting rods and for showing quickly whether or not the rods are bent.



The fixture consists of a three-legged stand, the two outer legs of which are joined to the center leg by arms, the fixture being a one-piece casting. To test a connecting rod, fit the crankshaft end over the large stud at the center, which is the exact size of the Ford crankshaft bearing. Swing the rod in one direction until the piston pin seats against the flat surface. This will show whether the rod is bent. If it is it should be straightened. Then swing the rod in the opposite direction until it touches the other flat plate. This will show if the rod is twisted. When the piston pin rests perfectly parallel with the flat plates the rod is straight. It is manufactured from the best of materials and guaranteed to give accurate results.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price, $8.

The Manley Engine Stand is especially designed to hold the engine in such a position that the repairer can perform work upon it with a greater degree of accuracy, is enabled to see his work better and can turn the engine to any desired angle.

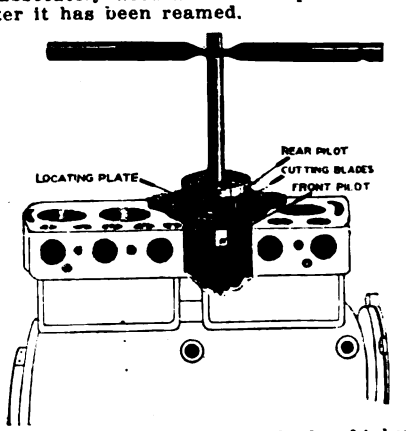
The stand can be purchased mounted or unmounted as desired. When mounted on roller casters it is easily movable to any part of the service station by one man. It consists of a heavy base of angle steel, on

which is mounted the two cast uprights holding the engine frame. The frame is pivoted at the sides to the uprights by heavy shafts, which turn in heavy bearings in the uprights. Slots in the sides of the uprights are connected to the ends of the frame at each side by heavy straps, which allow it to be turned to and fastened at any desired angle. Cross members at the ends provide for lateral adjustment of the frame, so that engines of different widths are accommodated easily and, it is stated, engines of three-point suspension are as easily handled in this frame as four-point.

The Manley stand is manufactured throughout of the best of materials, by men experienced in this class of work.

Manufactured by the Manley Manufacturing Co., York, Pa. Prices, regular stand, plain and geared, stationary, $48; portable. $59; commercial type stand, plain and geared, stationary, $63; portable, $74.

"Tribune" Cylinder Reamer for Ford Cars is designed for rapid reaming of Ford engine cylinders and consists of a locating plate which is fastened to the head of the cylinder, a front pilot which is inserted into the cylinder before the locating plate is fastened down, cutting blades which are sharpened and cut only at the front end, and the rear pilot, which is the same size as the reamer. This method is claimed to give a cylinder that is absolutely accurate from top to bottom after it has been reamed.



The reamer is made of the highest grade of steel and is said to need regrinding only at infrequent intervals and that it can be done by any mechanic who understands grinding tool steel.

Manufactured by the Tribune Engineering Co., Oswego, N. Y. Price for 1-32 (.031) oversize pistons, complete, $20. Any special over-size for Ford cylinders, $25.

RECORD OF BUILDING OPERATIONS FOR MARCH

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

CONTEMPLATED PLANS AND SPECIFICATIONS.

Birmingham, Ala.; Smith-Throckmorton-Schultz Real Estate & Investment Co.; one-story brick garage, 50x100; $15,000.

Little Rock, Ark.; Andrew H. Scott; two-story auto show room, 50x140; tile floor, electric elevator. Lessee, Universal Motor Co.

Hartford, Conn.; A. Goldstein, 398 Windsor street; two-story brick garage, 100x108; $75,000.

New Haven, Conn.; C. H. Abramowitz, 42 Church street; one-story garage and show room, 40x190. Lessee, Vim Truck Co., 260 State street.

South Manchester, Conn.; Stevensant & Williams, 135 East Middle turnpike; one-story brick garage, 80x195; $55,000.

Washington, D. C.; James A. Benson; two-story brick and hollow tile garage, 75x120.

Washington, D. C.; W. A. Luke, care of Aikinson & White, 818 Connecticut avenue; one-story brick and concrete privat garage at 2301 S street; $5000.

Daytona, Fla.; Horton Brothers; one-story garage, 110x115; stucco front with colored tile coping.

Key West, Fla.; Trevor & Morris; one-story garage, 50x150.

St. Petersburg, Fla.; C. L. Kiplinger; two-story garage; $2000.

St. Petersburg, Fla.; Cleve Leneave; two-story garage; $2500.

Tampa, Fla.; J. C. Davis; one-story garage, 50x100; $20,000.

Atlanta, Ga.; C. A. Sesson; one-story brick garage; $18,000.

Atlanta, Ga.; Randall Brothers; one-story brick and hollow tile garage; $29,000.

Chicago, Ill.; Rissman & Hirschfield, 139 North Clark street; one-story brick and stone trim garage, 93x125, at Sunnyside and Clark streets; $35,000.

Chicago, Ill.; Olsen & Urbin, 155 North Clark street; one-story brick and stone private garage at 532 North Paulina street; $2500.

Chicago, Ill.; L. Larocca, 1600 South Michigan avenue; one-story brick and stone garage, 80x125, at 4794 South Wabash avenue; $35,000.

Chicago, Ill.; J. E. Anderson, 19 South La Salle street; one-story garage at 2272 Logan boulevard; $3500.

Chicago, Ill.; Frank X. Madd, 4301 West Madison street; one-story brick garage, 50x175, at 4136 West Madison street; $20,000.

Chicago, Ill.; J. J. Novy, 2434 South Ridgeway avenue; one-story brick private garage, 25x54; $4500.

Chicago, Ill.; N. Swanson, 645 Drexel avenue; one-story brick private garage, 19x34; $2800.

Chicago, Ill.; S. S. David Warehouse Co., 2616 Milwaukee avenue; one-story brick and reinforced concrete garage, 75x90, at 484 North Clark street.

Chicago, Ill.; E. Bausenbach; one-story brick garage, 50x150, at Thorndale street and Broadway.

Chicago, Ill.; E. E. Beach, care of W. P. Whitney, 122 South Michigan avenue; one-story brick sales room and service station, 25x160; $45,000.

Chicago, Ill.; Mrs. T. Towney, 6633 Ellis avenue; one-story brick and stone garage, 72x120, on 75th street, between Jeferey and Euclid avenues; $25,000.

Chicago, Ill.; Henry Apelbach, 111 West Monroe street; two-story brick and reinforced concrete public garage, 100x100, at Grand avenue and Cass street; $50,000.

Forest Park, Ill.; E. H. Bosenberg, Adams and Hannah streets; one-story brick private garage, 24x36; $2500.

Kewanee, Ill.; Fisher & Pickerel; two-story brick auto display and sales room; $15,000.

Kewanee, Ill.; William Pierce; three-story brick public garage; $150,000.

Marion, Ill.; Davis Brothers; two-story brick and reinforced concrete garage, 85x115; $85,000.

Oak Park, Ill.; Harry E. Stevens, 4231 West Monroe street; one-story brick sales room, 52x75; $16,000.

Bloomington, Ind.; Dell Garage Co.; one-story brick garage, 60x80.

Boswell, Ind.; W. H. Cook; one-story brick and stone trim commercial garage, 60x120; $30,000.

Fort Wayne, Ind.; E. W. Stemhart Co., 11th and Meridian streets; three-story brick, reinforced concrete and terra cotta garage and sales room; $150,000.

Hartford City, Ind.; Hartford City Vulcanizing Co., 116 East Washington street; one-story brick and concrete garage, 60x120.

Indianapolis, Ind.; Indianapolis Auto Hotel Co., Inc., 130 South Pennsylvania street; six-story commercial garage, 97x202, at Wabash and Delaware avenues.

Indianapolis, Ind.; George H. Moore, 213 Lenicke building; two-story garage and sales room, 60x200, at 1025 North Meridian street; $75,000.

Lafayette, Ind.; Big Four Sales Co.; one-story commercial garage, 66x85, at Third and Alabama streets; $20,000.

Washington, Ia.; C. J. Wilson; one-story brick garage, 44x120; $25,000.

Hutchinson, Kan.; J. J. Dearth; two-story brick and stone trim garage, 50x150; $38,000.

Hugoton, Kan.; H. E. Downs; one-story garage, 75x120; $21,000.

Topeka, Kan.; Trefry Motor Co., 1014 Kansas avenue; three-story brick reinforced concrete and stone trim garage, 75x100, at Ninth and Quincy streets; $100,000.

Topeka, Kan.; George Seybold, 1015 Kansas avenue; one-story brick and stone trim garage, 50x75, at 1013 Kansas avenue.

Wellington, Kan.; Frederick Sellerts; one-story brick and stone trim garage, 100x140; $25,000.

Louisville, Ky.; Mahan Bowman Co.; one-story brick garage; $20,000.

Welsh, La.; Welsh Motor Car Co.; one-story brick garage; $20,000.

Baltimore, Md.; Charles H. Steffey, 18 East Lexington street; one-story garage and sales room, 120x150.

Baltimore, Md.; Baltimore Buggy Top Co., 107 Mount Royal avenue; one-story garage and repair shop, 90x162.

Baltimore, Md.; Forrest Park Garage Co.; one-story garage, 88x168.

Baltimore, Md.; W. E. Harn Co., 2314 Oak street; one-story garage, 50x100; for H. L. & E. L. Blum; $20,000.

Bladensburg, Md.; Washington Sand & Gravel Co., Munsey building, Washington, D. C.; one-story concrete garage, 50x160.

Easton, Md.; J. B. Clark; two-story brick garage and sales room, 100x250; $50,000.

Detroit, Mich.; Frank Knoblock, St. Aubin and Superior streets; one-story brick garage, 60x100.

Detroit, Mich.; John J. Waynn, Jr., 721 Ford building; two-story brick garage, 60x140; $25,000.

Detroit, Mich.; W. D. Block Motor Co., 1225 Woodward street; three-story brick, reinforced concrete and terra cotta garage, sales room and service station; $200,000.

Detroit, Mich.; Winer & Fuller, 231 East Faliner street; one-story brick garage, 148x171, at 190 Garfield street; $20,000.

Flint, Mich.; Marshall Auto Co.; two-story brick, stone and reinforced concrete garage, 50x183, at Fourth and Court streets; $50,000.

Hillsdale, Mich.; Pinkham & Wright; one-story garage and repair shop, 150x270; $40,000.

Muskegon, Mich.; C. A. Will & Son; one-story brick garage, 60x76; $25,000.

Olivet, Mich.; Adelfried Kellog and Frank Hazzard; one-story brick garage, 44x90; $80,000.

Owosso, Mich.; Owosso Sugar Co.; one-story brick garage, 50x60; $15,000.

Roscommon, Mich.; J. H. Dye; one-story brick and hollow tile garage, 50x80; $15,000.

Cambridge, Minn.; E. F. Gillespie; one-story brick and concrete public garage, 50x100; $12,000.

Minneapolis, Minn.; Johnson Tire Co., 1010 Nicollet avenue; one-story brick auto service garage at 13th and Mary place; $10,000.

Robinsdale, Minn.; Joseph Foss, Fairbault, Minn.; two-story garage, 66x106; $33,000.

St. James, Minn.; North Star Garage; one-story brick public garage, 60x90.

St. Paul, Minn.; Eric Strandloff, 1676 Wesley avenue; one-story brick garage, 60x121; $15,000.

St. Paul, Minn.; Edward F. Swanson, 816 University avenue; one-story brick and reinforced concrete garage, 48x104.

Zumbrota, Minn.; J. N. Groner; one-story concrete and tile garage, 60x110.

Greenwood, Miss.; Schilling Auto Co.; two-story garge, 150x150.

Bethany, Mo.; Charles Hacker & Son; two-story brick and stone trim garage, 82x100; concrete floor, metal store front, plate glass; $40,000.

Excelsior Springs, Mo.; McDavid Brothers; one-story garage, 57x114.

Joplin, Mo.; Joplin Supply Co.; five-story brick and stone trim auto sales room, 75x120.

Kansas City, Mo.; Durham & McMasters, 3005 Gillham road; two-story brick and stone trim service station, 60x120.

Kansas City, Mo.; William F. Beck, 2604 Victor street; one-story brick garage, 49x122; trussed steel roof, cement floor, heating plant; $10,000.

Kansas City, Mo.; Southern Oil Co., Security building; one-story frame and stucco filling station, composition roof, 35x40.

Kansas City, Mo.; Tri-State Motor Co.; two-story gargae, 71x103; $50,000.

Moberly, Mo.; J. N. Taylor, 211 North Fourth street; one-story public garage, 10x140; $75,000.

Aurora, Neb.; Sandin Auto Co.; one-story brick garage, 120x211; $60,000.

Columbus, Neb.; Gottberg Auto Co.; two-story brick and terra cotta trim garage, 90x132; $80,000.

Fallon, Neb.; George Conerston; one-story concrete garage, 50x85; $10,000.

Manchester, N. H.; William B. O'Neil, 272 Walnut street; one-story public garage, 85x100, at Union and Brooklyn streets; $15,000.

Atlantic City, N. J.; Bertram Ireland, Guarantee Trust building; two-story brick public garage, 50x175; $40,000.

Bayside, N. J.; George F. Rohl, 250 East 60th street, New York; one-story brick garage, 49x100, east side of Broadway, north Higgins avenue; $12,000.

Bordentown, N. J.; Raymond Robbins; one-story brick public garage, 60x70; $10,000.

Montclair, N. J.; William L. Greenbaum; one-story brick public garage, 60x100, at 371-373 Bloomfield avenue; $10,000.

Newark, N. J.; I. Gorb, 312 North Broad street; 30 one-story brick community garages, 10x18 each; $10,000.

The Sales Rooms and Service Station of the New England Branch of the White Co., 930 Commonwealth Avenue, Boston, One of the Largest and Most Complete of a Splendidly Developed System.

Hathaway Manager of White Co.

J. S. Hathaway is the well known manager of the New England branch of the White Motor Co., maker of White trucks, Cleveland, O., with headquarters at 930 Commonwealth avenue, Boston. The White Co. is one of the few larger automotive concerns that is confining its activities in this field to the production of commercial wagons. The name "White" has long had a prestige in connection with the production of high-grade sewing machines, bicycles, etc., which has continued into this later sphere of motor car manufacture. The White Co. was one of the pioneers of the industry and first began the production of passenger cars, which after a few years was enlarged to include commercial motor vehicles as well. The output of this department was increased year after year until the United States engaged in war with Germany, when the great plant at Cleveland was concentrated on trucks, for this country and its allies, and at the cessation of hostilities the demand for White trucks was such that the manufacture of passenger cars had not been resumed.

White trucks are produced in five sizes, from ¾ to five tons. The number in use, as ascertained from the company's roll call sent out in April, 1919, included 2774 fleets in active service, totaling 33,319 trucks, this being in addition to all the users of single trucks.

A novelty is shown this year in the line of fire fighting machinery. It is the "Triple B Combination," a pumping engine, chemical engine and hose car, all in one. It is the latest thing in motor fire apparatus, combining in one piece all of the various types.

Keep the tractor in as dry a place as possible in winter months. Coating the metal surfaces with oil is a splendid protection against rust.

McCORD GASKET POSTER.

The McCord Manufacturing Co., Detroit, Mich., has just issued an effective piece of publicity which is rather unique. It consists of an attractive poster showing the various types of copper-asbestos cylinder head gaskets used on all American passenger cars, motor trucks and tractors, reproduced in the natural copper color. A total of 89 different gaskets are shown, used on 140 passenger cars of different models, 47 motor trucks, 31 tractors and three miscellaneous motors. An alphabetical list of cars, trucks and tractors is included, giving the numbers of McCord gaskets, which are built to the specifications on the manufacturers' blue prints for these particular motors.

The McCord company will be pleased to forward these posters to any service station or dealer.

The eighth annual convention of the United States Good Roads Association will take place at Hot Springs, Ark., April 13-17.

Holland System Sells Clydesdale

One of the newest automobile concerns to enter business in Boston is the Holland System, Inc., Trading Corporation, with main offices at 45 Milk street and sales rooms on Commonwealth avenue. It is distributor for Maine, New Hampshire, Vermont and Eastern Massachusetts of Clydesdale trucks, made by the Clydesdale Motor Truck Co., Clyde, O.; represents in Eastern Massachusetts the Atlas over-size ¾ ton truck built by the Martin-Parry Corporation, York, Pa., and has the New England agency for Perfection pneumatic tires manufactured by the Perfection Tire & Rubber Co., Fort Madison, Ia., and Overman cushion tires, made by the Overman Cushion Tire Co., Inc., New York City.

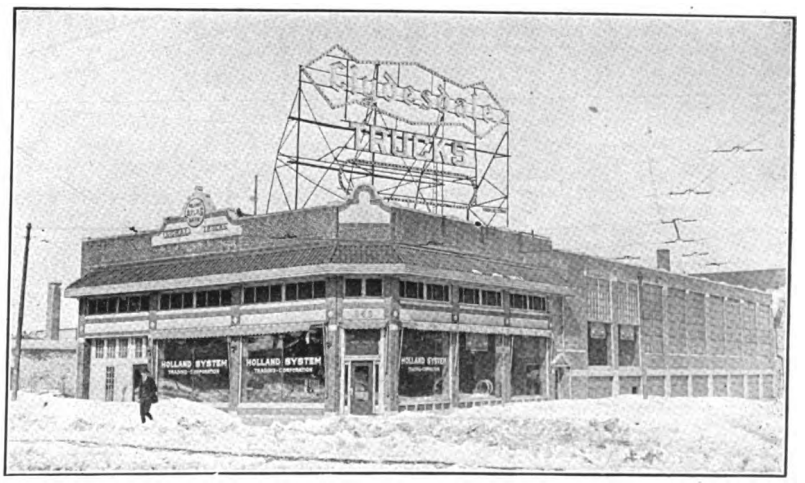
The Holland System has installed complete service stations for its trucks, and each department of the diversified business is under the direction of expert executives and a well organized and thoroughly trained sales force has been put into the field.

Daniel E. Holland is president and John F. Holland treasurer of the corporation, and their business aggressiveness and at the same time, strict adherence to high principles, are well recognized from their connection with other successful business enterprises.

This concern is also distributor for the Porter car, which was exhibited in Boston the week following the show at the Copley-Plaza hotel by Raymond Holland. The chassis is the one that attracted so much attention at the private salon show in New York. Mr. Holland also has a four-passenger model complete.

When the superior quality of the Porter was demonstrated, President D. E. Holland decided it would just suit the ultra taste of particular New Englanders who would care more about the quality of the car than the price.

The features of the Porter are the achievement of all the ideals striven for



The Salesroom and Service Station of the Holland System, Distributor for Clydesdale and Atlas Trucks, at Braves' Field, Commonwealth Avenue, Boston.

Calender of Coming Events

March 13-20—Asbury Park, N. J., Car Show, Asbury Park Casino.

March 13-20—Boston, Mass.; Boston automobile and truck show, Mechanics' building; Chester I. Campbell, manager.

March 13-20—Atlantic City, N. J., Annual Automobile Show, Million Dollar Pier.

March 15—Little Rock, Ark., Annual Automobile Show, Liberty Hall.

March 15—Oklahoma City, Okla., Automobile Show, Oklahoma City Dealers' Association.

March 15-20—Wilkes-Barre, Pa., 10th Annual Showing of Passenger Cars, Automobile Dealers' Association of Wilkes-Barre, Inc.

March 15-20—Great Falls, Mont., Fifth Annual Automobile Show and Motor Style Show, Montana Distributors' Association.

March 15-20—Huntington, W. Va., Annual Automobile Show, Huntington Automobile Club and Dealers, Vanity Fair building.

March 15-21—Seattle, Wash., Show, Passenger Cars, Trucks and Accessories. William J. Cole, manager, 1321 Seneca street, Seattle, Wash.

March 17-18—Lake Charles, La., Semi-Annual Convention, Louisiana-Mississippi Automotive Trade Association.

March 19-20—Chicago, Ill., Convention, National Association Motor Truck Sales Managers, Congress Hotel.

March 20-27—Trenton, N. J., Annual Automobile Show, Trenton Automobile Dealers' Association, Armory. John L. Brock, manager.

March 20-27—Pittsburgh, Pa., Show for Passenger Cars and Equipment, Automotive Association, Inc., Motor Square Garden. John J. Bell, manager.

March 22-27—Torrington, Conn., Annual Automobile Show. James J. Callahan, manager.

March 22-27—Wilkes-Barre, Pa., Commercial Car Show, Armory, Automobile Dealers' Association of Wilkes-Barre, Inc.

March 22-27—Trenton, N. J., Car and Truck Show, Armory, Trenton Auto Trade Association.

March 22-27—Duluth, Minn., Annual Automobile Show, Duluth Auto Trades Association. W. F. Daly, director.

March 22-27—Utica, N. Y., Annual Automobile Show, Utica Motor Dealers' Association.

March 22-27—Oklahoma City, Okla., Annual Automobile Show, Oklahoma City Motor Car Dealers' Association. G. W. Woods, manager.

March 22-27—Columbia, S. C., Automobile Show.

March 22-27—Philadelphia, Pa., Aeronautic Show, First Regiment Armory, Board and Callowhill streets, auspices of Chamber of Commerce, Franklin Institute and Aero Club of Pennsylvania.

March 23—Buffalo, N. Y., meeting Buffalo Section, Society Automotive Engineers.

March 25-27—Dallas, Tex., Fourth Annual Convention, Texas Automobile Dealers' Association.

March 25-27—Newton, Kan., Automobile and Truck Show, Harvey County Automobile and Truck Dealers' Association.

March 25-27—Fort Worth, Tex., Fourth Annual Convention, Texas Automobile Dealers' Association.

March 27-April 3—Harrisburg, Pa., Annual Automobile Show, Harrisburg Motor Dealers' Association.

March 31-April 3—Goldsboro, N. C., Car and Truck Show, Goldsboro Automotive Trade Association.

March 31-April 3—Holdrege, Neb., Annual Car Show, Holdrege Automobile Dealers' Association, Auditorium. Charles Engstrom, Ralph Kiplinger, managers.

March 31-April 3—Lancaster, Pa., Annual Automobile Show, Lancaster Auto Dealers' Association, Eastern Market House.

March and April, 1920—Pretoria, South Africa; South African products exposition; overseas motor vehicles especially featured.

April—Topeka, Kan., Show, Passenger Cars, Trucks, Tractors and Accessories. L. W. Warner, secretary, 121 North Kansas avenue.

April—Halifax, N. S., Annual Meeting, Nova Scotia Motor League.

April 1-15—Milan, Italy, International Fair.

April 2-12—Barcelona, Spain, Exhibition, International Business Organization.

April 3-May 4—Buenos Aires, Argentine Republic; exposition of United States manufacturers.

April 4-21—Brussels, Belgium, Commercial Fair.

April 5-10—Gloversville, N. Y., First Annual Automobile Show, Gloversville State Armory. James J. Callahan, manager.

April 6-10—Albany, Ala., Automobile Show.

April 6-10—Wilmington, S. C., Annual Show of Passenger Cars and Commercial Vehicles, Chamber of Commerce. W. D. MacMillan, Jr., chairman.

April 7—Minneapolis, Minn., Meeting, Minneapolis Section, Society Automotive Engineers. Tractor Weights and Draw Bar Pulls.

April 12-17—Rittersville, Pa., Third Annual Car and Accessory Show, Lehigh Automobile Trade Association.

April 12-17—Hot Springs, Ark., Eighth Annual Convention, United States Good Roads Association; Fourth Annual Convention, Bankhead National Highway Association.

April 14-17—Waynesburg, Pa., Annual Automobile Show, Automobile Dealers' Association of Greene County, Armory. F. L. Hoover, Manager.

April 15-29—Basle, Switzerland, Fourth Annual Sample Fair.

April 19-24—Rittersville, Pa., Truck, Tractor and Trailer Show, Lehigh Automobile Trade Association.

April 21-28—San Francisco, Cal., First National Aeronautic Exposition, Exposition Auditorium.

April 29-May 1—Detroit, Mich., Fourth Annual Meeting and Convention, American Gear Manufacturers' Association.

April-May—London, England; commercial vehicle exhibition, Olympia.

May 6-8—Macon, Ga., Annual Automobile Show, Macon Automobile Dealers' Association.

May 9-12—Chicago, Ill., Independent American Petroleum Congress, Congress Hotel.

May 15-20—San Francisco, Cal.; Seventh Annual Foreign Trade Convention.

May 31—Indianapolis, Ind., Seventh International 500-Mile Race, Indianapolis Motor Speedway.

June—Omaha, Neb., Reliability Truck Tour.

June 6-10—Indianapolis, Ind., World Convention of Advertising. Felix M. McWhirter, chairman.

July—Lake Huron Tour.

July—London, England, International Aircraft Exhibition, Society of British Aircraft Construction, Olympia.

July 5—Tacoma, Wash., Tacoma Speedway events.

August—Paris, France, Grand Prix Race, Sporting Commission, Automobile Club of France.

September—New York-San Francisco Glidden Tour.

Sept. 3-12—Detroit, Mich., 71st Annual Exposition, Michigan State Fair Association.

October—Buenos Aires, Argentina, National Exposition of American Manufactures.

Oct. 6-8—Northampton, Mass., Annual Automobile Show, H. F. & H. Agricultural Society, Three County Fair Grounds. A. J. Morse, secretary.

Oct. 6-16—New York, N. Y., Electrical Show, Grand Central Palace. George F. Parker, manager.

HANDLEY-KNIGHT CO. LETS CONTRACT FOR PLANT.

One of the recent important transactions in the automotive industry was the signing of contracts between Henry L. Van der Horst of Kalamazoo and the Handley-Knight Co. for the erection of the big Handley-Knight factory on the 40-acre tract recently purchased on the north side, Kalamazoo, Mich., touching the lines of three of the leading railroads, namely, the Lake Shore, the G. R. & I. and the Grand Trunk.

The plans for the main building call for a fireproof structure, 80 feet wide by 800 feet long. The steel was purchased direct by the company some time ago and shipment from the mill was to be made by March 16. The plant is to be completed and ready for operation by June 1. The company will lay its own tracks into the plant.

J. I. Handley, President, Handley-Knight Company.

Mr. J. I. Handley, president, reports that rapid progress is also being made in the matter of purchasing materials, and everything points to the shipment of finished cars in July.

PEERLESS CO. TO MAKE PASSENGER CARS ONLY.

The Peerless Motor Car Co., Cleveland, O., is now devoting its entire factory facilities to the production of the Peerless two power range eight-cylinder passenger cars, confining its line to one chassis with which will be supplied bodies in the five approved open and enclosed types. The machinery and space formerly used for truck building are now taken up for the passenger car work.

The addition of four new buildings and the elimination of truck production has more than doubled the passenger car capacity of the Peerless plant, which will be adhered to through 1920.

2419 TRACTORS IN PENNSYLVANIA.

A recent report of the Pennsylvania State Agricultural Department shows that 2419 farm tractors are in operation on the farms in that state.

Boston Sales Rooms of the Paige-Detroit Co. of New England, Distributor for Detroit and Paige Cars in Six States.

Paige-Detroit's Boston Quarters

The automobile products of the Paige-Detroit Motor Car Co., Detroit, Mich., is handled in the six New England states by the Paige-Detroit Co. of New England, whose headquarters in Boston are shown in the accompanying illustration. The reputation of Paige passenger and commercial cars bears out the slogan the company has adopted, "the most serviceable car in America." The officials of the New England branch state that a study of the details of any model produced by this company from any standpoint will leave an impression of endurance, efficiency, economy and performance which are the points every prospective purchaser of a motor car is looking for today.

The truck department is in charge of J. F. Hernberg and for the New England fields the model 52-19, a 1½-ton machine, is being specialized. This has a four-cylinder Continental engine, Brown-Lipe transmission and dry plate clutch, with a Stromberg carburetor and Bosch magneto. Its speed on pneumatic tires is governed at 25 miles an hour; on solids at 15 miles an hour. The cab is one of its features for comfort, it being closed in stormy weather so as to be proof against storms and cold.

COTTA ORGANIZES ADVERTISING DEPARTMENT.

The Cotta Transmission Co., Rockford, Ill., has organized and completely equipped an advertising department with F. W. Ramey, formerly of the sales department, at its head.

This development is in line with the recently announced expansion of the Cotta organization, which at the present time has more than three times the number of commercial trucks accounts, than they were supplying when the war ended.

BUDA CO. CREATES NEW OFFICE.

Realizing and appreciating the necessity and importance of efficient and prompt service for the disbursement of spare parts, the Buda Co., Harvey, Ill., recently appointed R. A. Kiken to the new office of service manager of the engine division.

Mr. Kiken's experience in this field dates back to February, 1910, when he first entered the employ of the Buda Co., since which time he has served in practically every branch of the factory, including the stores, cost, production, efficiency and sales departments He served two years overseas with U. S. army.

."Tractor Weights and Drawbar Pull" will be the subject for the meeting of the Minneapolis Section, S. A. E., at its meeting April 7.

Judd Specializes Commerce Trucks

John L. Judd, 685 Beacon street, is the distributor for New England for Allen automobiles, made by the Allen Motor Co., Columbus, O.; the Commerce truck, manufactured by the Commerce Motor Car Co., Detroit, Mich.; the Dearborn-Smith Form-a-Truck and a line of tires and other accessories, all of which are of recognized standard in the automotive field.

Mr. Judd is at present specializing to a considerable extent on the Commerce truck as best meeting the needs of the majority of truck users in his section. Pointing to the various units which go into its make-up, he says: "The perfect co-ordination of these units to produce maximum power at the lowest operating cost consistent with our standard of service is what makes the Commerce a good truck—better than others of the same tonnage capacity. The relation of the component units to each other is so well balanced that all strains are equally distributed throughout the working parts."

The number of types in bodies on the Commerce chassis has no limit, and one feature is the "Every Way Body," adapted to almost every form of usefulness. For the farmer there are bodies which are specially designed, even to the extent of carrying cows, horses or pigs.

For buyers who want a little more speed and ease of riding, the trucks are equipped with pneumatic cord tires; otherwise the solid type of equipment is used.

Other features are the Continental Red Seal motor, the Torbensen internal drive rear axle and a specially designed radiator which was the first of its kind in the field. The Commerce claims to be the only truck that comes to the user completely equipped with impulse starter, electric lights, a windshield and a bumper.

The Sales Rooms of John L. Judd, New England Distributor of Allen Cars and Commerce Trucks, at 683 Beacon Street, Boston.

The Partly Constructed Service Station Now Being Erected in Commonwealth Avenue, Boston, for the Noyes-Buick Co., New England Distributor for GMC Trucks.

Weston Electrical Fault Finder

The Weston Electrical Instrument Co., Newark, N. J., is presenting to the garage and repair shop trade its Weston Model 441 Fault Finder. This consists of a voltmeter and ammeter, two independent instruments, mounted in a compact case with a carrying handle and hinged cover. In this all binding posts have been eliminated, connection between the apparatus being tested and the instrument being made by means of flexible rubber covered cables having plugs on one end which fit into receptacles in the instrument and spring clips on the other end. The voltmeter has ranges of .2-0-3 and 2-0-3 volts. With these ranges tests can be made to determine the voltage of the storage battery as a unit or of the individual cells; the cadmium test can be performed; open, shorts and grounds can be located; the generator voltage, as well as the voltage at any light or the horn, etc., can be measured; ignition condensers can be tested for opens and grounds and many other tests for troubles can be made.

The ammeter has a range of 30-0-30 amperes, which permits the rate of charge or discharge to be determined. It is also used in adjusting the relay, for locating shorts in the branch circuits, etc. The ammeter is protected against burn-out by an automobile type glass enclosed fuse which is accessible for replacement.

A very comprehensive and complete instruction book accompanies each instrument.

The Vulcan Implement Co., Evansville, Ind., has established a northwestern branch at Minneapolis, Minn., in charge of Harry Simpkins.

SERVICE PLANT OF GMC NEW ENGLAND DISTRIBUTOR.

The Noyes-Buick Co., 17 Lawton street, Boston, New England distributor for GMC trucks, manufactured by the General Motors Co., Pontiac, Mich., is erecting a new service station on Commonwealth avenue, Boston, which will be one of the largest buildings in that city devoted to the automobile business. The manager of the Noyes-Buick Co. is Harry E. Noyes and he is very enthusiastic over the present business prospect in New England in his line.

One of the new truck models shown by the Noyes-Buick Co. at the Boston show was the ¾ to one-ton GMC. It is called the "Standard All-Purpose" truck and is said to bear out its name to the letter.

SOWERS TAKES ENTIRE BUILDING.

Treasurer A. H. Sowers of the Lexington Automobile Co. has taken over the entire building on Washington street, Brighton, Mass., for a service station. Charles M. Bushart, an M. I. T. graduate, is in charge and he will be assisted by E. H. Jennings.

Stoughton Co. to Build Trucks

The Stoughton Wagon Co., Stoughton, Wis., which has been manufacturing freight carrying and farm wagons and farm implements since 1863, has just entered the power wagon industry and will manufacture worm drive trucks in three sizes under the trade name of "Stoughton." They will all be built to a standard design, the only variation being in the dimensions of the components, the engineering having been thoroughly studied and carefully developed.

The trucks are being produced in two buildings erected especially for this work and the progressive method of assembly has been adopted. The construction units include Waukesha engines, equipped with Eisemann magnetos and Stromberg carburetors; Waukesha governors, Brown-Lipe multiple disc clutches, Brown-Lipe selective sliding gear transmission gearsets, Smith frames, Sheldon springs, Sheldon axles, Goodyear tires, Thermoid flexible joints, specially designed radius rods and brake equalizers and Brown wick oilers. The equipment is very complete.

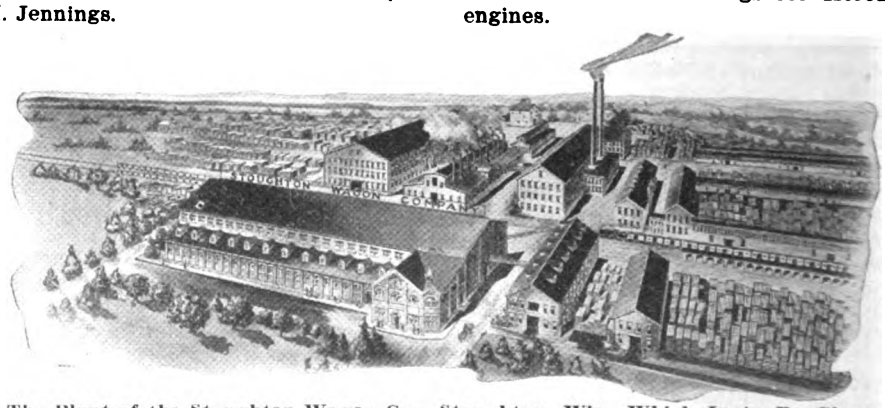
The officials of the company are: President, F. J. Vea; vice president, Henry Beattie; treasurer, M. M. J. Vea; secretary, W. C. Regelmeyer. The company is now developing a sales organization throughout the country.

The Stoughton trucks are specified as model B, 1½ tons; model D, two tons, and model E, three tons, which are listed at $2200, $2600 and $3000 in the order given.

EXPANSION PROGRAMME OF HERCULES MOTOR CO.

The Hercules Motor Manufacturing Co., Canton, O., has increased its capital from $800,000 to $1,500,000, all common stock, to permit the carrying out of plans for greatly increased production. The following officers were elected: President, J. C. Obermier; vice president, Gordon M. Mather; secretary, treasurer and general manager, Charles Belough; H. H. Timken, chairman board of directors; other directors, Rathburn Fuller, R. W. Gallagher, Austin Lynch.

A separate company, known as the Motor Castings Co., has recently been formed to furnish castings for Hercules engines.



The Plant of the Stoughton Wagon Co., Stoughton, Wis., Which Is to Be Given Over to the Production of a Series of Three Worm Drive Trucks.

Equipping Ford Front Hubs with Timken Bearings

FORD closed models and one-ton trucks have for some time past been fitted with special Timken roller bearings, and the same bearings can also be installed in other models to replace the old cup and cone bearings, the two types of bearings being interchangeable in sets. The Ford Co. supplies the bearings in separate packages or cartons, a complete set of bearings for one wheel in each package. As the Ford spindles have right and left hand threads, it is, of course, necessary to supply adjusting cones for the outside bearings with corresponding threads. The packages containing the complete sets of bearings are plainly marked "right wheel" or "left wheel," according to the type of bearings they contain.

When installing Timken bearings in Ford front wheels in place of the old bearings, the first step is, of course, to remove all parts of the old bearings from the wheel hub, and clean out the hub thoroughly so that no grit or metal chips will be left to damage the new bearings. The shoulders of the recesses from which the ball cups were removed should be inspected carefully for high spots, which might cause the cups of the Timken bearings to set high on one side.

The stationary cone is also removed from the inner end of the spindle, as it is replaced by a special cone. Be careful to leave no rough or high spots on the part of the spindle on which the cone seats, as the Timken inner cone is not pressed on to the spindle, but is a floating slip fit. It has a clearance on the spindle of one-thousandth of an inch.

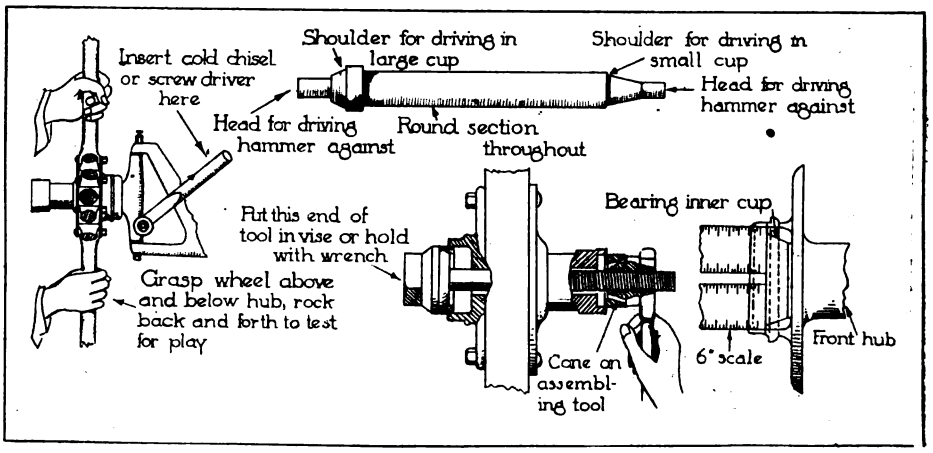
Both inner and outer cups of the Timken bearings, corresponding to the inner and outer ball races or cups of the old bearings, are press fits in the hub. The best way of installing them is to draw them both into place at once with a special puller, similar to that shown in the drawing. The large or square end of this device is held in a vise or with a wrench, while the special handle nut on the other end is turned. Tools of this type can be purchased from the Ford Motor Co. The stock number is 3-Z-2316.

If no special puller is available the cups can be driven into the hubs, but care must be exercised to drive them evenly all the way around their circumference. A special driver or arbor, such as shown in cut would be very useful for this purpose. One end of this driver is used on the large or inner cup and the other end on the small or outer one.

The inside cone faces of the cups must not be struck or marred in any way when pressing the cups into the hub.

As with the cup and cone bearings, the cups must be a press fit in the hub. It is advisable to try both cups by hand, to make sure they will not fit too loosely, before attempting to press either one into place. Sometimes a hub will be damaged and the recess for one of the cups expanded somewhat as a result of some of the balls breaking in the old bearing. If either cup of the Timken bearings is a loose fit in the hub it would be safest to install a new hub, as there is no safe method of making a bearing cup a tight fit in a hub which is too large for it. Some repairmen attempt to make a cup a tight fit by putting strips of paper or emery cloth between the cup and the hub recess. With either material there is grave danger of getting the cup out of true. If paper is used it soon becomes soaked with grease and pounds or works out of place, leaving the cup loose. Emery cloth, on the other hand, cannot be used at all unless the cup is entirely too loose and sloppy a fit in the hub recess. To put it another way, if the hub is so large that it is possible to use emery paper to make the cup a tight fit, it is not safe to use the hub.

The depth of the outer race recess in the latest front hubs is ¾ inch, but in older hubs it is 19/32 inch. Some variation may occur, therefore, in the depth to which the outer or small cups of the Timken bearing sets can be pressed in different hubs. The principal thing to look out for in connection with the outer cups is to see that they are pressed into place evenly, and are not high at any one spot. It is unimportant if some cups project slightly beyond the end of the hub, are flush with it or set in slightly, provided they have been pressed in all the way and run true.



Appliance Used in Installing Ford Front Hubs with Timken Roller Bearings and Methods of Application.

To test the fit of the inner or large cup, measure the distance from the outer face of the cup to the edge of the hub at several different points around the cup, as shown in cut. A fine scale should be used, preferably one divided by 64ths, as a very slight difference in the depth of the cup at any one point would cause it to run considerably out of true.

A plentiful supply of good cup grease should be packed into the hub, and both inner and outer cones and roller sets should also be packed with grease, the spaces around and between the individual rollers being filled. The large inner cone, with its rollers, is then placed in the inner cup, and the dust ring with the felt washer driven into the large end of the hub so that the dust cap is flush with the end of the hub.

It will be noted that the rollers of the Timken bearings are assembled with the cones, instead of with the cups or races, as the balls of the cup and cone bearings are. For this reason the large inner cone must be a floating slip fit on the inner end of the spindle body, as previously explained.

The wheel with the inner bearing complete and the dust ring in place is next mounted on the spindle. It is never necessary to force the large cone on to the spindle. The outer or threaded cone for that side, with its rollers assembled, properly packed with grease, is then screwed on to the outer end of the spindle. A right hand threaded cone is used on the left spindle, and a left hand thread on the right side, as with the old cup and cone bearings.

The adjusting cone should be run up on the spindle until the wheel seems to bind slightly. The wheel should then be turned a few times to make sure that all working parts are in good contact, then the adjusting cone should be backed off about ¼ to ½ turn. This will be sufficient to allow the wheel to revolve freely but without end play.

Sometimes looseness in the spindle body bushings may be mistaken for end play in the wheel bearings. To avoid any such mistake, insert a cold chisel or a screw driver between the jaw of the axle and the spindle to take up any play that may exist in the spindle bushings, then test the wheel for end play by working the wheel back and forth.

When the proper adjustment has been reached the spindle washer and nut should be replaced, the nut being drawn up tight and cotter keyed the same as with the cup and cone bearings. Make sure that tightening the nut to the proper notch for the cotter key does not cause the bearings to bind. Turning the wheel a few times just before the cotter key is inserted will determine this. The hub cap can then be filled with grease and replaced.

Every three or four months the hub bearings should be cleaned out, repacked with fresh grease and readjusted. The old grease should be washed out thoroughly with kerosene or gasoline to make sure no grit or metal particles remain in the hub to damage the bearings later. The rollers, cones and cups should be examined carefully for pitting or other signs of wear.

Brief Facts and Features of the Automobile Industry in 1919

By Alfred Reeves, General Manager, National Automobile Chamber of Commerce.

Motor Car Manufacturers.

Motor truck manufacturers in production	170
Passenger vehicle manufacturers in production	90
States in which factories are located	32
Employees in automobile factories	580,000
Passenger cars produced in 1919	1,586,787
Motor trucks produced in 1919	305,142
Total motor vehicles produced in 1919	1,891,929
Wholesale value of passenger cars produced in 1919	$1,399,282,995
Wholesale value of motor trucks produced in 1919	$408,311,585
Wholesale value of all vehicles produced in 1919	$1,807,594,580
Average wholesale price of passenger cars produced in 1919	$882
Average wholesale price of motor trucks produced in 1919	$1,338
Automobile tires manufactured in 1919	30,000,000

Dealers, Garages, Etc.

Total dealers, garages, repair shops, etc., in United States	62,036
Passenger car dealers	32,317
Motor truck dealers	18,943
Garages	36,247
Automobile repair shops	43,281

Automobile Exports.

Value of motor vehicles and parts exported in 1919	$146,334,516
Number of passenger automobiles exported in 1919	62,624
Value of passenger cars exported in 1919	$68,945,740
Countries to which automobiles were exported	81
Number of commercial cars exported in 1919	14,748
Value of commercial cars exported in 1919	$35,372,419

Motor Vehicles in Use.

Motor vehicles registered in United States, approximately	7,100,000
Motor vehicles in New York state	570,000
Motor trucks in use in United States	700,000
Tons of goods hauled yearly by trucks (estimated)	2,200,000,000
Cost of haulage by motor trucks at 18 cents per ton mile	$1,980,000,000
Cost of haulage on basis of 24 cents per ton mile by horse and wagon	$2,640,000,000
Value of passenger service at railroad rate of 3 cents per mile	$2,525,000,000
Number of persons in United States to one motor car	15.96
Automobiles in United States for each square mile	2.1
Horses displaced by motor trucks in use (estimated)	3,600,000
Acreage released by trucks for production of human foods	15,000,000
Greatest percentage of increase in car registrations, Tennessee	29
Greatest number of cars per capita, Iowa and Nebraska	1 for every 6½ persons
Revenue to states from license fees	$65,000,000

Farmers are largest users of trucks, owning 10 per cent. more than manufacturers and 15 per cent. more than retailers.

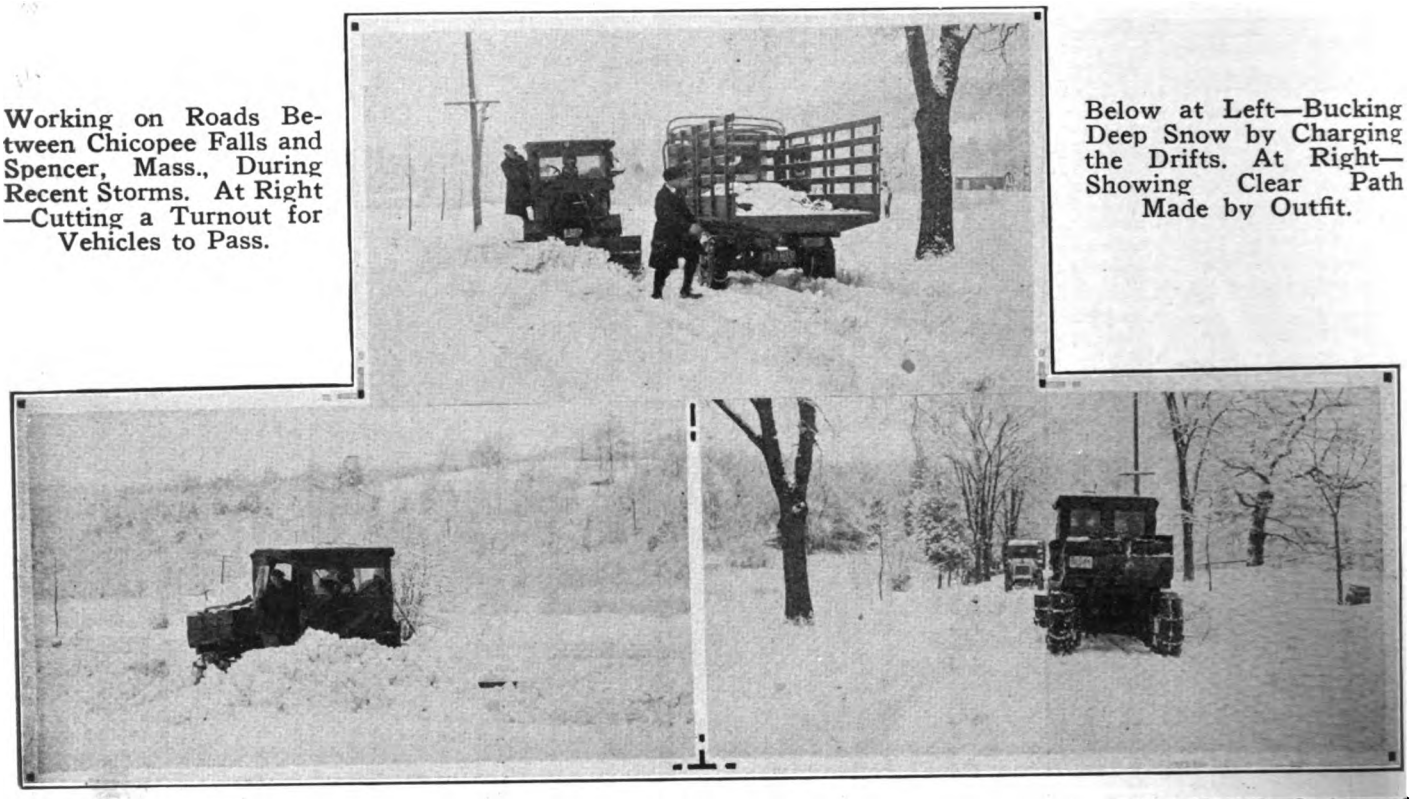
Fisk Rubber Company's Tractor Cleared Highways

Working on Roads Between Chicopee Falls and Spencer, Mass., During Recent Storms. At Right —Cutting a Turnout for Vehicles to Pass.

Below at Left—Bucking Deep Snow by Charging the Drifts. At Right—Showing Clear Path Made by Outfit.



MURPHY WINS LOS ANGELES SPEEDWAY EVENT.

The dedication of the new Los Angeles motor speedway, Feb. 27, was signalized by the winning of the 250-mile classic by Jimmy Murphy, a new participant in speed contests, driving a Duesenburg racing car. The time made was 2:26:0.59, an average speed of 103.2 miles an hour. The other leading contestants in the order in which they finished were as follows:

Second, Joe Thomas, Frontenac; third, Ira Vail, Philgrin; fourth, Roscoe Sarles, relief driver for Goodson, Frontenac; fifth, Eddie O'Donnell, Hudson; sixth, Eddie Hearne, Chevrolet; seventh, Ralph Mulford, Meteor; eighth, Ralph De Palma, Boillot; ninth, John De Palma, Mercedes.

Murphy, the winner made the nonstop run on Goodyear cord tires, while Vail, O'Donnell, Hearne and the De Palmas all used Goodyears.

The race was full of thrills from the start. Milton, Pullen, Klein, Durant, Boyer and Searles set a terrific pace, each leading the field at different times. The mad pace soon caused the retirement of Milton because of valve trouble, Pullen, Boyer and Searles went out from broken connecting rods, a broken wheel sent Klein to the pits, while Durant was forced out by a broken piston.

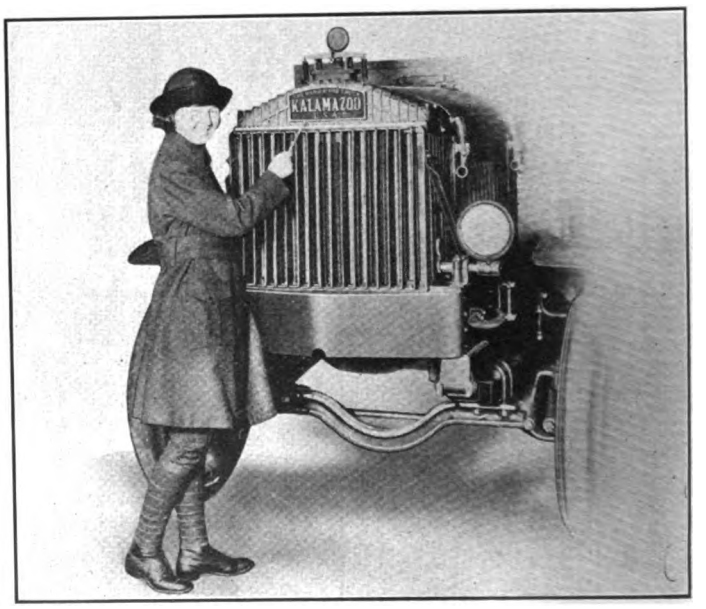
Hearne, Klein and Durant shared honors with Murphy in having no tire trouble until forced out of the contest by mechanical break downs. Pullen, Vail and O'Donnell made one tire change each.

The Los Angeles race proved a success from every standpoint and opened the 1920 racing season auspiciously.

"MISS KALAMAZOO" DEMONSTRATES AT CHICAGO SHOW.

During the truck show at Chicago visitors at the Kalamazoo exhibit were surprised to meet with an interesting young woman who, garbed in the conventional costume of a male driver, was a particularly active member of the sales organization of the Kalamazoo Motors Corporation. She was known as "Miss Kalamazoo" and besides being a clever driver she is said to be extremely well informed mechanically and technically. Those who first met her were not inclined to take her selling advances seriously, but they frequently learned that her knowledge was decidedly superior, and she was qualified to sell either trucks or transportation.

General Sales Manager H. G. Stiles of the company was decidedly impressed by the prospects developed by the show, which he believed to be extremely satisfactory, and much interest was evidenced in the Kalamazoo machines, which are built in 1½, 2½ and 3½-ton sizes. These are constructed of high grade units, with unusual factors of safety. The trucks are sold completely equipped, with electric lamps, starter and horn, all-steel enclosed cab, motometer, hub odometer, radiator guard and towing hooks in addition to the standard equipment.



"Miss Kalamazoo," a Girl Whose Mechanical and Technical Knowledge Surprised Visitors at the Kalamazoo Truck Exhibit at the Chicago Show.

The Sparks-Withington Co., Jackson, Mich., maker of Sparton automotive products, is still continuing its policy of expansion. A second-story added to plant No. 2 gives a floor space 320 by 50 feet, and a four-story building, 100 by 30 feet, is being erected for storage purposes.

Fisk Cord
Fisk Red-Top
Fisk Non-Skid

THE tire that makes the sure-fire hit with the dealer is, of course, the tire that is firmly established in popular favor. So great is the demand for Fisk Cords that any dealer who orders a supply for the first time will be more than satisfied by the rapidity with which that supply is sold. Fisk Cords sell strictly on their superlative workmanship; and the re-orders come in because Fisk Cords embody the Fisk Ideal—

"To be the best concern in the world to work for; and the squarest concern in existence to do business with."

Next Time—BUY FISK

There is a Fisk Branch within quick reach of any dealer.

"Just one idea alone, that I got from your book brought me a $50 job and a new customer. And I really couldn't run my shop without AMBU wiring diagrams."

The above letter from the repair shop owner is evidence of the actual money value of the AMBU books. A man drove up to his shop and said his starter wouldn't work and that three shops had failed to fix it. One look at it and a recollection of a point in the "Ford Standard Electrical Equipment" enabled this repair man to immediately diagnose the trouble. That gave him the job and a new customer.

THE AUTOMOBILE STORAGE BATTERY

Its Care and Repair.

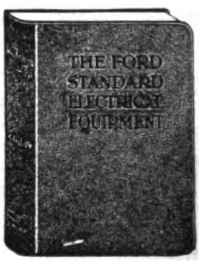
The big second edition of this valuable book is now ready. Over 400 pages of vital technical information for the repair and battery shop man. Full of illustrations and diagrams. Tells how to equip a shop and to handle every possible kind of battery—no matter what the trouble is. Even the new 1920 batteries are described.

And in addition is a big chapter on "Farm Lighting Equipment" that is worth many times the cost of the whole book.

Know storage batteries—learn all about them from this simply written book.
Five days' examination..... **$5.00**

FORD STANDARD ELECTRICAL EQUIPMENT

This book not only describes every detail of the new F. A. Starting and Lighting System on Fords—with illustrations and diagrams that make it so clear that anyone can understand, but it describes every form of trouble in the ignition system as well. With the knowledge that this book gives, you can solve any problem that may come to you. 150 pages—47 illustrations—Send on 5 days' examination..... **$2.50**



Direct or from your Jobber.

AMBU WIRING DIAGRAMS

All the diagrams of cars 1912 to date. Assembled in 3 loose leaf volumes. Vol. 1—1912-13-14. Vol. 2—1915-16. Vol. 2—1917-18-19. Each volume, $3.50.
All 3 $10.00. Single sheet diagrams, each..... **$.25**

(Continued from Page 30.)

been displayed for a considerable period.

The chassis as a rule attract attention because of the general excellence of workmanship and finish, and the complete cars are generally distinctive with reference to body designs and finish. Without exception unusual care has been directed to equipment, much attention being paid to detail of appointment and luxuriance of upholstery, and every practical provision has been paid to the comfort and convenience of the passengers.

While the stock bodies of the cars are better designed better built and better finished, and they evidence an extremely gratifying progress in coach work generally, there has been even greater development in the special bodies, that are intended to appeal to those who keenly discriminat and are willing to pay the price for whatever will please or satisfy. Never before has much care been directed to thoroughly equipping cars, and the importance of meeting every practically possible requirement has been realized by manufacturers and body specialists.

The mechanical work of the chassis has been given equal care and not only is the workmanship better and the finish superior as compared with previous productions, but the assembling details have been refined with the object of obtaining more satisfactory construction.

The increasing number of truck exhibits portends the growth of this branch of the automotive industry, and the development of the machines mechanically has been given close attention. The truck division is limited in numbers by the comparatively small spaces obtainable, for the management desired to have as large a number of exhibitors as possible, and many exhibits consist of a standard type chassis, or a complete truck, very few showing a full series of machines of varying load capacities.

In all approximately 200 chassis and trucks were shown, of which 48 were in the main building and 21 in the Armory, and the greater part of the new machines are seen in the latter division. Of the 69 makes, five are electric, three of which, the C-T, the Oneida and the R & L are shown for the first time in Boston. The Oneida truck is new in the sense that it is the only make constructed with the Oneida patent line drive, which is built under the Krohn patents. The machine is driven by a single motor that is enclosed with the transmission unit in the rear axle housing.

Other new trucks are the Northway, built by the Northway Motors Corporation, Natick, Mass., which is two sizes, two and 3½ tons load capcaities, known as B-2 and B-3½; the Capitol Motors Corporation, Fall River, Mass, is another new make, and this concern shows one and 2½-ton machines. A third New England made truck is the Walker-Johnson, built by the Walker-Johnson Truck Co., Woburn, Mass., which is rated at 2½ tons capacity.

The Reynolds Motor Truck Co., Mt. Clemens, Mich., shows a truck of 2½ tons rating, which is one of four sizes built by this concern, and the Ultimate truck, produced by the Vreeland Motor Co., Newark, N. J., is shown in two sizes. The Traylor truck, the product of the Traylor Engineering & Manufacturing Co., Cornwells, Pa., is exhibited in a 2½-ton size, and the Huffman truck, 2¾ tons capacity, and the Jackson 3½-ton four-wheel driven truck are other vehicles seen for the first time. The Walter suspended drive, so-called, is a new design by an old manufacturer. This machine is driven by the rear wheels by internal gears by a countershaft having universal joints, suspended on the chassis frame over the dead rear axle.

Good Showing of Tractors.

There was a very good showing of tractors, these including the Cletrac, the Fordson and the Traylor. The latter is entirely new and was first shown at Kansas City. It is rated at three-plow capacity and it is convertible into a cultivator, the claim being that it will serve every purpose for which a tractor or a cultivator could be used. The small manually guided tractors include the Do-It-All, the Beeman, the Tillermobile, the Merry Garden, the New Britain and the Utilitor. These are different sizes and some of them can be utilized with implements that can be ridden.

They are in a general sense built for use on estates or small farms and claim is made that with them approximately the same work can be done for which a horse would be utilized. The Do-It-All is a larger size than the others and has

Digitized by Google

more power. The New Britain tractors are built in two sizes, the larger being comparable with the Do-It-All. Special types of small implements are constructed with these machines and some of these are exhibited. Much interest is manifested in the tractors. With the Fordson tractor an Oliver plow outfit is shown that is produced for use with this particular unit.

The truck department included a number of displays of engines and axles and other construction units, the endeavor of the exhibitors being to educate the visitors to the special qualities that are claimed for them, and there were also several exhibits of service station equipment designed to meet the requirements of truck maintenance.

The accessories and equipment is decidedly the most complete and comprehensive ever seen at a Boston show. Not only is the number of exhibits larger, but they are of practical use and are not of the general type made by supply houses or dealers. This is probably due to the fact that the Motor & Accessory Manufacturers' Association sanctioned the show and its members are participating in it very generally.

Niehoff Automotive Repair Shop Equipment

Patent Applied for

The NIEHOFF TEST KART is the latest achievement in the way of a complete Testing Outfit for locating all electrical trouble in the ignition, starter, generator, battery, wiring, relays, meters, in fact anything in connection with the electrical mechanism of an automobile. It will also recharge Ford magnets on the car. This outfit is a necessity in every repair shop. With it you can render a service to the motorist that will insure you increased business. It will enable you to inform the motorist intelligently, just what has to be done and give him an estimate as to the approximate cost.

The NIEHOFF TEST KART is the ideal rig for the general automotive garage service station. Price, **$350.00.**

We list below a few other important testing outfits.

Niehoff Defectometer—For testing magnetos and coils. Price, **$50.00.**

Niehoff Generometer—For locating shorts in starting and generator armature. Price, **$55.00.**

Niehoff Mag-Charger and Testing Outfit for Fords—Will recharge Ford magnets on the car, burn out shorts, test coils, spark plug, voltage of magneto, etc. Price, **$60.00.**

Niehoff Growler—To test armatures. Price, **$30.00.**

Niehoff Laminated Magnetizer—To recharge all sizes of magnetos for automobiles.
Storage Battery model. Price, **$25.00.**
110 D. C. Current model. Price, **$30.00.**

Niehoff Power T. B. Test Bench—To test generators and magnets after assembled.
Complete with motor. Price, **$550.00.**

KHK
OIL SIGNAL

DEALERS!

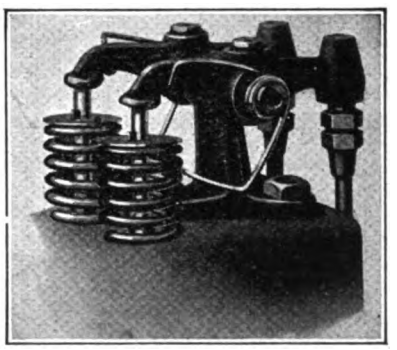
Here's Another Fast Selling KHK Accessory

"When Your Oil is Low Your Horn Will Blow"

Automatically starts horn blowing when oil supply is low. Insurance against burned out bearings, scored pistons and cylinders. Fits all cars. A novel, practical accessory that sells on sight. Popular price. It's the only practical automatic oil signal on the market. Easily attached and no complicated parts to wear or get out of order. Be the first dealer in your town to show this new accessory. It will pay you.

STOP THAT NOISE WITH

KHK Valve in Head MOTOR SILENCERS



Guaranteed to eliminate from 75% to 90% of that clacking noise caused by the action of push rods and rocker arms in Buick, Chevrolet, Oakland, Oldsmobile, Scripps-Booth motors. Adds pep to motor. Eliminates continual tappet adjustment. Dealers say it is the fastest selling accessory they ever saw.

Ask your jobber about KHK Accessories or write direct to

Home-Made Aluminum Rectifier Which Obviates Battery Charging Troubles

IT IS doubtless the case that many more owners of automobiles would equip their cars with storage batteries for lighting purposes if it were not for the expense and trouble necessary in taking the battery out of the car and having it recharged at the service station. This is particularly true of Ford cars not provided with a storage battery for lighting, and the following method of making a device that may be used in the cellar of the house, or garage, will help solve this trouble for many owners.

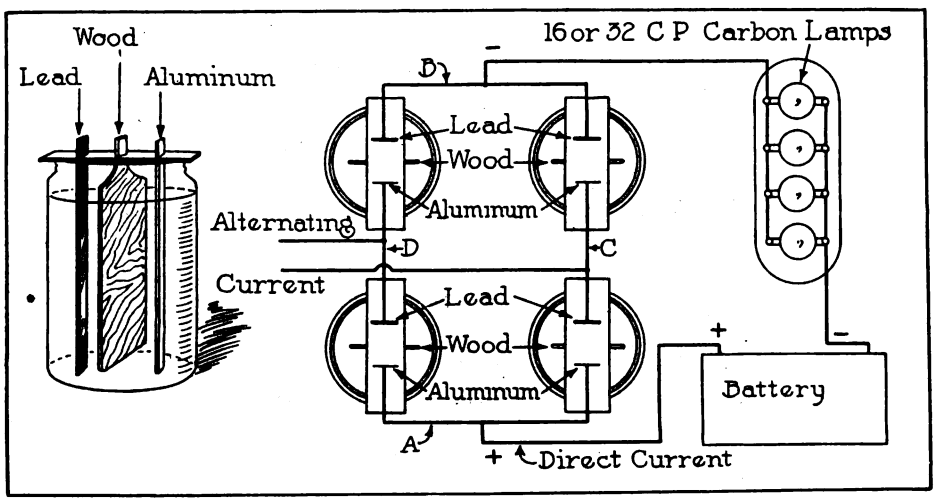

Diagram of Home Made Aluminum Rectifier and Jar Container.

Of the many components on the market for recharging batteries, there may be mentioned the magnetic rectifier, the mercury arc and the motor generator. The cost of any one of these outfits is prohibitive to many motorists when the service rendered is considered. The lowest priced outfit would probably cost $35, while the motor generator set would be in excess of $100.

The aluminum rectifier, which may be made and used at home, would not cost near these figures. and its operating expense would be very small compared to the cost of having a battery recharged at a station. Rectifiers of this type have been made and used in various parts of the country with good results. The materials needed are four jars made of glass or other insoluble non-conducting material, six inches in diameter by 10 inches high, costing probably about $1. Quart Mason fruit jars would be all right and would cost less. Four strips of aluminum, about 1½ inches wide and as long as the jars, are needed, and also four lead or carbon strips as wide as will conveniently go into the jars and of the same length as the jar. A strip of wood or some other non-conducting material is placed between the plates at the top of each jar to prevent the aluminum plates from coming in contact with the lead or carbon plates. One aluminum and one lead or carbon plate is used in each jar and should be an inch or two apart. The jars are then filled nearly to the top with a concentrated solution of common baking soda in pure water, although it need not be distilled water. Each plate is supplied with a binding post at the top to which the connecting wires may be attached.

There may be a tendency for the liquid in the jars to get warm and it may become even hot enough to boil. Trouble of this kind can be prevented by having the four jars set in a vat of water so arranged that cold water may enter slowly and the warm be carried away. A wooden box lined with galvanized iron or painted with a water proof paint would serve the purpose nicely. If the current taken from the rectifier is not excessive this cooling vat may not be needed at all.

To Set Up the Rectifier.

To set up the rectifier, place the four jars in rectangular form as near each other as convenient. Place two of the aluminum plates towards the outside of each of two jars and connect by wire; call this wire "A" as shown in the illustration. Place two of the lead or carbon plates towards the outside of each of the two remaining jars and connect by wire, as at "B." Connect the remaining lead plates, which should be toward the inner edges of each of the two jars, by wires across to the remaining aluminum plates, which are toward the inside of the other two jars. Call one of these wires "C" and the other "D." Attach a wire to the center of "A" and another to the center of "D." These two wires form the circuit taken by the direct current from the rectifier to the lamp bank and storage battery. Connect the alternating lighting circuit wires at "C" and "D," providing a switch in this circuit so that the lighting circuit may be shut off when the rectifier is not in use.

As the voltage of the alternating current used will probably be 110, in most cases it will be necessary to introduce resistance in one of the circuits. It may be better to provide this in the charging circuit as shown, but it might be used in the alternating circuit as well. Sixteen or 32 candlepower electric incandescent carbon globes are about as cheap and convenient for this resistance as anything that can be used. They should be connected in parallel and not in series, as shown; thus enabling the variance of the strength of the direct current by screwing the globes either in or out of the sockets. The number of lamps used will depend upon the capacity of the battery that is being charged. From four to six should be enough for a storage battery of 10 ampere-hour capacity. One can figure that a half ampere will pass through each 16 candlepower lamp that is screwed into the socket, so that when four lights are burning, two amperes will be passing.

At Beginning of Charge.

In the beginning of the charge let all the lights be used for two or three hours, then later one globe may be screwed out of the socket, and so on until on the last hour of the charge perhaps one light will be enough. In general, storage batteries should be charged more rapidly for the first hours than later. If the rectifier is kept cool the battery may be charged at night and thus require but little of the motorist's time and the battery will always be ready for service on the car. There should be a switch in the alternating current circuit to cut off the rectifier, when not in use.

Rectifiers of this type are not of very high efficiency, that is, more current goes in on the alternating side than can possibly be taken from the direct side, but even then the cost of charging at home, if it is rightly done, will be less than the price paid at a service station, to say nothing of the convenience afforded by always having the battery ready for service.

Cost of Apparatus.

When it is seen that the total cost of this apparatus is less than $5, even if all parts have to be bought new, it appears that it will yield a big interest on the investment.

It should be noted that the wire which leads from the two aluminum plates that are connected, is the positive wire on the direct current side and should be connected to the pole of the storage battery marked "X." It is also important that pure aluminum be used for the plates. Some on the market is too impure for good results. The aluminum plates should be at least 1/16 of an inch thick and it might be advisable to have them heavier.

This home rectifying device for charging storage batteries is designed to give satisfaction on a 110-volt alternating current circuit.

SOLDERING OF ALUMINUM BRONZE.

To solder aluminum bronze with ordinary (pewter) solder, thoroughly cleanse from dirt and grease the parts to be joined. Then put the parts to be soldered in a strong solution of sulphate of copper and place in the bath a rod of soft iron touching the parts to be joined. After a while a copper like surface will be seen on the metal. Remove from bath, rinse clean and brighten the surface. These surfaces can then be tinned by using a fluid consisting of zinc dissolved in hydrochloric acid in the ordinary way with common soft solder.

KILLS GLARE SAVES LIGHT

You can't find a lens that more completely complies with the requirements of all anti-glare laws.

You can't find a lens that so thoroughly stops glare, yet gives 74% more road brightness and keeps the rays always waist high.

You can't find a lens that makes night driving so safe, so comfortable, so easy. So why not Osgood Lens for your headlights?—The lens that puts you on the safe side as well as the bright side.

THE NEW

OSGOOD LENS

Cravath Long Distance Type

The lens that does not cut your light in two like old-fashioned dimmers. That does not waste light like colored glass.

The lens that gives you complete control of all your light forward and downward onto the road so you can see every rut and ditch and even people standing by the road side, without a particle of glare into the faces of others coming toward you.

Price $2.90 to $4.50, According to Size

Dealers: You'll find real lens-profit in the Osgood. It is the unquestioned national lens standard. It will outsell all others, and by handling it alone you don't have to carry a bewildering multitude of different sizes of different makes. Complete stocks now ready for instant delivery. Write, wire or phone.

SPRING LEAF LUBRICATOR CO., Dept. 4, Ann Arbor, Mich.

Digitized by Google

A WONDER LUBRICANT FOR CAR AND TRUCK SPRINGS

"Napco" Graph-Oil

Simply apply "Napco" to the sides of the springs with an oil can—

It will make springs work properly.

It will protect springs against breakage.

It will save in repair costs and replacements.

It will stop all spring noises.

It will make the vehicle ride easily.

It will save tires.

It keeps the springs from becoming rusty.

It adds to car service and comfort.

It will penetrate in between the leaves, cover and absolutely lubricate the surfaces of the leaves.

"Napco" used only on one side of a spring will come out the opposite side in from 30 seconds to three minutes without spreading.

A few drops of "Napco" will make easy starting of rusty nuts, bolts and connections, as it penetrates around the threads and loosens the rust.

With "Napco" there is no need to spread the leaves to lubricate them. It makes quick and easy work of a dirty job. Because it is easy to apply, operators and repairers will use it.

Jobbers and Dealers.

"Napco" Graph-Oil is a guaranteed product. It saves in time and labor. There is nothing like it and it is 100% efficient. It is a wonder worker, something essential in the tool kit, garage, repair and service station. It sells in a big way at a good profit to the trade.

"Napco" is sold in 16-oz. cans—List price, **75 cents.**

A special price when ordered in gallon cans or 50-gallon steel drums.

Send your order today. If demonstration is desired, write for sample can.

Stops All Spark Plug Trouble

Universal and Marvel Spark Plug Intensifiers

The spark is always visible. It will make a plug fouled with grease or carbon or with broken porcelain fire perfectly.
When the magneto is not working, a wire short circuited or broken, or the battery out of order, the Intensifier will prove it at a glance. It can be adjusted to overcome almost any ignition weakness. It increases the voltage and spark and makes starting easy. Saves in oil and gas. Adds to power, eliminates carbon and preserves plugs.
Instantly attached to any screw terminal plug and will last as long as the car.
JOBBERS AND DEALERS—This is a wonder worker and sells at a glance. Sold on a money back guarantee. Liberal discounts and prompt deliveries. *Send for full information.*

WHEN GEAR MEETS GEAR

When gear meets gear there is bound to be more or less friction. But that friction can be held down to a negligible minimum by proper lubrication.

DIXON'S GRAPHITE Transmission and Differential LUBRICANT

is specially compounded for gear work.

It stands the terrific pressure that is set up when gear meets gear—pressure that "squeezes out" ordinary oil or grease and allows a ruinous metal-to-metal contact—and it sticks to the gears when they are idle, which is just as important.

It lubricates efficiently under all temperatures—without "bunching up," congealing or "breaking down" as is the case with ordinary lubricants.

Stock this Dixon Lubricant and sell it to your customers. You'll be surprised at the sales results.

Write for prices and Booklet No. 49-G.

Also ask about Dixon's famous Cup Grease.

This Test Always Convinces

Demonstrating the Famous "Lead Pencil" Test

Take any lead pencil and you can convincingly prove to even the most skeptical motorist that the Twin Fire, by giving two independent sparks, will banish forever all motoring troubles due to spark plugs.
This quick and simple test easily demonstrates just how the Twin Fire always gives two distinct, hot and instant sparks. Also, it proves that if dirt, oil or carbon should clog one point and cause it to short—the other point will continue to fire.

The Handy Twin Fire Demonstrator for Dealers

This neat and compact counter display enables the dealers of Twin Fire to quickly prove how the plug is immune to oil and carbon. It is a quick sales-maker for The Dealers.

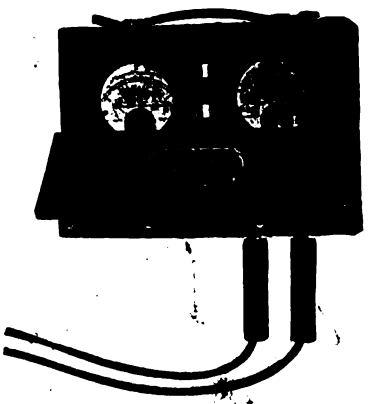
Equip your Garage with the

Weston **Model 441**

"Fault Finder"



and give your customers the kind of service they demand. It means business for you.

The "Fault-Finder" is a Voltmeter and an Ammeter mounted in a durable, compact and convenient carrying case. The Voltmeter ranges of 0.2-0-8 and 2-0-30 volts enable the user to test out every part of the electrical equipment for practically every trouble. The Ammeter range of 30-0-30 amperes is right for determining charge and discharge rates for adjusting relays, etc. The Ammeter is protected against burn-out by a standard automobile type fuse accessibly located. Long rubber-covered flexible cables with spring clip terminals are used for making connection between the instrument and the apparatus under test. A complete Instruction Book accompanies each instrument.

Get Ahead of Your Competitor! Write at Once for Information.

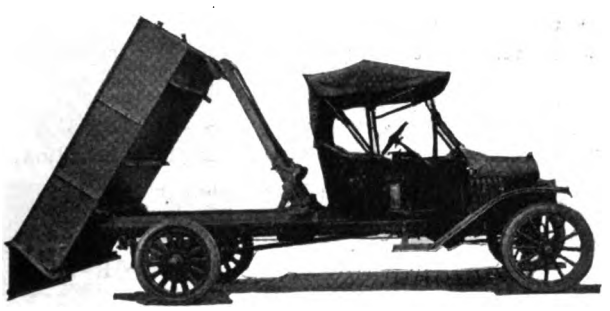
THE PEERLESS HAND HOIST

Single Cable Quadruple Worm Gear Drive

For Any Make or Type of Truck.



A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool-proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

We specialize in building all-steel bodies for any need.

FACTS ABOUT TIMERS

Your timer is the heart of your ignition system. In all the simplicity of its operation, it is many times the unsuspected cause of much motor trouble and is the continual source of wasted gas if not perfectly timed.

In the most cases timer trouble is due to one or more of the following causes:

Imperfect timing. Uneven and badly worn contacts. Dirty contacts. Contacts becoming insulated with oil. Inferior contacts constructed of poor material.

ELIMINATES ALL TIMER TROUBLE

The new Duntley Magneto Break Timer eliminates all these trouble makers and insures an easy starting and an ever smoothly running motor at all times, because

It is self-cleaning.

It has no whirling contacts to skip over a metal segment to wear out or become insulated with oil.

It is equipped with genuine tungsten points that will not corrode, pit or burn out.

It is friction proof and requires no lubrication.

It is so designed and constructed that it is always perfectly timed.

DEALERS: Write us today. Our proposition is mighty interesting.

J. W. DUNTLEY

1003 Michigan Ave. **Chicago, Ill.**

REPEAT SALES—*Where the Profits Lie*

THE succession of re-orders from Pep Spark Plug dealers check off rapid turnovers—repeat business—the kind that piles up profits.

Self-cleaning—can't foul from carbon or oil—Pep's trouble free performance wins friends that stick.

Our guarantee—"Your Money Back If You'll Take It."

Go-ahead dealers should write for proposition.

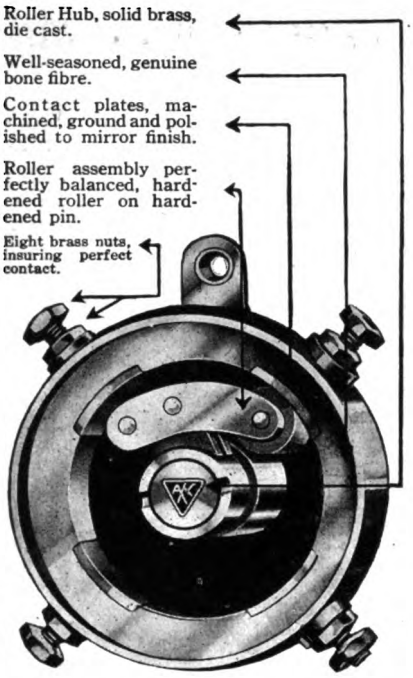
Send facts about A-K Timers and other A-K products

Send This



A-K TIMERS have a die-cast Hub of *brass*, instead of white metal; eight brass nuts instead of four iron nuts. They are *double-tested* for short circuit. Their appearance alone radiates in every detail greater refinement and better quality. These things make a significant difference and are some of the reasons why A-K TIMERS are recognized in the trade as *outstandingly superior.*

In every detail this is a *better* timer, built with painstaking precision to render satisfactory service indefinitely.

A-K products have the reputation of being *better.* Buyers the world over are giving A-K Timers, A-K Horns, A-K Spring Hangers and other A-K accessories *first call.*

Our large resources, efficient factory organization and heavy production enable us to *be* the high standard toward which others aspire, yet maintaining prices so low that they monopolize your consideration.

Send the coupon (in the upper corner) for detailed facts about A-K Timers and other A-K products. Let's do it NOW.

A-K Timers for Fords

Security Auto Lock

Affords every protection to Ford car owners that a perfectly designed and extremely well made lock can give. While neat and attractive it is built very strong. In operation it is positive and the car can be left with a feeling of confidence that no one but the owner can use it.

It is the original loose wheel lock for Fords.

It is approved by underwriters.

It will reduce insurance premiums 15%.

When locked the car cannot be towed.

List Price, $6.00

It makes the Ford thief-proof

Anyone can easily install the Security in ten minutes. No drilling, filing, sawing or chiseling necessary. It is made of solid brass. Nickel plated finish.

TO DISTRIBUTORS

When this lock is shown no other will satisfy Ford car owners. It sells at sight. Our trade discounts are liberal and our proposition will interest any one that can sell high grade car protection at a moderate price. *Write for details today.*

President
A. J. STEPHENS RUBBER CO.
Capitalized $1,5000,000.00

DEALERS—My New Selling Plan
Will Increase Your Daily Profits $50 or More

No matter where you are located, nor how much competition you have, I can show you a most extraordinary selling plan that will actually add from $1,000 to $1,500 monthly profits to your business. This is no experiment. Hundreds of enthusiastic dealers throughout the country are using my selling plan and enjoying big profits. *J. W. Neal of Sedalia, Mo., sold over $6,000 worth of Stephens Products in less than a month. F. F. Swinson, Pratt, Kans., made $400 profit in 5 days. Reinhart Motor Co., Ottawa, Kans., sold over $2,000 worth of Stephens Tires in 10 days. McDavid Bros., Excelsior Springs, Mo., made over $300 profit in 4 days.* I can refer you to hundreds of other dealers who have done as well. This is the best proposition ever presented to you.

I Will Bring a Steady Stream of Customers Into Your Place of Business

By using big advertisements in your local paper, showing your name as distributor for STEPHENS TIRES and accessories, I will bring you business that you never hoped to get. My plan is to do this advertising without cost to you. My plan is to increase your business without increasing your overhead, in other words, to *positively guarantee* the sale of our products. Not a cent is required until I prove my claims to you. Write me today for all information. Learn the facts, then judge for yourself as to the money-making possibilities.

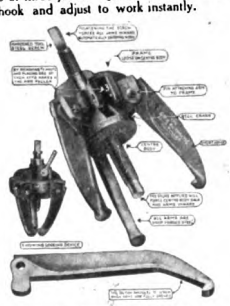
GREB AUTOMATIC GRIP PULLER
BEACH PATENT

"The One Best Bet" in Wheel, Gear and Bearing Pullers. Combinations of two or three jaws. Quick, Strong, Durable, Efficient and Simple. Positive Grip, cannot unhook and adjust to work instantly.



Greb Automatic Grip Puller

East of Rockies

Greb Arbor Press Base—designed to be used with the three long jaws of No. 1 Puller. Comes complete with two V Blocks and one V cap. Makes desirable equipment for pressing off gears, bushings, bending pipe, straightening shafts, etc. It is a good Bench Plate. Width 14 in., Depth 2 in., Diameter of Center Opening 3 1/4 in. Weight approx. 60 lbs. **Price complete $12.50**

Greb Bearing and Race Attachment for No. 2 Puller has a Knife edge and can be forced behind magneto, electrical generator and self-starter bearings and races where it is impossible for the jaws of any Puller to be attached. This attachment when used back of small gears and bearings not only saves them but the ends of the Puller jaws as well. Capacity—Bearings and Races up to and including 2 in.
Price complete $4.00

Greb Gear Attachment for all sizes of Greb Pullers has a 1/8 in. edge and can be forced behind gears where there is little or no room. This attachment when used back of small gears furnishes something for the jaws to get hold of and as it lays flat against the back of the gear it permits an even pull. Made in two sizes. Small size has capacity to take gears up to 3 in. on its front and 4½ in. on its back.
Price complete $5.00

Large size has capacity to take gears up to 4 in. on its front and 6 in. on its back.
Price complete $6.00

No. 1 Senior Size—designed for heavy work—a one man Puller with a locking device. Capacity 1 to 13 in. Complete with two sets of jaws, 7 in. jaws open to 10 in., and 12 in. jaws to 18 in. Screw of hardened steel, 1 in. diameter, 14 in. long. (See Arbor Press Base Attachment.) Shipping weight 20 lbs.
Price complete $25.00

No. 2 Junior Size—designed for all types of motors. Will remove magneto and pump shaft gears, couplings, etc. An efficient tool for all small work. Capacity 1 to 7 in. Complete with two sets of jaws 2¾ in. jaws open to 4 in. and 6 in. jaws to 7 in. Screw of hardened steel, 9/16 in. diameter, 7¾ in. long. (See Bearing and Race Attachment.) Shipping weight 4 lbs.
Price complete $12.00

No. 3 Intermediate Size—designed to pull the average motor gears such as timing, pinion, transmission, differential, and crank shaft gears, sprockets, universal joints, pulleys and for general work. Capacity 1 to 12 in. Complete with two sets of jaws, 5 in. jaws open to 8 in., and 9¾ in. jaws to 12 in. Screw of hardened steel, 7/8 in. diameter, 10 in. long. (See Gear Attachments.) Shipping weight 15 lbs.
Price complete $18.00

SCOE CARBURETOR

For Ford, Maxwell, Briscoe and Dort Cars

MAKES A FORD RUN LIKE A SIX

SAVES ITS COST IN 60 DAYS

Any dealer can send to us for a Scoe Carburetor, assured in advance that his customer will not ask his money back. Scoe Carburetors don't come back. Their owners are satisfied users.

More than that, they are actual boosters and send new customers to the dealer.

It would be worse than folly for us to say these things to you if they were not true.

This carburetor embodies no new or untried principles.

Its makers simply recognize the fact that speed and power and smoothness are all dependent upon a correct mixture, and have devised simple means to provide a correct mixture—not sometimes, but ALL the time.

Let us send you a Scoe on 30 days' trial. Pay half the net—$4.25—on receipt of Carburetor. Put it on a customer's machine and check its performance for 30 days.

Then pay the balance or ask for refund and we will make it without question.

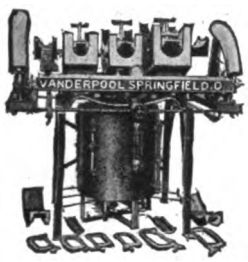
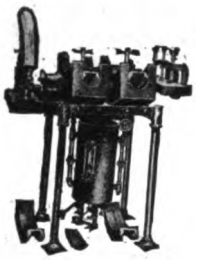
VANDERPOOLS LATEST IMPROVED PATENT APPLIED FOR RETREAD MOULDS

(Exit old methods.) RETREAD Our Way With Sand Bags, Better Than Air Bags.

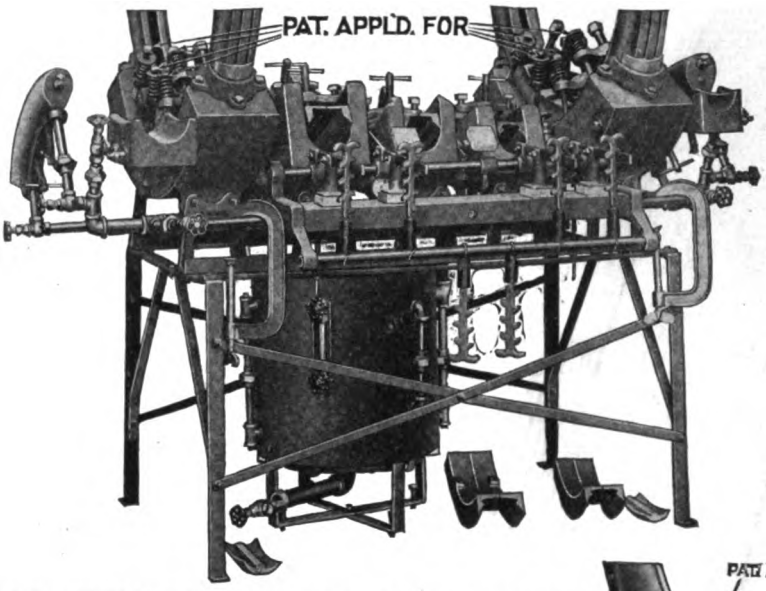


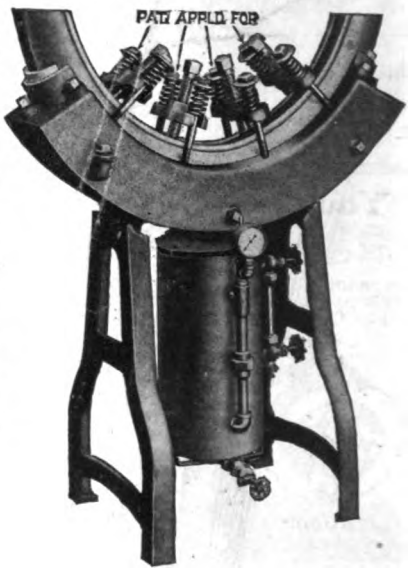
3 Cavity



2 Cavity

Single Cavity





VANDERPOOL FIVE CAVITY is the most improved Tire and Tube repair and retread Vulcanizer made, capacity about $300.00 worth of casing tube and retreading can be done with it in a day. Profit about one-half. Many are selling their old style machines and installing a VANDERPOOL FIVE CAVITY. It covers the business. It's an advertisement in your shop. It's the best to be had. We get hundreds of letters from our pleased customers. We have been making Vulcanizers for about eight years. We make Vulcanizers so they do the best work.

The patent applied for powerful springs on our retread molds forces and holds the tire down while it settles in the ribbed tread molds until Vulcanizing is complete, resulting in better retreads, overcoming separation and blisters. A better retread than with old methods. A size machine to fit most any size shop.

Send for our Tire Repair Manual, 25 cents, and price list of Vulcanizers.

The Standard Spark Plug of the World

EIGHT AC Spark Plugs fired the engine of the Peerless that broke the stock car record for the arduous run between San Francisco and Los Angeles.

Eight AC Spark Plugs functioned perfectly during nine hours and twenty minutes of punishing road speed, desert fighting and mountain climbing.

Eight AC Spark Plugs played a vital part in the shattering of a record that has withstood repeated challenges for five years.

What these eight AC Spark Plugs did in the engine of the time-defying Peerless, eight other AC Spark Plugs, or eighty, or eight hundred, or eight thousand will do.

They will prove unfailingly dependable no matter in what make of car they are used or what service is demanded of them.

That's why it pays to sell AC Spark Plugs as well as to use them.

Spark plug dealers, like spark plug buyers, can't go wrong with AC's.

Oro

GOOD as GOLD

—the Good Connecting Rod!

Made of the very finest steel—drop forged!

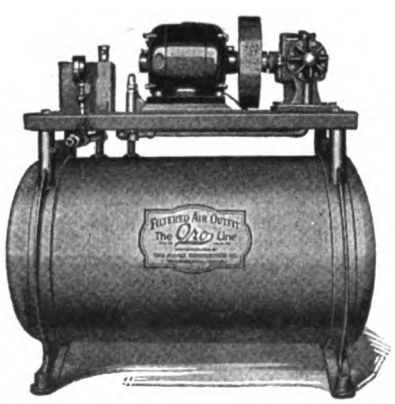
A CONNECTING Rod for Ford Cars that is made as you wish itmade—sturdy, reliable, long-lived. This rod will stand up as long as the car—eliminating all necessity for tinkering with the "underneath" part of the engine. The steel used is 30 to 40 point carbon, perfect in quality and drop forged. The babbitt is a scientific combination which gives unusual satisfaction.

This Connecting Rod, although much better than other rods, costs less than most of the others. It is economical to buy—economical to use.

The ORO Connecting Rods have been in use for many years—under all conditions—and they have proved every claim we make for them. Dealers prefer them—owners demand them. They realize the connecting rod is such an important part of an engine that only the very best quality will do.

Write us for information. We'll tell you about the ORO Connecting Rods—and also about our large line of superior automobile accessories.

We Also Manufacture "Oro" Filtered Air Outfits!



The ORO Filtered Air Compressor Outfit provides a perfect source of air—day and night—without attention from you—air that is absolutely free of oil, dust and dirt. It's a business builder—a business holder. We manufacture Au-To Air Compressors for all garages, large and small. Ask for facts about the entire line.

The Au-To Compressor Company

Stop Leaks!

Would you think of putting a paper stopper in a bottle of lubricating oil and then turn it upside down? Of course you wouldn't, because you know that in a short time the oil would seep through the paper and run out.

Yet many repair men use paper or cardboard gaskets, expecting them to perform their work efficiently.

If you wanted to seal a bottle tightly, you would use a cork. And when you want to secure liquid-tight joints, you should use cork gaskets. You know that cork is non-absorbent and will not let oil, gasoline or water seep through.

Acco Cork Gaskets are easily applied, and if a thin coat of shellac is put on one side and some graphite on the other, the gaskets will not tear when the cover or housing is removed.

For general repair work Acco Cork is sold in sheets 12x36 inches, 1/16, 3/32 and ⅛ inch thick by supply jobbers. For Ford cars Acco Cork Gaskets are packed in dust-proof boxes containing a complete set of ten gaskets of any one shape.

A Complete Outfit

Perhaps your establishment demands a compressor outfit of peculiar arrangement– possibly no assembled machine would conveniently fit the available space or meet other requirements. If this is your problem, the Brunner line includes various items from which you can select the proper apparatus and set it up to meet the conditions. Either belt driven or motor driven compressor models are offered—also a complete line of valves and fittings.

For instance, the No. 1 Outfit:— A No.102 compressor with proper tank, gauge, hose, valves, etc., all boxed and ready to install in the manner best adapted to the location. Full instructions are furnished and any questions will be answered by Brunner engineers. This outfit or another similar Brunner outfit, may be just what you have been seeking.

Consult your jobber or write us giving full details of your air service problem.

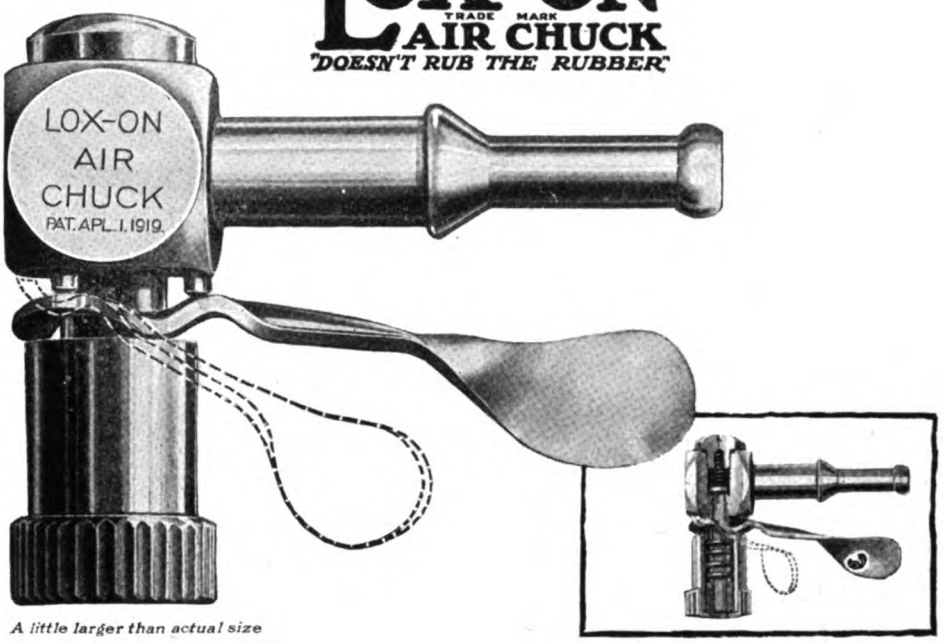
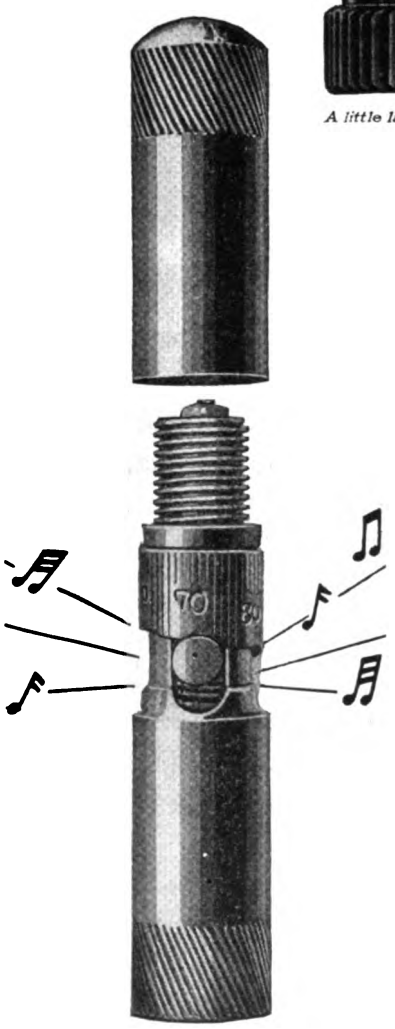
LOX-ON
TRADE MARK
AIR CHUCK
"DOESN'T RUB THE RUBBER"



A little larger than actual size

Sectional view



About twice actual size

The Most Used Thing In An Air Station

THE Air Chuck. Everyone uses it. In a short time it gets leaky, inefficient and has to be repaired. Over and over again, new washers have to be put in and new chucks bought.

You can positively stop all these inconveniences by using a Lox-on Air Chuck. It is guaranteed not to leak—to last indefinitely *without replacing the washer,* and to be handier and more reliable than any other chuck ever made. It cuts down electricity bills, wear and tear on pumps and replacement charges. It does not push over the valve threads like other chucks, but opens and grips the valve like a hand, saving all of the wear which usually ruins a rubber washer in a half day. The universal stem fits either ¼ in. or ⅜ in. hose. $3.00 each.

The Whistler Pressure Regulator

Dealers: Here is an opportunity to get one of the surest paying lines in the accessory business. The Whistler Pressure Regulator and the Lox-on Air Chuck.

Backed by strong advertising and merchandising service, these products are making friends and profits all over the country. Write us or ask your jobber.

Why Mechanics Approve It

THERE has long been a demand from mechanics and motorists for an efficient piston ring having the quick-seating feature of a narrow ring, with the wall tension of a wide ring.

It is obvious to any mechanic that when the BURD Quick-Seating Piston Ring is installed in worn cylinders, the outer edges will lap in more quickly and conform more nearly to the contour of the cylinder wall than any other type of piston ring.

Mechanics know also that it is desirable to minimize the loss at the opening of the piston ring to prevent leakage and carbon troubles. BURD Quick-Seating Piston Rings are installed to fit snugly—the points just meeting—no clearance between the points being necessary. They therefore indicate the minimum of opening after seating has been accomplished.

The BURD Quick-Seating Piston Ring is of the step-joint type, the outer surface—which comes in contact with the cylinder wall—having a channel .002 of an inch in depth in the center of the face, and raised edges which lap in quickly, seating perfectly with a hard, glass-like surface in harmony with the cylinder wall in about one-fifth of the time required to seat other types of piston rings.

The channel in the center carries an oil film that prevents leakage during the process of seating and insures perfect lubrication.

BURD Quick-Seating Piston Rings are made in all sizes and oversizes for practically every make and model of gasoline engine. List Prices: Sizes up to and including 4 inches, 60c each, and sizes over 4 inches, up to and including 5 inches, 70c.

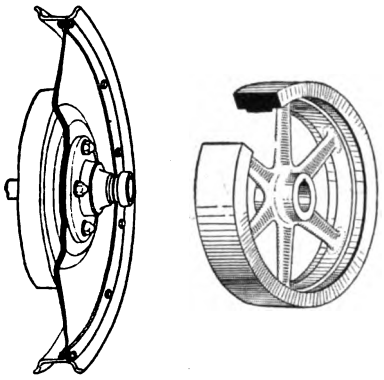
Facts You Should Know About the Wheels of Your Motor Car



Sectional Views of a Disteel Wheel and the Ordinary Fly Wheel

The weight of a Motor Car Wheel should be concentrated at the hub. A good example of what a Motor Car Wheel ***should not*** be is the fly wheel. Instead of having the weight concentrated at the hub, the fly wheel has its weight concentrated in the rim.

There is a reason for that. The purpose of a fly wheel is to preserve momentum. It keeps going. Because of the weight in the rim, the fly wheel is difficult to start and difficult to stop.

The Motor Car Wheel should start easily and stop easily. That is the reason why the weight should be at the hub, not in the rim. This saves power, gasoline and the mechanism of the car.

The spokes, too, of a fly wheel are rigid, untapered, unresilient. A fly wheel is not dished. There is no spring in it. Needless weight at the rim increases the hammering effect of every blow the tire takes from the road.

Be Sure Your Motor Car Wheel Is Not a Fly Wheel.

The Disteel Wheel is a single, dished and tapered disc of steel. This steel disc tapers in thickness from the hub to the rim, which makes the wheel lighter as well as vastly stronger and more resilient. And the wheel is dished inwardly like a bow. Also, the rim is offset where it is fastened to the disc.

It is a basic principle of wheel design that these three features, the taper, the dish, the off-set rim, diffuse and dissipate road shocks before they can reach the hub.

Back of the vastly greater beauty of Disteel Wheels, you will find upon investigation these fundamentals of scientific wheel design and construction that mean greater comfort, safety and economy in motoring.

BLUE RIBBON PRODUCTS

Are a Standard Line

Jobbers and Dealers stock the full Blue Ribbon line as they do all other tried, proven and constantly selling goods.

Blue Ribbon products are made by specialists who depend wholly on the quality and service giving satisfaction afforded by lines bearing their trade mark.

There can be no experimentation at the expense of the consumer, dealer or jobber. All Blue Ribbon Specialties must be as good as they are practical in every day use as it is possible to make them.

A nation wide trade, enormous expenditures devoted to development and promotion work as well as the maintenance and operation of the largest plant of the kind in America is too great a stake to gamble against quality.

Blue Ribbon Products today stand supreme. They are passed over the counters backed by an unqualified guarantee on the part of the trade that can leave no doubt as to their merits.

That is why Blue Ribbon Products are a standard line and will always continue to be so.

That is why all jobbers and dealers sell and list them in their catalogues.

Above all else that is why the consumer buys Blue Ribbon trade marked products. Blue Ribbon Products cost no more than others, yet represent the most profitable line that can be placed by the jobber or dealer.

If the **BLUE RIBBON** trade mark is to be seen on your shelves or counter you have a silent salesman in your store that is always working, always earning.

All Blue Ribbon Specialties are sold in quantities to meet any requirement.

The full line affords a complete line and it pays to specialize in known quality goods.

Blue Ribbon Specialties Include:

Blue Ribbon Cold Cream Hand Soap
Contains no pumice or sand.

Blue Ribbon Leak Proof Cement
A permanent radiator cement.

Blue Ribbon Nickel Polish
For nickel parts and trimmings.

Blue Ribbon Auto Body Gloss
For automobile or furniture.

Blue Ribbon Lightning Carbon Remover
Quick and positive in action.

Blue Ribbon Black Enamel
For lamps, hoods, radiators and metal parts

Blue Ribbon Auto Top and Seat Dressing
A waterproof dressing that restores tops and seats.

Blue Ribbon Hand-On Patch
A self-vulcanizing patch for shoes and tubes that never fails.

Blue Ribbon Cream Metal Polish
For any metal. An easy, quick working, satisfactory polish

Blue Ribbon Oil Soap
A pure vegetable oil soap for any purpose. All quality and efficient.

This is the time to consider your winter and spring requirements

There is Good Dealer Profit In Equipping Fords With Non-Stallable Starting and Lighting Outfits

Dyneto TRADE MARK REGISTERED

Sell a high grade, dependable Starting and Lighting System—one that is proven to have "big car" quality. Dyneto—a NON-Stallable Starting and Lighting System for $85. (With a good dealer profit.)

The System is complete, with motor-generator, storage battery, battery box, all wiring, switches, brackets, sprockets, etc., etc. Can be easily installed.

It has the same characteristic features as the Dyneto system that has been used continuously since 1913 on America's highest priced light weight car, the Franklin.

Makes Fords NON-Stallable

The big advantage of this system over others is that it makes the engine NON-Stallable. If too sudden application of clutch brings motor to stop, Dyneto instantly takes hold and starts it—**automatically—driver** doesn't have to press a button or move a lever.

In emergency, Dyneto is powerful enough to move car out of danger, without the motor.

Liberal Discounts to Live Dealers

Only a limited number of these outfits are available for immediate shipment, and orders will be filled in the order in which they are received. Write for discounts for dealers. Better wire quantity you wish reserved for you.

"This'll Get You Out In a Jiffy"

Users of Walker Badger Jacks talk in terms of seconds. Jacking up a car—under any condition—means no more to them than getting their Walker Badger out of the tool box—slipping it into position—pumping a few quick easy strokes with handy handle—that's all.

Walker Badger Jacks are built on the idea and fact that a Jack is an emergency tool—that when there is need for a Jack, it is an urgent need. They possess the sound excellence of construction, strength, durability—which enable them to unfaiteringly and unfailingly meet every demand.

Designed to produce greatest lifting power with least leverage. Constructed of toughest, longest wearing materials. Fewest possible working units. Lock washers on all cover screws—never work loose Never become rattle traps.

Malleable iron trip levers. Cut steel rack bar—every tooth uniform. Lifting pawls of high carbon drop forged steel—machined in gigs, insuring one-thousandth of an inch accuracy of fit. All moving parts retain original shape through hardest usage.

Never grow rickety with age. Rigid factory test for lifting capacity — labeled with lifting capacity and guaranteed to raise rated load.

Packed in neat, cardboard carton, abolishing all possibility of damage in shipping and storage.

DEALERS—Walker merit affords exceptional opportunities in the shape of exceedingly profitable trade. Catalog listing the whole Walker Badger Line—"A Jack for every Job"—and sales proposition on request. Write for them today.

GILL

The Perfect One Piece Piston Ring

"See that joint? That's the reason why I install Gill Piston Rings on my jobs. It's the one piston ring that I consider mechanically perfect."

When you hear a mechanic talk like that you may be sure there is something about the Gill Piston Ring that makes it different from any other. Mr. Dealer, try it out this way. Show a Gill Ring to the best automobile mechanic you know and see if he doesn't endorse what the man in the picture is saying.

One look at the double step interlocking joint shows him that the Gill Ring can expand from 1/8" to 3/16" without any loss of compression. That means it will adjust itself to oversize, worn or out of round cylinders within reasonable limits.

Look into this piston ring proposition for yourself and when you compare the Gill with any other ring on the market you will be convinced like the thousands of other men who handle this ring exclusively.

Send for the new Gill Piston Ring Size Directory, complete, convenient, and full of just the information you need. It is free to the trade.

Dealers—Ask your jobbers about them

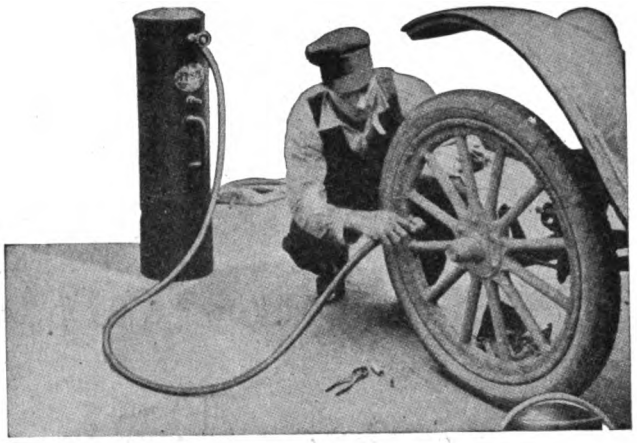
EARNS MONEY



SAVES MONEY

The ATSCO PORTABLE AIR TANKS

A Roadside Repair Wonder Worker

TANK MAKERS FOR NEARLY THIRTY YEARS

Always ready for use with the emergency car or truck. With it the largest tire may be inflated in a few seconds, saving time and cost and the use of the unreliable hand pump.

This time and labor saved is clear profit to the repairer, and the service afforded has even greater value to the vehicle owner. The hardest work with tires is inflation, but with an Atsco tank it is almost instantly done, and to the PRECISE PRESSURE RECOMMENDED.

An Atsco tank is light weight, easily carried and may be operated by any person. Its utility in garages and service stations is manifold. In many stations they are placed in all departments and several are used.

In any garage or station where service is a factor and competition keen Atsco portable air tanks are a necessity. The tanks will endure for years and be constantly profitable. They will earn their cost in a brief period; after that the service and profit are clear again.

List Price $30.00 F. O. B. Pittsburgh

Atsco tanks can be filled by any compressor system. They are 36 inches long and 10 inches diameter, constructed with genuine copper brazed seams and suitable for 250 pounds working pressure or 500 pounds test pressure.

The equipment includes a standard tire filling valve, the best pressure gauge made, a protection valve cap for filling at a compressor system connection, and an eight-foot hose, everything that is necessary.

We specialize construction of garage pressure tanks, and have in stock or build to specification tanks of any size or pressure requirements. Our tanks are used by most of the producers of compressor and air storage systems.

These tanks are genuine copper brazed construction and the seams and joints are far stronger than the stock metal. They will not crystallize or crack and are guaranteed air tight.

We make pumps and pressure tanks for all purposes.

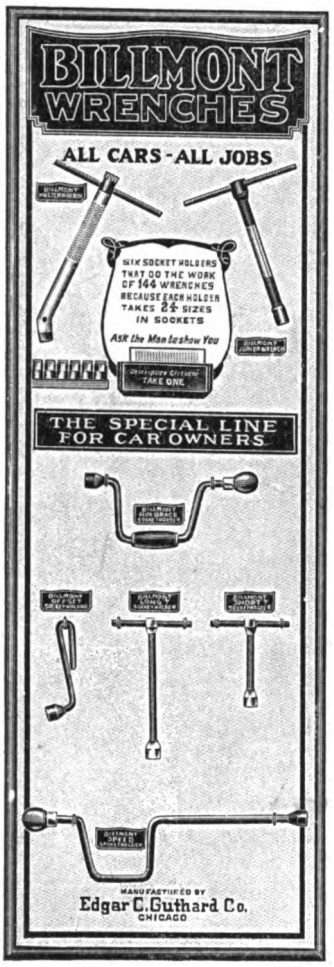
Ready Made Sales



More than half the work of selling Billmonts is accomplished through our new display board. While you are waiting on someone else the customer sells himself.

Lithographed in three colors on sheet steel, backed and mounted with finely finished hard wood—easel back or hanger.

DEALERS

Write for special display board proposition.

All Billmont wrenches have special Billmont universal nosepiece, which takes 24 sizes in sockets and permits the use of one set of sockets for all wrenches. For instance one speeder and 24 sockets make 24 sizes of speeders—a new and exclusively Billmont feature.

BILLMONT MASTER WRENCH
"The Wrench that Spins 'em off"

Is a universal socket wrench with driving parts encased in heavily knurled outer nickel tube. Hooked nose reaches into otherwise inaccessible places—few nuts or bolts are too hard to get at, too tight to turn.

Most jobbers carry the Billmont line—if yours does not, write us and learn how to profit by the "socket wrenches that are different."

NOTICE TO SUBSCRIBERS.

The shortage of paper is the cause for the delay in the publication of the April issue of the Accessory and Garage Journal.

Paper manufacturers have never before experienced so great a demand, and production has not kept pace. Added to this is the cumulative effect of railroad blockades, strikes, embargoes and other causes of transportation retardation.

Should your copy reach you late, please be patient. The publisher is doing all that is possible to serve you to your satisfaction, but cannot expect to do this until the paper industry returns to a normal output, and railroad congestion reduced. You will continue to receive your magazine as near the date of publication as it is possible to produce it.

DEALERS who handle Harvey Springs can supply a spring quickly for any make or model of passenger car or truck—a spring specially built for the car for which it is needed.

Harvey jobbers are located in the principal cities, offering a convenient source of supply for dealers in all parts of the country.

That's one type of Harvey Service.

Another is the superior service every Harvey Spring gives.

Breakage is next to impossible with a Harvey—it's guaranteed against breakage under all emergencies.

Guaranteed also against sagging. Yet the Harvey affords an unusual degree of resilience which makes the Harvey-equipped car easy riding and unusually comfortable.

Write for the Harvey Book—a complete guide for ordering any of the 1500 different Harvey springs. Also ask about the many ways we help Harvey Dealers make sales.

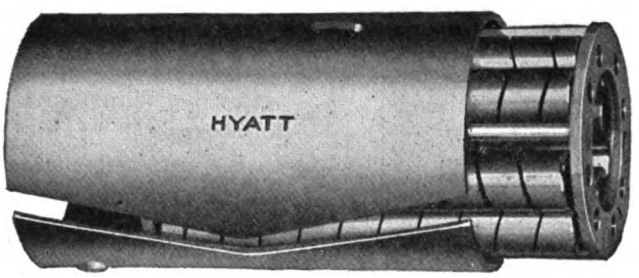
A Word to Ford Owners!

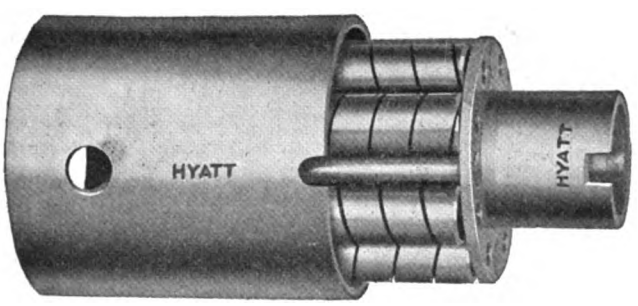
Look for the Name "HYATT" on the Bearings You Buy

THESE photographs show the Hyatt Roller Bearings used in Ford rear axles. The bearings are designed and manufactured as complete units. Each bearing-part has a direct relationship to every other. Each part is made from steels especially selected for the duties it has to perform. Each part is developed to give the particular qualities of hardness and strength needed by each individual piece for its peculiar kind of work. If any of these parts fail to conform to the required standards the bearing will not function efficiently.



Hyatt Bearing Used in Ford Rear Axle

Being a complete unit, damage to one of the parts of a Hyatt Ford Bearing impairs the service value of the entire bearing. In case of such damage a complete new bearing should be used. A complete new bearing will insure far more efficient service than replacement of damaged bearing-parts with new parts. In the future therefore the Hyatt Roller Bearing Company will distribute through the trade only complete bearing assemblies.



Hyatt Bearing Used on the Ford Driving Shaft

To insure the Ford owner that the Hyatt Bearings which he buys are composed of genuine Hyatt parts all outer and inner Hyatt Ford races are stamped with the name HYATT. Be sure that such bearings that you buy are so marked.

HYATT ROLLER BEARING COMPANY

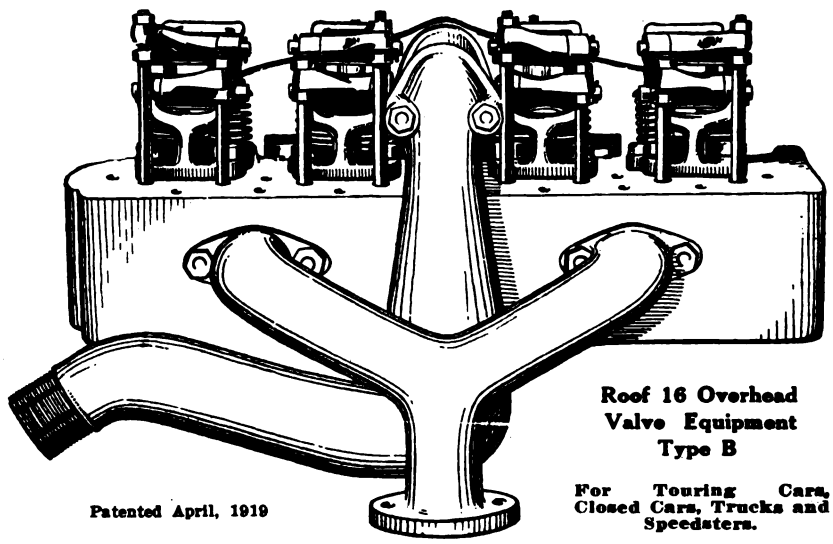
POWER and SPEED ROOF 16 OVERHEAD VALVE EQUIPMENT for FORD MOTORS



Patented April, 1919

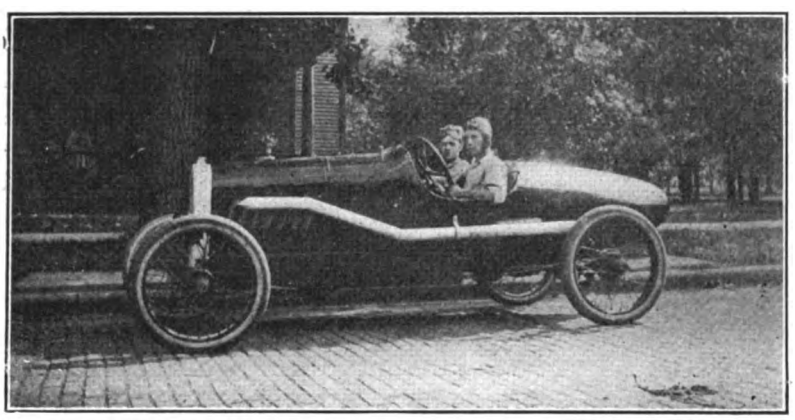
Roof 16 Overhead Valve Equipment Type B

For Touring Cars, Closed Cars, Trucks and Speedsters.

The Most Remarkable Power Device, Even in This Inventive Age

Hill climbing for touring cars—pulling power through sand and mud—doubles the hauling capacity of converted Ford truck-speed for mile and half-mile tracks to rival the fastest cars built. Ford racing cars with our Cylinder Head Equipment and special racing parts have attained speeds from 80 to 100 miles per hour. Hill climbing and pulling power for touring cars, closed cars and trucks. Cylinder head equipment all ready for installation. It takes the place of the regular Ford Cylinder Head. Any mechanic can easily and quickly install it.

Comparison Brake Horse Power Tests at the United States Bureau of Standards gave Standard Ford motor with regulation carburetor 18.7 Horse Power. The same motor with 16 Valve Head and regulation carburetor 22.4 Horse Power. The same motor with 16 Valve Head and Special carburetor 29.7 Horse Power. Recent tests at Bureau of Standards with Type B gave 32 Horse Power. We are Manufacturers and Distributors of speed and other specialties for Ford cars; 3 to 1 gears, high speed camshafts, aluminite, light grey iron pistons, lynite pistons, aluminite connecting rods, racing spark plugs, racing carburetors, roller bearings, counterbalances, wire wheels, multiple speed transmission, high tension magnetos, special oiling system, special worm and gear, steering gear, racing tires, racing bodies, hood and radiator, parts for underslinging chassis. Tell us what you want. We can supply it. Racing quality. Lowest prices. Send for our Complete Literature on how to build fast cars and double the value of your converted Ford Truck and descriptive circular on Speed and other Specialties for Fords.



J. MARSHAL YEATS
of CHAMPAIGN, ILL.,

in his beautiful Speedford racing car equipped with the Roof 16 Overhead Valve Cylinder Head. This car has attained a speed of 75 miles per hour. An excellent example of high class racing car construction with Laurel special parts.

Ford Racing Car Speed Kings

From the hundreds of fast Ford car drivers we mention the names of a few of those who have won laurels through the use of our equipment and some with speed records approaching that of the highest priced racing cars in the world, ranging from 70 to 97 miles per hour, and who on mile and half-mile tracks have closely approached the world's record with their speed cars:

Sterling Spark Plugs

Tractor Plugs Are Best for Heavy-Duty Trucks

Loaded to capacity, yet negotiating the most difficult roads with ease, your motor truck equipped with Sterling Tractor Spark Plugs, will utilize every ounce of its power.

Sterling Tractor Plugs have been developed to meet the demands of heavy-duty motors whose intense heat shortens the life of ordinary plugs.

Motor truck owners quickly discovered that these tractor plugs, feeding a strong, steady current into the cylinders of the engine, give a greater and surer power when loads are heavy and roads rough or hilly.

Sterling Tractor Plugs are made with a porcelain core of unusual strength; an extra deep combustion chamber, and the center electrode, of monel metal, will not warp. Then, too, Sterling Plugs are separable and easily cleaned.

Garages and supply dealers everywhere sell and endorse these guaranteed plugs.

Victor Gaskets Confine Power in the Cylinders

Power, confined, is the essence of good motor operation.

There must be perfect compression in the cylinders to direct the full force of the explosion to the driving parts. Power must not escape until it has done its work.

Victor copper-asbestos cylinder head gaskets do hold compression. They resist the enormous pressure caused by each explosion in the cylinder. They do prevent the escape of power.

Thousands of dealers and jobbers have proved the worth of Victor Gaskets through long experience. They know that these gaskets last longer on all types of motors.

The extent of our line, with more than 300 types of cylinder head gaskets and more than 4,000 other types, offers a complete stock to supply from.

KEEPS THE "BUMPS" BELOW THIS LINE

No. 701—Made of ¾-in. steel rods. Malleable threaded clamps. Weight 12 lbs.

No. 702—Made of 1-in. x 1-in. x 3-16 in. Angle iron. Weight 8 lbs.

No. 703—Made of 1-in. x 1-in. x ⅛ in. Angle iron. Jointed arms. Weight 5 lbs.

No. 733—Made of 1-in. x 1-in. x 1-8 in. Angle iron. All one piece. Weight 5 lbs.

No. 704—Made of ¾-in. tubing. Malleable threaded clamp. Weight 5 lbs.

Walker Auxiliary Radius Rods for Fords

Patented *Patented*

An absolute Ford necessity. Every Ford owner a potential customer. A big, broad, profitable market in every section of the motoring world. Stocked by most jobbers. If yours won't supply you, write us direct. Beware of infringements. Be sure you get Walker patented rods. Walker Radius Rods give regular Ford Radius Rod the necessary support. Securely brace front axle—keep it straight—eliminate danger of bending and breakage of regular rod. Attached immediately. No holes to bore. Clamp to rear of regular rod—fasten to axle—employing regular Ford perch bolt—with exception of 701, which clamps to front axle. Stock up. A quick turn over—splendid margin of profit—small investment

$7.50 Per Set of Four

Walker Steel-Bilt Shock absorbers—actually **absorb**—all shock—all vibration of rough, vicious roads. They establish a solid comfort line which puts Ford Motoring on a far more pleasureable and economical basis. They safeguard the car—keep jars and jolts from injuring mechanism and give occupants the limit of riding ease.

WALKER STEELBILT SHOCK ABSORBERS FOR FORDS

Are made entirely of steel. Not **make shifts.** Absolutely unbreakable. No wear out to them. Never lose their wonderful elasticity—their shock absorbing quality. Spiral spring, extra long and extra strong—oil tempered. Spring bolts turned from cold-rolled steel and scientifically hardened. Equipped with convenient oilers. No squeaks. No stiff, jerky action. A slow, even billowy recoil the like of which you have never experienced in any other style spring. No sliding parts. No breakage—or mishaps. Steel-strong in every part. Endure for the life of your Ford and increase your **car** endurance through abolishment of wear and tear occasioned by road vibration.

Extremely economical—only $7.50 per set of four. Pay for themselves many times over in saving of repair costs.

All complete. Ready for immediate installation. No holes to bore. No special tools needed. No bother at all. Guaranteed to give most satisfactory service. Thousands in use. No Ford complete without a set. Gigantic demand. An exceptionally attractive proposition to dealers. **Write for it.**

PEERLESS
AUTOMOBILE SPECIALTIES

MAKE OLD CARS LOOK LIKE NEW

These specialties are made from highest grade raw materials. They add to the appearance of the car and the greater durability of these products more than pays for any possible extra cost over ordinary dressings, paints and varnishes.

QUALITY PRODUCTS ARE:

Peerless Mohair Top Dressing

A waterproof dressing which also dyes the top with one application.

Peerless Cushion Dressing

Brightens and renews the finish of leather seats and cushions.

Peerless Lamp Enamel—Gloss and Dull

A rich enamel finish for lamps and kindred parts. Gloss and Dull.

Peerless Rim Paint—Anti-Rust

A coating which prevents rusting of rims, which is injurious to casings.

Peerless Liquid Wax

A wax polish in liquid form which is easy to apply with a light, even coat which will stand washing without dulling the finish.

Peerless Mirroroid

A clear varnish. If applied before the paint and enamel have perished will make a finish like a newly varnished job.

Peerless Ford Top Dressing

Made especially for material used in Ford Cars and will renew and brighten the finish on same.

Peerless Fender Japan—Jet Black

An air drying enamel which gives a rich finish similar to a baked job.

Peerless Gasket Shellac

A high grade alcohol product. Heavy bodied and goes in tack quickly. For use on all kinds of gaskets, whether copper, asbestos, felt or paper.

Peerless Auto Body Polish

A fine product for dull varnished surfaces. It brightens with a finish that is lasting.

Peerless Leather Top Dressing

Renews and softens leather, rubber and pantasote tops—adds months of life to tops.

Peerless Lining Dye

Makes all water-stained, grease-spotted and faded linings a dark, uniform color.

Peerless Battery Box Black—Acid Proof

An acid resisting enamel for coating wood and metal that comes in contact with acid and fumes from battery boxes.

Peerless Cylinder Enamel—Black and Gray

Heavy bodied enamels that will resist heat, grease and gasoline. Black or Gray.

Peerless Tire Paint—White, Black or Gray

A waterproof dressing that protects and improves the appearance of your tires. Made in black, gray and white.

Peerless Touch-Up Black

A quick drying product for touching up various parts of wood or metal.

Peerless Carbon Remover

A liquid preparation which will remove deposits of carbon from cylinders and always keep the motor active and full of life.

Peerless Black Japan—Extra Fine

A fine gloss black product for all around use on wood, metal or old enameled parts.

Peerless Color Finishings

Made so that you can paint the wheels, body and chassis of your car your favorite color. Made with a finishing varnish to stand wear and may be used without an undercoat (except the lighter shades). Dries over night. Made in Red, Blue, Green, Yellow, Gray, Straw Color, Black and White.

It does not take an expert to apply **Peerless Automobile Specialties.** Any one can do it by following simple, yet complete directions on each can and first-class results are invariably obtained where **Peerless Specialties** are used. There is a Peerless Product for each part of the car that needs toning-up—body, wheels, fenders and tops. And when finished the car will have a finish that anyone will be proud of.

The quality is so fine that they are used and endorsed by over 8000 of the Leading Automobile Painters.

Dealers and Jobbers

Order these Products today, so that you will have complete stocks from which to fill your orders. Dealers and garages get catalogs, window display material, inserts and other advertising matter from jobbers stock or direct from us if they cannot supply you.

AN APRON THAT'S REALLY ACID PROOF

Our chemists solved a great problem when they produced "Invincible" acid-proof fabric—not only 100% acid proof, but pliable and wear proof.

INVINCIBLE ACID APRON

Used by the largest factories in America in acid, pickling and nickel plating departments. Has withstood the most severe tests.

Furnished complete with neck tape and adjustable chain fastener for waist and in various sizes to suit your needs.

Send Coupon for sample and full information.

IBSCO AUTOMATIC BATTERY STEAMER AND STILL

A necessity in every battery station.

IBSCO Steamers and Stills are all made of spun aluminum. No seams; only aluminum and brass come in contact with water. One cell or all can be removed in from three to five minutes. Water is distilled at the rate of about a gallon an hour.

No. 1 IBSCO Steamer and Still has automatic valve. Just attach to city water and turn on. The valve does the rest.

No. 5 IBSCO hasn't the automatic valve. Must be filled by hand. Outside glass gauge shows water level at all times.

Any kind of heating plant or gas burner will operate an IBSCO.

LUCK or PLUCK?

No man ever got anywhere standing at his shop door with his fingers crossed—waiting for his luck to change.

The Automotive Repairman who gets all that's coming to him—whose shop is busy all the time—whose bank account is growing bigger every day, is a man who doesn't trust to luck—he goes after business with both feet and he gets it.

He has learned that there is no class of work which pays him the margin of profit that is produced by re-boring gas engine cylinders. It is easy work to get—it is easy to handle and it keeps up the efficiency of the shop.

Get Busy! Go After Business Hard!

Things are just beginning to open—automobiling will soon be in full swing—the trucks are working overtime—the hum of the tractor is starting on the farm—the motorcycles are beginning to fly around and the gas engines are churning away.

More gas engine cylinders will need re-boring this year than ever before. Get your share of this business. Install a Marvel Cylinder Re-Boring Machine and be in position to handle it promptly, satisfactorily and profitably.

Marvel Cylinder Re-Boring Machine Is Supreme

It is power driven—automatic—accurate—reliable and speedy. It handles any gas engine cylinder from a motorcycle to a tractor in jig time. It doubles the man power of your shop and has been endorsed and is being used by over one thousand Schools, Colleges and Automotive Repairmen.

The experience of a man who has spent years in machine shops—who has come in personal contact with nearly every make of machine should mean much to you. Just read what H. L. Kutscher of Springfield, Ill., wrote to Miller-Van Horn Co. of Columbus, Ohio.

"We are in receipt of your letter of the 20th regarding the Marvel Cylinder Re-Boring Machine and we are pleased to state that the quality of the work turned out by this machine is excellent. The writer considers himself a competent judge of re-boring machines, as he served his apprenticeship as a machinist in the railroad shops, where he came in contact with numerous machines and for 15 years he has been working with and studying machines of all kinds.

The Marvel Cylinder Re-Boring Machine is Nearer Perfect Than Any Other Machine and Its Efficiency is Wonderful

MARCO PISTON SERVICE

The Sign of a Perfect Piston

Upon numerous occasions we have had cylinder blocks sent us from different parts of the country stating that "these cylinders are to be RE-BORED and NOT RE-GROUND" and when they were done the finish was so perfect that a question arose as to whether they had been re-bored or re-ground. The answer was the short space of time it took to re-bore.

We can re-bore a Ford cylinder block in from one hour to one hour and thirty minutes and do a perfect job.

For the above reasons we recommend the MARVEL CYLINDER RE-BORING MACHINE for any re-boring that is to be done.

Sincerely Yours,

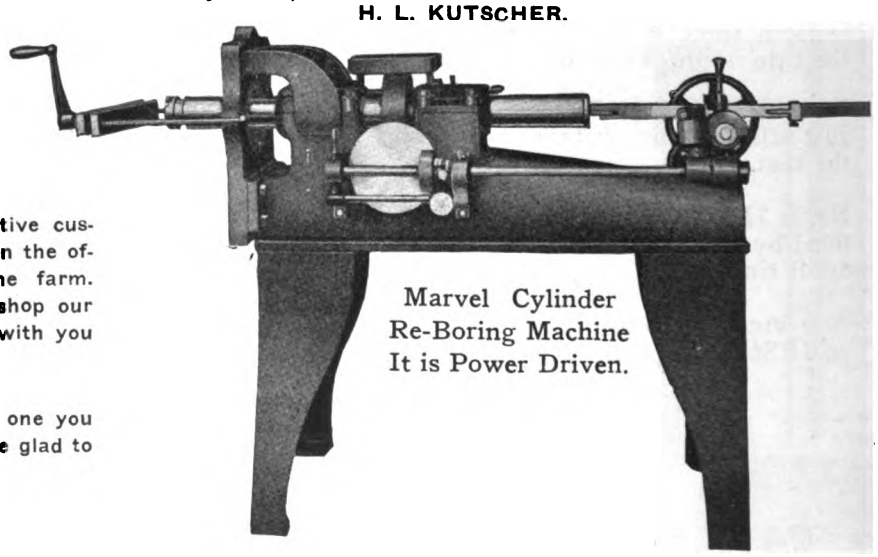
H. L. KUTSCHER.

MARCO PISTON SERVICE

The Sign of a Perfect Piston

With such unsolicited evidence as a guide you cannot go wrong with a MARVEL. And back of each MARVEL—back of your shop we put the most complete Business-Building Service ever originated. Our Co-Operative Advertising and Sales Campaign helps bring customers to your shop. Prospective customers are approached from all angles—in the office—the home—on the street or on the farm. When a MARVEL is installed in your shop our work for you has only begun—we work with you and for you to make it a Big success.

Our proposition is the most unusual one you ever heard of. Get it at once. We will be glad to go into the matter fully with you.



Marvel Cylinder Re-Boring Machine It is Power Driven.

The ACCESSORY and GARAGE JOURNAL

VOL. IX. PAWTUCKET, R. I., APRIL, 1920 No. 12

General Review of Manufacturing and Trade Conditions

Production Schedule for March in All Branches of Industry Beats Previous Monthly Records in Spite of Obstacles Affecting Supplies and Deliveries.

THOUGH predictions for the prosperity and progress of the automotive industry of the country for 1920, made at the opening of the present season, may have seemed sufficiently, if not superlatively, sanguine to conservative thinkers, the record for the first three months of the year shows that production is adhering so closely to schedule as to prove that the prophets of optimism should be acclaimed as having been imbued with the real inspiration of truth, judging, at least, by the present status of affairs.

At the beginning of 1920 it was estimated that the unsupplied demand for automobiles in this country was 2,000,000. During the first quarter approximately 500,000 cars have been produced. The prediction was that during the year 2,250,000 cars would be manufactured, and this will prove true unless some unforeseen difficulty still more serious than those experienced in the past quarter retards production. Early in the year the coal strike and the influenza proved serious handicaps, and this was reflected in the fact that the production for February was about 20 per cent. lower than for January.

The output for March, however, has again increased, showing that the industry has once more struck the 2,000,000 gait, at which rate it is at present travelling. Statistics from nearly all the large automobile producing centers demonstrate that the favorable records for the preceding two months were virtually eclipsed by the volume of increase for March, and this condition has been reflected by the amount of business reported to have been transacted in the big sales centers.

In the Detroit district, the acknowledged hub of America's automobile manufacturing industry, March was the greatest month for motor car production ever known. The total number of passenger cars turned out was 176,831 and, while specific figures on truck production are not available, it is stated that this branch of the industry showed a correspondingly large increase over any previous month. And this augmentation was effected in the face of a number of deterrent elements, such as shortage of freight equipment due to tie-ups from railway operative strikes, and other transportation difficulties which affected the delivery of materials, parts, etc., and the high price and scarcity of labor.

The Ford Motor Co. had an extraordinary month, turning out 80,008 passenger cars and 14,291 trucks, a total of 94,299. At the Overland Toledo factory a schedule of 600 cars a day was maintained for the 27 working days of the month. Here production was handicapped, as at all other plants, by the lack of freight cars, but the labor situation has eased up and the extra effort put forth by factory executives stimulated employees in all departments and increased the output materially. Overland plans to reach a maximum of 800 cars a day probably by the first of June.

A 20 Per Cent. Increase.

At the Hudson plant it was stated that production in March was 20 per cent in advance of any month in its history, and the same was true at the Cadillac, Dodge, Paige, Columbia, Hupp, Liberty and Maxwell factories as well as in a majority of the important plants outside Detroit. Factories out in the state were reported to be in a better situation than those in the city proper, in so far as the supply of parts and materials was concerned, but they were handicapped greatly by lack of freight cars to move the finished product, and were compelled to drive away most of their cars and to store the remainder.

At the Packard plant 815 cars and an equal number of trucks were built during March, and plans for April call for a 25 per cent increase.

The Studebaker factory in Detroit, while exceeding all previous schedules, was just up to 5000, the number outlined as its probable production. Studebaker experienced a difficulty in obtaining parts, but this has been somewhat obviated and it will probably greatly exceed the March output the present month.

The Jackson Motors Corporation was able to secure but one freight car a day on an average, and was compelled to store the greater part of its product at the State Fair grounds. Incoming freight conditions were, however, better than during the previous month, and the company was not handicapped by lack of parts.

The Briscoe Co. has had no freight cars for several weeks, but has been getting parts in good quantity. Officials of the company said that, while March was extraordinary from a production standpoint, it could hardly be said to be the greatest in the company's history. Plans for April, however, contemplate a big increase over March unless the freight strike forces a tie-up.

With the new cars soon to be in production in Detroit and all manufacturers aroused to their keenest efforts by insistent demand, the scheduled output will probably exceed the announced total.

The production schedules outlined by the various companies for the year are being adhered to quite closely. Ford was listed to make 1,000,000 in 1920 and turned out, during January, 96,000; dur-

Digitized by Google

ing February, 77,000; and during March, approximately 100,000.

The Buick Motor Co. scheduled 200,000 for the year and made in January and February, respectively, 15,000 and 14,000 cars. The Overland output for 1920 was listed also at 200,000, and 13,000 cars were made in January and 16,000 in February.

Other large schedules for 1920 were as follows: Chevrolet, 120,000; Dodge, 120,000; Oakland, 100,000; Maxwell, 80,000; Studebaker, 80,000; Willys-Knight, 80,000; Oldsmobile, 80,000.

Where Competition Will Be First Felt.

In spite of this greatly augmented output, sales competition is sure to be felt, and this will probably first manifest itself in cars in the class costing from $3000 to $4000. The demand for lower priced cars is so great at the present time that it will probably keep up for a considerable time after the active demand for the higher priced product has been met. Ford alone is 235,000 cars behind orders, and at the present rate of 3000 a day this is approximately three months' production, and this does not include the requirements of hundreds of dealers who, realizing the difficulty of securing deliveries, are holding off and in the meantime are either buying used cars or holding on to cars that would ordinarily have been turned in.

Shipments for March.

The tremendously increased production of automobiles, in spite of unprecedented transportation difficulties, was reported at a late meeting of the directors of the National Automobile Chamber of Commerce in New York City. It was shown that the shipments for March would approximate 28,000 carloads, compared with 23,744 carloads in March, 1919, while more than 46,000 cars, or an additional 13,000 carloads, were driven away from the factories the past month.

Shipments for January and February of this year totalled 46,812 carloads, compared with 36,191 in the same period last year. It should be noted that the plan of drive-aways from factories has now, of necessity, become an important factor in partially solving the problem of deliveries. In the first two months of 1920 the drive-aways from factories numbered 57,482 machines, or 16,500 freight carloads. One Ohio manufacturer reports that 600 cars were driven away in one day from his factory last month, while one in Detroit made a drive-away of 500 in one day.

Reports received from the representatives of the traffic division of the National Automobile Chamber of Commerce indicate a slight increase in the supply of freight cars for the automotive industry. The situation is still very serious, however, and constitutes the greatest present handicap to manufacturers. Orders for supplies are accepted more readily, but the difficulty is in getting them delivered. Some manufacturers are using coal cars for the shipment of automobiles. They have designed special cranes for hoisting them into the gondolas and cover them with tarpaulins for protection from the weather.

At present rate of production, motor cars manufactured in America in 1920 will reach 2,250,000 mark predicted by most sanguine promoters of automotive industry at opening of season. Over 500,000 cars have already been turned out in first quarter of year and the usual high production months are still to come.

Total production of passenger cars for March is 176,831 in Detroit alone, and trucks show a corresponding increase—beating all previous months in the history of the industry, at the same time overcoming difficulties in transportation, labor troubles and shortage in materials.

Outlook for future is optimistic—labor situation is easier. Although wages are high, both skilled and unskilled workers are more plentiful. Lack of housing facilities in big manufacturing centers and poor transportation accommodations for workmen are deterrent factors.

Materials, though high in price, are not so scarce, and manufacturing conditions generally are improving.

Shortage in freight cars is somewhat relieved and probable end of tie-up is in sight.

Somewhat better conditions are expected in April, for March is always considered one of the worst months of the year for deliveries, and this year it has been particularly difficult because the rate of production has been very high and the highways generally were in such bad condition that they could not be used as an adjunct to the railroads. This condition has put an added emphasis on the importance of keeping the roads open for traffic the year round.

The Motor Truck Situation.

Reports made to the National Automobile Chamber of Commerce by members of the motor truck committee are reassuring in that they indicate that the commercial car branch of the industry is in excellent shape, and progress in production and shipments are very satisfactory when considered in the light of existing conditions.

Outlook Bright for Trailers.

The Trailer Manufacturers' Association states that as many trailers were manufactured and sold during the first three months this year as for the whole of 1919, and this production would have been still greater if the manufacturers could have secured deliveries of parts and materials; also if they had been able to obtain better facilities for shipping of the finished trailers. The demand has increased satisfactorily during the last six months and a steadily augmenting volume of business is confidently anticipated by the manufacturers.

The factories are reported to be behind on their orders from four to six weeks and, in some cases, have unfulfilled orders on the books to the value of $200,000 to $300,000, which are held up because of the inability to secure deliveries of axles, springs, bearings, castings, forgings, and even bolts and other small hardware. Severe winter storms, freight embargoes and the recent railroad strike have prevented or greatly interfered with shipments of finished trailers during the winter and early spring. Despite these handicaps, however, shipments have increased each month and, as conditions approach normal again, the production will rise proportionately.

Manufacturers are well satisfied with the sale situation, as if orders had come in more freely, they could not have been filled under the conditions that have prevailed. Buying has been distributed all over the country as well as extended to foreign countries.

Parts Situation Improved.

At the present time there seems to be more difficulty in getting the cars out of the factories than there is in getting parts into them. The steel situation has become noticeably less acute and there are fewer instances of concerns being held up for important parts, although the situation is by no means entirely clear, as there are still cases reported where manufacturers have been hampered by the inability of securing certain necessary units.

Labor Is More Plentiful.

The labor situation is reported as being easier. While wages are high, workers are plentiful and there is no shortage of skilled or experienced men. The acute housing conditions around the factory districts are, however, detrimental to a full production schedule. It is estimated that in Detroit alone there are 35,000 families not supplied with proper dwellings, and to aggravate this situation, the system of municipal transportation is now affording very poor service and makes it difficult for the laborers to get to and from work. This is a disturbing element which has its effect upon production, but which will not, however, materially curtail the total results.

Increase in Prices.

One outstanding feature of the automobile industry the present season is the general increase of prices for cars which would ordinarily be expected to cut down the demand, but has had no effect at the present time. A general upward revision has been made by more than 50 prominent manufacturers.

The majority of makers have made a flat increase applying proportionately to all models. Such, for instance, are the Chalmers, which has been advanced $150

Digitized by Google

on enclosed as well as open types; the Chevrolet, $60 on all models in both its 490 and F. B. lines; the Cole, $200; Dodge, $100; Lexington, $300; and Mercer, $450 on all models, respectively.

The average increase is around $200. On touring models alone, the rise has been approximately eight per cent or, in round figures, $160. Closed models have advanced more proportionately, in some instances, owing largely to the difficulty in getting supplies, but also, in part, because of the unprecedented demand for this style of car.

This is typified in the Buick, which shows an advance of $80 on the K-49 touring, $100 on the K-44 roadster and K-45 touring models, $150 on the K-6 coupe, $200 on the K-50 sedan and $210 on the K-47 sedan. The H. H. Franklin Co. also has raised its price $100 on five-passenger touring cars and two and four-passenger roadsters, while on the broughams and sedans the increase has been $200.

The Liberty car shows increases of $100 on touring car, roadster, speedster, brougham and landaulet-brougham, $130 on coupe and $186 on sedan. The Moon Motor Car Co. has put into effect prices showing a flat increase of $200 on all models of its 6-48 line and of $400 on the 6-68.

The smallest advance noted is on the Willys-Overland, $40, on all models, while the Mercer shows the biggest flat increases, $450 on each type.

The general increase in prices for the most part went into effect March 1, at which time it was predicted in some quarters that this would be followed by another rise in June, as it was stated that since the first advance there has nothing developed to counteract the increase. The added cost of labor and the jump in overhead expense is held to be largely responsible for the increase. The fact that cars have had to be driven away in percentages which range all the way from 25 to 65 is also a factor. It has likewise cost more to get materials to the plants. In a great number of instances express shipments have had to be made on parts that would ordinarily come by freight. Taken by itself no one of the items is very large, but when the total amount is considered it becomes well-nigh apalling.

Advance in Tire Prices.

The recent general advance of approximately 20 per cent in automobile tire prices is another item which means much to the car maker. The increased cost of a set of four tires ranges from about $10 a car where 30 by 3½-inch shoes are used, to $30 or $40 a car for the larger sizes. Nor should the fact that nearly all materials, parts, etc., have been augmented in price be overlooked.

Upward Tendency Thought to Have Reached the Peak.

In a general way it is thought, however, that the repricing movement has reached the peak. In the first place, a majority of the more important lines have now been adjusted. Again, prices which are not advanced within the next 30 days are likely to remain intact through the balance of what is known as the manufacturing season, barring unforeseen contingencies. With the active driving season coming on and the market still short of cars, dealers who are able to make deliveries on new sales would be, in many cases, seriously embarrassed by an upward price movement coming after most of the manufacturers were all set for the summer run of trade.

There will also be a tendency for price reduction when the competitive market is reached, and it may be possible that this will have its effect on labor, due to the pressure exerted on manufacturers by dealers who will then become more insistent on closer prices, and wages might be in some degree reduced, although it is not to be expected that any material reduction will take place for a long time.

There is also to be considered the fact that another 60 or 90 days will see the beginning of the announcement of the 1921 models, in connection with which price adjustments will be readily and almost automatically accomplished, for, with the models coming in, higher prices for the old will be proportionately more difficult to maintain.

Automotive Industry an Illustration.

The unprecedented progress in the automotive industry furnishes an apt illustration of the truth that the limits to industrial development constantly recede as the industry itself advances. Industrial leaders, in the early part of the 19th century, talked about the limits to this, that and the other industry, but the growth they observed was as nothing compared with subsequent developments.

Methods of manufacture changed, unadaptable equipment was discarded again and again, but the industries themselves continued to develop and multiply every year that the wise observers predicted that the limit of that development had been reached.

Thus it will be seen that no one can as yet set any bounds to the automotive industry and, on this basis, manufacturers can go on, without fear for the future, making improvements in design and perfecting old and setting new standards in order to best adapt their products to meet the constantly changing conditions and variations in the market.

The general increase in prices of cars has caused no falling off in demand. Average advance is about $200 on some 50 leading lines. Touring cars alone have gone up about eight per cent since Jan. 1. Advance in cost of labor, materials and equipment the principal causes, while transportation difficulties, necessitating a large percentage of drive-aways, has also contributed.

Although a further increase in car prices is predicted in some quarters, it is more generally believed that the peak has been reached, with the manufacturing season well under way and the time for the appearance of 1921 models approaching, when prices will be readily and almost automatically adjusted for the following season.

While the supply of lower priced cars cannot possibly meet the demand for months to come, the competitive period on the more expensive lines will undoubtedly be reached earlier, as manufacturers have more nearly kept pace with orders, and this competition will probably first be felt by dealers in cars of the $3000 to $4000 class.

SERVICE MANAGERS' CONVENTION AT INDIANAPOLIS.

As its first important function the newly created service division of the National Automobile Chamber of Commerce will hold a convention at Indianapolis, May 24 to 26. In most professions or vocations there is a fairly definite understanding as to what the patron may expect from the party supplying the service or commodity, and vice versa, but this is not universally true of automobile and motor truck service, chiefly because these industries are still in their youth and have been absorbed in more imminent problems. It will be the effort at this convention to consider how best to bring about a more universally accepted conception of just what are the responsibilities and privileges of all parties concerned.

The programme as laid out will treat of the service situation first outside of the service department and then inside. Following are the topics more in detail:

"The Salesman's Functions in and Attitude Toward Service from the Sales Point of View," "The Same from the Service Department's Standpoint," "The Owner's Viewpoint as to His Responsibility and What He Expects in the Way of Service," "The Same as the Service Department Sees It." This group of papers from without the service department will occupy the first day and on the second there will be considered the internal affairs of the service department, under the following heads:

"Method of Estimating and Charging for Service on a Flat Rate Basis," "Repair Shop Efficiency Methods," "Stock Room Efficiency Methods," "Service Salesmanship."

The third day of meeting will be devoted to visits to local plants to study layout and conduct of service departments.

Shortage in Oils and Gasoline Threatened

ALL of the oil and gasoline consuming industries in the United States, including automobile manufacturers and users, as well as railroad and steamship lines, are threatened with a serious shortage, unless prompt measures are taken to obviate the preemption by other nations of oil fields in foreign countries, particularly to halt the confiscatory legislation and decrees of the Mexican government aimed at American owned and operated companies in that country. Another element which enters into the situation is the continual export in immense quantities to foreign countries of mineral oils produced in American fields.

The latest figures on the world's oil supply, compiled by the United States Geological survey of the Department of the Interior, show that foreign countries are using only half as much petroleum as the United States, but have seven times as much oil left in the ground. These countries are now using about 200,000,000 barrels of oil yearly, but they have resources large enough to last more than 250 years at this rate of consumption. In striking contrast are the production figures for the United States which, at the present rate of more than 400,000,000 barrels a year, has only an 18-year supply. In other words, the United States is using up its own oil supply 14 times as fast as the rest of the world.

"Not counting all oil to be obtained from shales and other recoverable materials by distillation," the report from the Geological Survey states, "recoverable petroleum amounts to as much as 60,000,000,000 barrels. Of this amount 45,000,000,000 barrels may be regarded as oil more or less definitely 'in sight' as shown by actual drilling with successful results. The remainder covers the available oil which it is believed will be found in other regions in which oil seaps, asphalt deposits or favorable geological conditions point to oil, although no producing wells have yet been drilled. Of this great amount, which is 13 times the oil already taken from the ground in America and about nine times all the petroleum yet produced in the world, 7,000,000,000 barrels only, in round numbers, are believed to be left in the United States and Alaska, the remaining 53,000,000,000 being in foreign countries.

The United States Bureau of Mines has also just issued a warning of the probability of an actual shortage of gasoline before the end of the summer as a result of the disproportionate increase in gasoline production and the number of automobiles in use. With the number of automobiles and trucks now in use, estimated to be 25 per cent. greater than last year, it is stated that gasoline production increased only 11 per cent. in February and 20 per cent. in March.

Exports Far Exceed Imports.

In regard to the factor of exports and imports, the accompanying tables, compiled from the monthly summary of the foreign commerce of the United States, issued by the United States Department of Commerce, shows the exports and imports of crude and refined mineral oils both for the month of February, 1919 and 1920, and also for the eight months ending in February for the past two years.

It will be noted that the total exports of mineral oils exceed the imports for the periods named as follows: February, 1919, 3,448.521 gallons; 1920, 8,880,566 gallons. Eight months ending February, 1919, 497.927,265 gallons; 1920, 74,187,802 gallons. A comparison of these excess exports shows that while the excess for February, 1920, over February, 1919, increased 5,432,045 gallons, the excess for the eight month periods was 423,734,463 gallons less in 1920 than what it was in 1919.

It should be borne in mind in making these comparisons, however that the export figures for fuel and gas oil do not include fuel or bunker oil laden on vessels engaged in the foreign trade, as indicated by the foot note in the export table.

A glance at the import table will also show that imports of crude oil from other countries than Mexico were comparatively negligible and that the great bulk of imports to this country in the periods cited came from that country.

Chairman Payne of the United States Shipping board, in a recent letter to President Wilson and Former Secretary of State Lansing, warned them that unless the confiscatory programme of the Mexican government with respect to American owned oil properties was halted, the operation of the American merchant marine would be seriously embarrassed. He pointed out that the United States depended on the Mexican supply to the extent of 40,000,000 barrels for the bunkering of the emergency fleet for the period ending April, 1921.

The effect upon the United States and its industries of any interference with the production and import into the United States of Mexican petroleum is further shown when it is considered that while American produced oil now supplies the major portion of the gasoline and kerosene, as well as all the lubricants used in this country, over 90 per cent. of all the fuel oil used on the Atlantic and Gulf coasts, both for bunkering ships and for industrial purposes, is derived from Mexico, and is being used at the present time at the rate of about 60,000,000 barrels a year (increased from 38,000,000 barrels in 1918).

And unless the rate of production of American petroleum can be greatly increased, which seems doubtful considered in the light of government reports quoted above, America must rely for its increased uses of gasoline on importations, as well as for all increases in the use of fuel oil.

Personal News of the Industry in Brief

Quinlivan with Bailey-Drake Co.

H. E. Quinlivan, formerly with the Splitdorf Electrical Co., is the new New York and New England states representative of the Bailey-Drake Co., Chicago, Ill., the well known distributor of automotive products. Mr. Quinlavan has had a successful experience in connection with the sale of electrical and general automotive accessories and his new appointment gives him a broad field of representation for the standard products distributed by the Bailey-Drake Co. This concern was established in San Francisco in 1908, but its rapid growth rendered necessary a general headquarters more centrally located, so these were established at Chicago. Its activities now cover the entire United States and Canada, and large branches have been established in New York City, Detroit, Atlanta, Ga.; Dallas, Tex.; Kansas City, Mo.; Minneapolis, Minn.; Seattle, Wash., and San Francisco.

Russell L. Engs, metropolitan distributor for Cole motor cars, has purchased the property at 1845-1847 Broadway, New York City, adjoining the northwest corner of 60th street. This building is now under lease to the Colt-Stratton Co., distributor for Dodge Brothers cars, and to the Auto Dealers' club. The structure has a somewhat noteworthy reputation as a restaurant headquarters, housing as it did the initial venture of George Rector, and having also been occupied by Louis Martin and Bustanoby. The property was held at $400,000.

Fred D. Newland is president of the firm of Davis, Newland & Wilson, Inc., Buffalo, N. Y., which represents the American Six line in that territory. Mr. Newland was connected with the Studebaker Corporation when that concern started to make automobiles, and later became assistant sales manager of the Lion Motor Co., Adrian, Mich. He more recently became interested in an agency at Buffalo for Paige cars. The treasurer of Davis, Newland & Wilson, Inc., is George W. Davis.

George S. Waite, sales director of the Grant Motor Car Corporation, Cleveland, O., is on a tour of cities west of the Mississippi river and will remain in that section for about two months. Before leaving the factory Mr. Waite announced that his company would take no more foreign orders for the Grant Light Six car for the present on account of the difficulty in filling domestic orders. However, orders for export, already booked, will be filled.

F. L. Waite, for seven years advertising manager with the Reo Motor Car Co., Lansing, Mich., has announced his resignation. His future plans are not yet announced, but it is understood that he will not leave the automotive industry.

A. L. Lockwood, president of the Lockwood-Ash Co., Jackson, Mich., manufacturer of Sterling spark plugs and marine engines, has returned from a business tour through the South.

H. E. Quinlivan, New York and New England States Representative Bailey-Drake Co.

R. H. Losey, head of the Losey-Nash Co., Indianapolis, Ind., has taken over the distribution of the new LaFayette car in the State of Indiana, which will be handled through a separate organization, the Losey-LaFayette Motor Co., of which Mr. Losey is president and general manager. Three floors of the building at 408 North Capitol boulevard will be remodeled as headquarters for this new interest.

Harold S. Pierce, formerly engineer in charge of chain drive layouts on automobile work with the Linkbelt Co., Philadelphia, has become chief engineer of that concern, and William H. Bond will assist him in handling motor drive work. Harry Reiser, for many years in the engineering department, a portion of the time as production manager, has been made sales engineer, acting also as customer's representative at the factory.

James M. Fitzgerald has become Cleveland distributor for the new Lincoln car, made by the Lincoln Motor Co., Detroit. Mr. Fitzgerald entered the automobile trade 15 years ago with the White Co. and later, up to last March, had charge of Cadillac sales in Cleveland. He has organized the James M. Fitzgerald Co., with temporary offices in the C. A. C. building.

F. E. McKone has succeeded Herbert Chase as assistant secretary of the Society of Automotive Engineers. Mr. McKone has been at the headquarters of the society since last September. He was formerly with the Todd Dry Dock & Construction Co., Tacoma, Wash. Mr. Chase has joined the Power Plants Corporation, Washington, D. C., which is engaged in the development of engines for automobiles and other uses, capable of burning low-grade fuels.

Cooper is Manager Keystone Truck

M. S. Cooper has severed his connection with the sales department of Willys-Overland, Inc., Toledo, O., to become sales manager of the Keystone Motor Truck Corporation, Chestnut and 42nd streets, Philadelphia, which concern is to make a new one-ton truck to be known as the Keystone. Mr. Cooper has been with the Willys-Overland Co. for the past six years continuously, with the exception of 14 months spent in France, when he was commissioned a major in the Motor Transport Corps, United States army. While with the Willys company he was in charge of the commercial car division of the sales department and more recently was handling quantity sales.

Myles B. Lambert, for many years actively connected with the Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa., has been appointed manager of the railway department of that company. Mr. Lambert joined the Westinghouse forces in 1901 in the railway department, being assistant to the manager before his recent promotion. His earlier business experience was with the Long Island railroad, then operated by steam, and he subsequently entered the employment of King's County Elevated railroad, Brooklyn, later becoming division superintendent.

John A. Randolph of the Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa., recently died from pneumonia at the Columbia hospital, Wilkinsburg, Pa. He was graduated from Syracuse university in 1903 and was engaged in engineering and writing technical literature for trade magazines. He was also for a time interested in the activities of the Society for Electrical Development, New York City.

L. R. Remington, manager of the Philadelphia branch of the Bearings Service Co., has been transferred to Chicago, where he will serve in a similar capacity. J. A. Barnett, who has been assistant branch manager at Philadelphia, succeeds Mr. Remington in that city, and F. C. Fuller of the Detroit branch has been appointed manager of the Cleveland office.

Robert H. Salmons, vice president of the Selden Truck Corporation, Rochester, N. Y., in charge of foreign business, has sailed for an extensive trip to the West Indies, to include Cuba, Haiti, Santo Domingo, Porto Rico and Jamaica.

Thomas P. C. Forbes, formerly with the Fulton Motor Truck Co., H. A. Lozier Co. and Monarch Motor Car Co., has taken over the distribution for New York of the Ferris, the new $3500 model car manufactured by the Ohio Motor Vehicle Co., Cleveland, O.

Arthur Curren has taken over all the interests of the Auto Sales & Storage Co., North Liberty street, Independence, Mo.

A. L. Ellis, New Production Manager, Jenkins Vulcan Spring Co.

Ellis with Jenkins Vulcan Spring

A. L. Ellis is the new production manager of the Jenkins Vulcan Spring Co., Richmond, Ind. He was formerly with the spring division of the Detroit Steel Products Co., and his experience in the production of leaf springs extends over a period of 20 years. Mr. Ellis will have full charge of production to meet the demand of more than 8000 Vulcan dealers in all parts of the United States and Canada.

Ed McCullough is president of the McCullough-Davies Co., a new concern recently incorporated at Waco, Tex., which has established headquarters at the corner of Third street and the Square for the distribution through Central Texas of automobile parts manufactured by the General Motors Co. The line will include G. O. tractors, Oliver farm implements, Cape New Model separators and Western Electric Co. farm lighting plants. The McCullough-Davies Co. will also operate a branch at Dallas at 508 Griffith street. Other officials of the concern are Prentiss Davies, vice president and general manager; Leland G. McCullough, secretary and treasurer; W. H. McCullough, member of board of directors.

G. W. Kenney is the manager of the G. W. Kenney Motor Co., which has succeeded the Howard-Spence Co. as distributor at Waco, Tex., and vicinity, of Reo cars and trucks, Studebaker cars and Firestone tires. Mr. Kenney was formerly manager of the F. L. Shaw Co. and was later connected with the Howard-Spence Co., in the same capacity. The new firm will continue in business at the old stand of the Howard-Spence Co., 822 Austin avenue.

Guy Beardsley, a Binghamton, N. Y., newspaper man, has taken the agency for Oakland cars in that city, under the name of the Binghamton Oakland Co., and is located in the new building at 48 Collier street. Mr. Beardsley was allotted 300 Oakland cars for his territory.

Alec J. Mayberry, for many years manager of the United States Rubber Co., Boston branch, and known in the rubber trade throughout New England, died suddenly at his home at Allston, Mass. He was born at Bangor, Me., 49 years ago, and entered the rubber business in the early 90's. From 1900 to 1910 he was with the Tremont Rubber Co., Boston, and after that time was president and treasurer of the Springfield Rubber Co. until his connection with the United States Co.

I. D. Cross, who has been representing, in the western states, the Northwestern Chemical Co., Marietta, O., manufacturer of Norwesco "Chemically Correct" automotive utilities, was recently promoted to the office of western sales supervisor. Mr. Cross is an experienced salesman of automotive equipment and now assumes charge of the entire western field with considerable of a sales organization under his direction.

Walter H. Yeager, formerly located at 682 Beacon street, Boston, has moved into more commodious quarters at 983 Commonwealth avenue, where he will continue to conduct an auto service station. Mr. Yeager specializes on the repair of Cadillac cars and is also the New England distributor for sales and service of Heinze-Springfield starters for Ford cars.

H. K. Dobson, who went to Columbus, O., in 1911, from the management of the Studebaker Boston branch, to join the sales force of the Twyman Motor Car Co., and in 1912 organized the Everitt Auto Sales Co., becoming state distributor of the Everitt car, retains the office of president and general manager of the Dobson Auto Sales Co., 207 North Fourth street, recently incorporated to succeed the Everitt Auto Sales Co. The company is Central Ohio distributor for Maxwell and Chalmers cars.

George G. Norwood, until recently sales manager of the Lambert Automobile Co., Mount Royal and Maryland avenues, Baltimore, Md., distributor of Hudson and Essex cars, has been made manager of that concern. Mr. Norwood associated himself with the Lambert Co. in 1916 as manager of the used car department. He was made sales manager at Baltimore a year ago and now succeeds L. E. Lambert as manager.

C. H. La France of the sales department of the Franklin Automobile Co., Chicago, has been appointed general manager of Franklin Products, Inc., Syracuse, N. Y., which concern is engaged in the manufacture of the Brown rubbing machine, invented by Spencer Brown of the H. H. Franklin Manufacturing Co. This device is designed to supplant hand rubbing on paint jobs.

J. A. Dove, a well known Newport News, Va., druggist, has entered into partnership with M. N. Carter in the automobile business, under the style of Dove-Carter Auto Co. They have the agency for the Patterson Six automobile, and maintain a service station and show room at 29th and Jefferson avenue, that city.

Stevens Heads Goodrich Highway

Major A. G. Stevens, highway transportation expert of the Council of National Defense, has been made head of the highway transport division of the Goodrich Travel and Transport Bureau, Akron, O., of which Raymond Beck is chief. Before entering government service when the United States entered the war, Major Stevens was engaged in railroad tariff compilation, in which work he was considered an authority. Because of his experience he was placed in charge of the section of the finance division of the War Department which issued railroad freight charges. Amounts handled by his department often totalled $30,000,000 a month. After the war Major Stevens was assigned to the Council of National Defense to make a comprehensive survey of highway transportation throughout the country. He compiled data showing the comparison between railway, waterway and highway rates, obtained reports from all agencies interested in motor express development, and gathered accurate figures on operating costs in various sections. In his present work Major Stevens will correlate all available information on highway transportation, make analysis of engineering features of motor trucking and issue bulletins containing a digest of all matters of interest.

Bruce E. Adams has been promoted from the office of secretary and sales manager to the presidency of the Magnetic Motors Corporation, Chicago distributor of Rauch & Lang electrics and Peerless and Stevens-Duryea gasoline cars. Richard S. Griefen was elected vice president and succeeds Mr. Adams as sales manager.

L. M. Corbin, for the past year with the Ohio Auto Sales Co., has joined the sales force of the Stearns Motors Sales Co., 1424-1426 East Main street, Columbus, O., distributor of Stearns and Liberty cars.

M. Tanksley and C. J. Nelson have opened a garage at Cotte, Ark., under the name of Baxter County Motor Co.

Major A. G. Stevens, Head of Highway Transport Division Goodrich Travel Bureau.

Manager Miles Goes Abroad

S. A. Miles, the well known manager of national automobile shows, has sailed for a trip abroad, including England, France and Italy. He will secure first hand information regarding automobile and general foreign trade conditions for the members of the National Automobile Chamber of Commerce, and will represent that organization at the meetings of the Bureau Permanent Interallie des Constructeurs d'Automobiles of which the American body is a member. Consideration will be given at these meetings to the subject of tariffs, brought up at the request of the American manufacturers for a reduction from 45 to 30 per cent. in import duties on automobiles and also to the question of further cooperation in standardization, shows, etc.

Manager Miles of National Shows, Who Is Now Abroad.

Louis Sachs is president of the Enterprise Garage, Inc., which recently opened for business at Virginia avenue and 34th street, Newport News, Va. The Enterprise Garage is agent for Kissel Kar, Stearns-Knight, Grant Six and Maxwell automobiles, and Mack, Paige and Atlas trucks, and is also distributor for U. S. L. batteries and Thermoid and Victor tires. The other officers are E. S. Phillips, vice president and treasurer, and Henry Sachs, secretary.

R. J. W. Hamill, and his son, **George R. Hamill,** have formed the Hamill Motors Co., Inc., at Baltimore, Md., to distribute Briscoe cars and trucks. For 15 years R. J. W. Hamill has been closely identified with the automobile industry in that city and was lately connected with the Monumental Motor Car Co. He has leased, for the new concern, the building which was occupied by the Monumental company at the southeast corner of Maryland and Mount Royal avenues. George R. Hamill is to be secretary and treasurer of the Hamill Motors Co.

James Sweeten, Jr., who was recently appointed distributor of Lincoln motor cars in Philadelphia affords an example of a somewhat unusual career from country store keeper to a motor car merchant of the first rank. In taking on the new Lincoln line Mr. Sweeten will establish a sales and service station which will be one of the largest and best equipped in his territory. His first place of business in Philadelphia was at 37th and Spruce street. In 1912 he moved from his store in Pennsgrove, N. J., and devoted himself entirely to the automobile business. By that time he had built a two-story building at 3430 Chestnut street. Three years ago, operating as the Sweeten Automobile Co., he established at a separate location a used car department known as the Sweeten Used Car Clearing House and leased an additional building for an overhaul department and also acquired a warehouse for storing cars. All of these facilities becoming inadequate for his constantly increasing business, in the fall of 1919 he purchased the Parkway building, at Broad and Cherry streets, and later purchased the Union Transfer building, a four-story structure adjoining his main building, with a four-story service station directly in the rear. Pending the completion of alterations on the Parkway building, his sales department is located at 441-451 North Broad street.

George F. Bauer has been engaged by the National Automobile Chamber of Commerce to be secretary of its foreign trade department to succeed H. R. Cobleigh, who has been made secretary of the new service department which has been established by the chamber for the purpose of bringing about further standardization and better service conditions in automobile plants and in the headquarters of their distributors and dealers. Mr. Bauer has been commercial agent on the staff of the New York office of the Bureau of Foreign and Domestic Commerce, with the tariff question and foreign statistics as his specialties. He will work in cooperation with the foreign trade committee of the chamber, which consists of J. Walter Drake of the Hupp Motor Car Corporation, Detroit; Peter S. Steenstrup, General Motors Co.; H. M. Robins, Dodge Brothers, Detroit; Jay Rathbun, White Motor Co., Cleveland; R. T. Williams, Willys-Overland Co., Toledo; J. P. Robe, Studebaker Corporation, South Bend, Ind., and H. B. Phipps, Hudson Motor Car Co., Detroit.

Jesse E. Smith, Edward M. Kernan and Edward R. Kernan are in charge of the Oakland Agency, 180 West Main street, Waterbury, Conn., and in addition to the show room are to operate a service station on Watertown avenue in the building formerly occupied by the Reo Agency.

Henry L. Bill, who has been in charge of production for the Winton Co., has been elected a vice president of the Saxon Motor Car Corporation and will fulfill similar duties for the latter concern.

W. C. Durant, president of the General Motors Corporation, was recently elected to the directorate of the Lincoln Highway association.

Gilmore Takes Over Mercer Agency

R. J. Gilmore, formerly president of Packard Motor Car Co. of New York, is the head of Gilmore Motors, Inc., of Boston, which recently took over the representation for Mercer cars in New England. Mr. Gilmore is a native of Boston and was graduated from the Lawrence Scientific school at Harvard university in 1909. After leaving college he went to Detroit and entered the Packard factory in the engineering department. He later went into the sales department and became sales manager of the Philadelphia branch. He next joined the New York branch of the Packard Co., soon becoming territorial manager, later being promoted to vice president and assistant general manager and eventually becoming president. Mr. Gilmore was very active among the dealers' associations of

H. G. Root, New President Springfield Employers' Association.

New York and was chairman of the executive committee of the New York Automobile Dealers' Association. When war broke out he was one of the first civilians to become a military aviator, and was in charge of the engineering division of the aviation field at Mineola. In assuming charge of the Mercer interests in New England, Mr. Gilmore is continuing his former associations with Emlen S. Hare, former vice president of the Packard Motor Car Co. of Detroit, who sometime ago accepted the presidency of the Mercer Motors Co. of Trenton, N. J.

J. F. Stacy, the new sales manager of the Buick branch at Buffalo, N. Y., was, prior to his promotion, a traveling representative for that concern. He succeeds Mr. Fletcher, who was recently made manager of the Buffalo Buick branch when former Manager Browning was transferred to another city.

H. G. Root, general manager of the Westcott Motor Car Co., has been chosen president of the Springfield, O., Employers' Association. Mr. Root was president of the Springfield Chamber of Commerce last year.

Digitized by Google

Well Known Officials in Motor Truck Industry

C. L. Costello, New Sales Manager, United States Motor Truck Co., Cincinnati, O.

H. P. Mills, New Credit Manager for the Acason Motor Truck Co., Detroit.

George D. Wilcox, Director of Sales and Advertising, Commerce Motor Car Co.

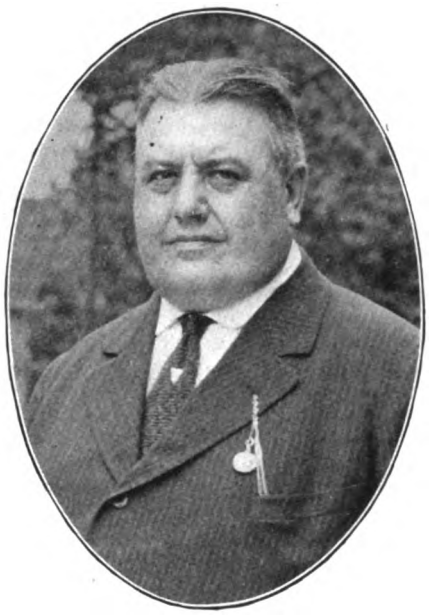
Fisher Promoted by Haynes Co.

Walter H. Fisher, distributor of Haynes cars at Los Angeles, Cal., has had his jurisdiction enlarged to include the entire southern half of the state. This allotment of the additional California counties to Mr. Fisher comes as the result of the retirement of C. H. Haynes, head of the Haynes factory branch in San Francisco. Mr. Fisher will continue to make his headquarters at 917 South Grand avenue, Los Angeles, and his plans include an immediate expansion of his organization to cover the entire lower half of the Golden Gate territory.

Charles A. Tucker, president of the Nebraska Oldsmobile Co. of Omaha, has resigned to become general sales manager of the Olds Motor Works, Lansing, Mich. Mr. Tucker has been engaged in automobile sales work for 20 years and has always been conspicuously successful. During the time he has been an Oldsmobile distributor he has become thoroughly conversant with all the factory's products and policies, and is thus extremely well prepared to undertake his new work.

L. R. Sutherland, for many years connected with the United States Light & Heat Corporation, has joined the sales force of the Burton-Rogers Co., the sales organization for Hoyt electrical instruments. Mr. Sutherland has had a long experience in the storage battery field and will be of great assistance to the Burton-Rogers Co. in developing its service department.

J. E. Forgy, purchasing agent of the Locomobile Co. of America, was elected to the directorate of the National Association of Purchasing Agents at its recent annual meeting in New Haven, Conn., retiring as president of the association.



Forrest J. Alvin, General Manager, United States Motor Truck Co., Cincinnati, O.

T. J. Toner, director of sales for Maxwell and Chalmers cars, announced his resignation following his return from an extended trip to the West coast. Mr. Toner joined the Maxwell forces under Walter E. Flanders in 1910 and, in this decade, it is stated that he developed one of the most remarkable personal followings among automobile dealers of anyone in the industry. Although generally considered an official of the Maxwell organization, it is stated that a large portion of the credit is due him for the return of the Chalmers car into popularity since 1917, at which time he became sales director of the combined lines.

L. W. Darrow and son, Marvin, of Floral avenue, Johnson City, N. Y., are constructing a building at Johnson City Heights to be used as a garage and automobile sales room and repair shop.

Atkin in Charge Exide Western District

Godfrey H. Atkin, who has been manager of the Chicago office of the Electric Storage Battery Co. for 18 years, has been appointed manager of the recently formed western district and will have charge of all departments for the distribution of Exide batteries, etc., in the territory from Indiana to the Rocky mountains and from Canada to the Gulf of Mexico. Mr. Atkin has been connected with the electrical industry in Chicago since 1889, when he joined the staff of the Thomson Houston Electric Co., which was afterwards merged with the General Electric Co. Taliaferro Milton succeeds Mr. Atkin as manager of the Chicago office.

U. Speck, formerly of the firm of Compere & Speck, Waco, Tex., has taken charge of the service department of the Central Motor Co., which specializes on repairs and adjustments on Dodge Brothers cars, that city, at 16th and Jackson streets. Mr. Speck has had wide experience in the automobile business in general and in the rebuilding of used cars in particular. The service and parts department of the Central Motor Co. employs over 20 men and represents a capital investment of more than $100,000.

J. B. Clarkson, Sydney, Australia, wholesale dealer in automobiles, motorcycles, accessories, etc., sailed from Sydney, March 8, on the steamship Megantic and was scheduled to arrive in New York City via the Panama canal about April 10.

F. L. Waite, for seven years advertising manager with the Reo Motor Car Co., Lansing, Mich., has resigned. Although his future plans have not been announced, it is understood that he will remain in the automotive industry.

J. H. Wise, Now Pioneering Latin-American Markets for Selden Truck Corporation.

Wise Touring South for Selden

J. H. Wise is touring South America and the Latin-American countries in the interests of the Selden Truck Corporation, Rochester, N. Y., studying the motor truck situation. He has had 18 years' experience in the sale of automobiles in Mexico, Cuba, Spain and Central and South America. Mr. Wise is working under the direction of Gaston, Williams & Wigmore, a large export house, which company handles the Selden foreign business under the supervision of R. H. Salmons, vice president of the Selden Truck Corporation.

C. W. Butterfield has been appointed sales manager of the Herschell-Spillman Motor Co., North Tonawanda, N. Y. He has, for the past four years, been connected with the Dyneto Electric Corporation, Syracuse, maker of automotive products, as sales and service manager, and was also previously engaged in sales promotion work with the Brown-Lipe Chapin Co., Syracuse, and the J. Walter Thomson Advertising Agency, Detroit. The Herschell-Spillman Motor Co., which is nationally known as a quantity producer of 3½ by five four-cylinder and 3¼ by five six-cylinder passenger car and truck engines, is rapidly expanding its manufacturing and sales facilities.

Dwight T. Hersey has assumed his duties as director of sales of the Jenkins Vulcan Spring Co., Richmond, Ind. He was for many years associated with the Splitdorf Electrical Co. both in the capacity of branch territory representative and more recently in the factory sales department at Newark, N. J.

F. G. Harris, manager of the Buffalo, N. Y., branch of United Motors Service, Inc., has been transferred to New York City, and is succeeded by F. L. Willcox, formerly director of service of the Buffalo branch.

Hugo Gibson has joined Root & Van Dervoort Engineering Co., Moline, Ill.

Fred J. Titus has joined the staff of the Renault American Branch, 719 Fifth avenue, New York City, as sales manager. Mr. Titus is a veteran in the automotive business in this country and has long been identified in a prominent way with the marketing of high grade automobiles. He first entered the bicycle business, having a large establishment on Broadway. His automobile career began in 1903 when he was Harry Haupt's right hand man in introducing and marketing the once famous Thomas Flyer in the New York territory. Later he was special representative, established the business in Canada and was sales manager in New York of the Alco, made by the American Locomotive Co., when that car was enjoying no little popularity among high grade automobiles. Since then he has been identified with the Owen Magnetic, having resigned recently the position of sales manager and secretary.

Albert S. Olssen has been designated by Commissioner Cole of the Masachusetts Public Works commission, as acting chief inspector of the motor vehicle registry division, vice Fred L. Austin, resigned.

George J. Chabot has been made service manager by Frank P. Anthony, Boston distributor of McFarlan cars, who recently moved into new quarters at 685 Beacon street.

C. E. Faulaber, general manager of the Little Rock Motor Car Co., Little Rock, Ark., has secured headquarters in the Arcade building.

Carl G. Nelson, who has been for som time one of the most successful salesmen on the staff of the Emerson-Brantingham Implement Co., Rockford, Ill., has been appointed assistant division sales manager. He has a thorough knowledge of farming conditions throughout the West.

Carl G. Nelson, Assistant Division Sales Manager, Emerson-Brantingham Implement Co.

V. V. Torbensen, Inventor of the Torbensen Internal Drive, Now of Eaton Axle Co.

Gil Anderson Returns to Stutz Co.

Gil Anderson, sensational automobile racing pilot and engineer, has returned to the Stutz Motor Car Co. of America, Inc., Indianapolis, Ind., as head of the experimental engineering department. His skill and daring as a driver made him a contender in every big motor classic since his debut as a Stutz pilot in the first 500-mile race on the Indianapolis motor speedway in 1911. Those on the inside know him best as the man who not only successfully drove Stutz cars in all competitive races, but also was responsible for their building. Anderson was with the Stutz company from the very start, having carried on the experimental work of the first Stutz car built, and remained with that company until the time of his going with the Revere Motor Car Corporation some two years ago. His engineering abilities placed him at the head of the production department of the Revere company first as engineer and later as general superintendent.

C. J. Morris, who in the past has been a sales man on the staff of the Automobile Equipment Co. of Scranton, Pa., has joined the sales force of the Luce-Paige Motor Car Co., 324 North Washington avenue, distributor of Paige commercial and passenger cars.

H. S. Block, distributor of Chandler and Cleveland motor cars at Baltimore, Md., has just moved into a new show room and service station at the northeast corner of Cathedral and Eager streets, that city.

W. C. McCormick of Williamsport, Pa., has been appointed a distributor of Artcraft tops, made by the General Top Co., Cleveland, O.

T. D. Meese and C. R. Meese recently purchased the C. A. Kiplinger garage at Erickson, Neb.

William B. Walker, Jr., has become purchasing agent of Dupont Motors, Inc.

FINANCIAL NOTES OF THE AUTOMOTIVE INDUSTRY

New General Motors Dividend Equals 12½ Per Cent.—Expansion of Industry Shown by Incorporations—Mullins Body Earnings.

NEW GENERAL MOTORS DIVIDEND EQUALS 12½ PER CENT.

The directors of the General Motors Corporation have fixed the dividend rate at 20 per cent. annually on the old shares (par value $100), and a dividend of 1/10 this amount on the new shares, which were issued on the basis of 10 to one of the old. This represents an increase of eight per cent. in dividend disbursements from the rate paid since 1918. Dividends on the old stock are payable quarterly a $2.50 cash and one-fourth in new shares. Holders of new shares are to receive 25 cents and 1/40 of a share of new stock. It is planned to retire the old stock and hereafter dividends will be paid on the new issue.

On a basis of $40 a share for the new no par value common stock, the quarterly dividend of 1/40 of a share would have a market value of $1. Adding the cash dividend of 25 cents a share, the total $1.25 a share would yield 12½ per cent. on the stock selling at 40.

Regular quarterly dividends of 1½ per cent. on the preferred stock, 1½ per cent. on the six per cent. debenture stock and 1¾ per cent. on the seven per cent. debenture stock were also declared.

The annual report of this company, recently issued, shows that part of its cash working capital to provide for its great increase of business last year was gained through the sale of Liberty bonds from its treasury. The $28,852,018 government bonds bought in 1918 were disposed of, leaving bonds valued at $213,218 to be carried as an investment. The report states that of the $7,305,626 due the company on government contracts Dec. 21 1918, all but $304,334 had been collected by the end of last year.

Sales of motor cars, trucks, etc., amounted to $509,676,694, an increase of $183,631,938 over 1918. The number of automobiles and tractors sold was 406,158, a gain of 64.5 per cent. as compared with the preceding year. The profit, before allowing for federal taxes and emergency appropriations, was $90,517,519, an increase of $55,012,943, and the balance left for common stock dividends was equal to slightly more than $36 per share of stock outstanding at the end of the year.

The net working capital shown in the balance sheet totalled $158,754,500 on Dec. 31 last. Cash increased during the year from $30,636,621 to $48,231,200, but none of this growth resulted from the Liberty bond sale. The report states specifically that these proceeds were used for new construction, as was intended when the investment in government paper was made. Inventories were valued at $128,696,651, against $91,137,512.

The company spent during the year $47,741,697 for real estate, plants and equipment, and added more than $42,000,0000 to property accounts through appraisal of property. The item of "good will, patents, copyrights, etc.," was reduced from $35,714,893 to $20,323,888.

The company bought the Fisher Body Corporation during the year, and the financial side of this transaction is displayed in notes payable amounting to $21,840,000. The Fisher Body stock, valued at $27,600,000, figures in the investments.

The year's pay rolls aggregated $104,380,000, and the number of employees on Dec. 31 was 85,980, compared with 49,118 a year before. The number of stockholders, the report states, is in excess of 24,100, of whom 6650 are employees of the comporation.

The number of passenger cars, trucks and tractors sold for the first quarter of 1920 to March 21 being 119,779, as compared with 82,456 for the corresponding period of the previous year, an increase of 45.2 per cent. The net profits for this period, before deducting federal taxes, are estimated at upward of $26,500,000.

EXPANSION OF ENTERPRISES SHOWN BY INCORPORATIONS.

Since Jan. 1 new concerns have been incorporated representing the huge sum of $4,815,118,600, or an increase of 305 per cent. over the figures in 1919, and more than 622 per cent. as compared wiht the showing made in 1918.

Representing $1,375,797,000 authorized capital 1273 new enterprises were incorporated under the laws of the principal states in March, comparing with a total of $370,871,000 in the same month a year ago, when only 550 companies were organized. The February returns this year indicated that 945 new enterprises took out charters, with an authorized capital of $1,158,861,000.

EARNINGS OF MULLINS BODY CO. FOR QUARTER.

The reported earnings of the Mullins Body Co. for the first quarter of this year are approximately $250,000, or at the rate of $1,000,000 a year, and as the big production months are still ahead it is estimated that the profits, after allowance for taxes, etc., are likely to total over $900,000, or the quivalent of $9 a share on 100,000 shares of common stock ater allowance for preferred dividends.

The total sales in March amounted to $406,000, from which resulted a profit of $132,000. For the three months ended with March the profit was in excess of $283,000 before making deuctions for federal taxes.

The Premier Motor Corporation has made an initial offering of its stock. The authorized capital is $2,000.000.

STUDEBAKER CO. DECLARES $15,000,000 STOCK DIVIDEND.

Directors of the Studebaker Corporation declared, on April 6, a common stock dividend of $15,000,000, or 33 1/3 per cent. of the amount outstanding. It was announced that the new shares, which will bring the company's common stock capitalization up to $60,000,000, will carry the cash dividend payable May 5 to shareholders of record April 19. The purpose of this stock dividend was to capitalize a part of the company's surplus, which now stands at approximately $28,000,000.

A. R. Erskine, president of the company, stated that sales of Studebaker cars from the Detroit plant alone in the quarter ending March 31 numbered 14,000, and that the company expected to dispose of 80,000 during the present year. Last year the company produced and sold 39,356 cars, for which it received about $80,000,000. This compared with 65,885 cars in 1916, the previous record year in point of production.

Net profits last year, after all charges and federal taxes, were $9,312,283, equivalent, after deducting preferred dividends, to $28.54 a share on $30,000,000 common stock. Additional common stock of $15,000,000 was issued in December, 1919, making the $45,000,0000 outstanding at the present time. In 1918 the company earned $10.13 a share on the junior stock issue.

Last year was the first year since 1916 in which the commercial operations of the company were not curtailed by the manufacture of military supplies for war purposes. Mr. Erskine has estimated that total sales for 1920 will aggregate $150,000,000.

BIG DIVIDEND FOR COLUMBIA MOTORS CO.

The Michigan Securities commission has given the Columbia Motors Co. of Detroit authority to increase its capital from $500,000 to $6,000,000, and a stock dividend of 700 per cent. will be given the stockholders. New shares will be issued to each stockholder on the basis of eight new shares in return for each share now held at $10 a share. In addition the company will sell 100,000 at par to present stockholders.

A year ago this stock was quoted at $8 a share, while its present market value is reported to be 10 times that figure. Eighteen per cent. was paid in dividends in 1919 and for the past three months dividends have been paid at the rate of six per cent. monthly. The present production is 60 cars a day, with the probability that 100 a day will soon be made. This company is only three years old.

NOTES OF TRADE AND INDUSTRY

Middleton Joins Kelly Metals Co.

Ray T. Middleton has resigned as general sales manager of the Standard Steel Castings Co., Cleveland, O., to become vice president and director of sales and advertising for the Kelly Metals Co., Chicago, Detroit and Los Angeles.

Mr. Middleton's headquarters will be Chicago, where the Kelly Metals Co. will at an early date establish its principle production plant. The company will continue its present plants in Detroit and Los Angeles and later establish a third branch plant at a point to be selected in the East.

Mr. Middleton's past experience with such concerns as the Brown Hoist Machinery Co., the Elwell Parker Electric Co., the Rhinelander Ball Bearings Co.

Ray T. Middleton, Vice President and Director of Sales, Kelly Metals Co.

and the Steel Products Co. peculiarly fit him for the new duties he assumes.

Mr. Middleton announces additions to the sales staff of his company as follows:

C. G. Germaine, who has represented the standard welding plant of the Standard Parts Co. in the western territory, has resigned to accept the position of western representative of the Kelly Metals Co. with headquarters at Chicago.

S. C. Bohannon of Indianapolis, one of the successful sales representatives of the Hoosier state, has been appointed State of Indiana representative for Kelly Metals Co. with headquarters at Indianapolis. Mr. Bohannon also represents Hartford shock absorbers, Boyce motor meters and Kellogg pumps.

M. E. Simpson, formerly general manager of the Minneapolis Steel and Machinery Co., also of the Toro Motors Co., manufacturer of the Bull tractor, has been appointed representative for the Kelly Metals Co. in the northwest territory, with headquarters at Minneapolis.

DEATH OF ELMER APPERSON, PRESIDENT APPERSON BROTHERS CO.

Elmer Apperson, president of the Apperson Brothers Automobile Co., Kokomo., Ind., died on March 29, while watching an automobile race at the Los Angeles motor speedway, aged 58 years. He was one of the best known figures in the automobile industry having, with his brother Edgar, started in 1894 in the manufacture of one of the first mechanically successful motor cars.

Elmer Apperson was born on the family homestead near Kokomo, Aug. 13. 1861. He came of a good old American family, being a great-great grandson of Daniel Boone, Kentucky's most famous pioneer. He attended the district trade schools in the vicinity of his home and the normal school at Valparaiso. From his early youth he had an aptitude for mechanics. His apprenticeship as a machinist was served in the old Star Machine works in Kokomo, and his first employment as a finished craftsman was in the railroad shops at Peru. In 1888 he established a small machine shop in East Sycamore street, Kokomo, and in 1889 with his brother, Edgar, founded the Riverside Machine Works, on the site now occupied by the south side plant of Apperson Bros. Automobile Co.

The Riverside Machine Works was the first automobile factory in America, although it never assumed that name. In this place Elmer and Edgar Apperson built America's first automobile. Mr. Apperson, in association with Elwood Haynes, organized the Haynes-Apperson Automobile Co., the first automobile company organized in America for the production of motor cars. In 1901 the Appersons withdrew from the Haynes-Apperson Co. and organized the Apperson Brothers Automobile Co., of which Elmer Apperson has been the president since the organization.

Mr. Apperson did not confine his investments to the automobile industry alone, but always manifested a deep interest in Kokomo's commercial growth. He was a director in the Kokomo Trust Co. and a stockholder in the Curtiss-Indiana Co.

Fraternally Mr. Apperson was a member of the order of Elks. He was a member of the South Shore Country club of Chicago, the Chicago Athletic Association, the Burgesses Corps of Albany, N. Y., and the Kokomo Country club. In politics Mr. Apperson was Republican and his religious affiliation was with the Presbyterian church.

Mr. Apperson was united in marriage with Catherine Elizabeth Clancy, the daughter of Matthew Clancy of Chicago, in 1912. He is survived by the widow and two brothers, Oscar W., who resides on the Apperson homestead in Taylor township, and Edgar Apperson, Kokomo.

During the 5½ years of war in France, not a single automobile was sold to a private individual in that country.

Expansion Plans of Buick Co.

H. H. Bassett, the recently elected president of the Buick Motor Co., Flint, Mich., announces an expansion programme representing a series of the most pretentious developments in the history of the Buick Co. They involve the expenditure, during 1920, of approximately $10,000,000, $7,500,000 of which will be invested in new buidings and equipment at Flint, and the balance in the erection of a new assembly plant at St. Louis.

The new buildings at Flint include a four-story transmission plant, enamelling and motor test buildings, central power plant, drop forge shop, heat treating buildings for motor shop, hardening

Elmer Apperson, Late President, Apperson Brothers Automobile Co.

rooms for tool plant, extension to aluminum foundry, addition to garage building, pattern shop, pattern storage, filling station and central oil house.

MOODY MOTOR SALES BECOMES HAYNES DISTRIBUTOR.

The Moody Motor Sales Co., 128-130 Mason street, Milwaukee, Wis., prominent automobile dealer, has acquired the exclusive selling right for Haynes cars throughout practically the entire state of Wisconsin, according to a recent announcement by S. M. How, general sales manager of the Haynes Automobile Co., Kokomo, Ind.

The members of this new Haynes distribution firm, Joseph Moody, president; Charles R. Moody, vice president, and Chester Moody, secretary and treasurer, are well known to the motoring trade of Milwaukee and vicinity.

Pennsylvania has 2419 farm tractors in operation throughout the state.

Schweinert is President of Schrader's Son Co.

M. CHARLES SCHWEINERT has been elected president of the well known automotive tire accessory concern of A. Schrader's Son, Inc., Brooklyn, N. Y., to succeed Dr. Charles K. Cole, deceased. Mr. Schweinert entered the employ of the Schrader company 34 years ago as an office boy and has been associated with it ever since during its growth from a three-story factory at 32 Rose street, New York City, to its present seven-story fireproof building occupying the entire block at Atlantic and Vanderbilt avenues, Brooklyn.

The new president has long enjoyed a wide popularity among the men who made and now direct the tire industry of the country. Every improvement brought to the manufacture of tire valves, every saving made in the cost of their manufacture, every widening of their use, has found him an active contributor thereto. It was due to his untiring energy and long foresight that at no time the rapid increase in the manufacture of automobile tires overtook the output of valves to fit these tires.

M. Charles Schweinert, New President, A. Schrader's Son, Brooklyn, N. Y.

Dealers in automobile accessories throughout the country are indebted to Mr. Schweinert for the Schrader sales policy, which is based upon a license agreement and which is designed to permit the smallest dealer to reap the same profit through his sales as the dealers in large cities. This has resulted in giving to the Schrader products a nation-wide distribution and has prevented the use of these products in the demoralizing practise of price cutting.

Mr. Schweinert is also credited with having developed the export department of A. Schrader's Son. It was due to his initiative that the company established factories both in Canada and in England. Under his able management the Schrader valve has reached a position where it is recognized as standard for automobile tires the world over.

The Schrader factory in Brooklyn has long been a model of its kind and the many advantages it offers to its employees are due in a great measure to the personal contact maintained at all times between the officers of the company and the workers.

At the time of the preparedness parade, Mr. Schweinert led a regiment of the Rubber Industry division, which was entirely recruited from among the male employees of A. Schrader's Son. During the war he was active in organizing a company of Home Guards in Hudson county, where he resided at the time, and not only commanded this unit with the rank of major, but contributed liberally to its equipment.

He is an ardent sportsman and numbers among the organizations of which he is a member, the New York Athletic and Columbia Yacht clubs, the Society of Automotive Engineers and the Machinery and Akron City clubs.

HOME BUILDING PLAN FOR LAFAYETTE CO.

The LaFayette Motors Co., Indianapolis, Ind., has started the development of an independent community adjacent to its plant at Mars Hill, which is located 4½ miles from the center of Indianapolis.

The LaFayette Homes Building Co. has been incorporated with a capitalization of $1,000,000 and has started work upon the construction of modern homes to assist in housing the skilled labor required in the production of the new LaFayette car.

A wooded ridge of 110 acres, five blocks from the factory, has been selected as the residential center of Mars Hill. Work has been started in building upon this attractive site a nucleus of 200 modern homes, no two houses alike and served by a business district with stores, bank, hotel, garage and motion picture theater. A modern graded school and a large park and playground are among the community advantages which are receiving the attention of the home builders.

The development of a self-sufficing community, providing a fresh air district for its employees within walking distance of the plant, was one of the motives of the LaFayette Co. in locating at Mars Hill. The LaFayette plan while following the recent trend in this direction has individual features which are attracting interest. The houses will be sold to employees at cost with a payment down and monthly installments which range from $20 to $75 a month, supplying men of varying earning capacities with individual and attractive homes. Houses of a special fire proof concrete type will be favored.

Every one of these houses will be modern, including sewer connection, furnace, electric lights and gas.

It is the intention of some of the officers and division heads of the company to make their homes in this section.

FRANKLIN CO. ACQUIRES EXTENSIVE PROPERTY AT SYRACUSE.

The H. H. Franklin Manufacturing Co., Syracuse, N. Y., has acquired the entire block in that city bounded by Gifford, South Geddes and Seymour streets and South Wilbur avenue. Located immediately south of the main works of the company across Gifford street, the property will be used for the further expansion of the Franklin motor car industry, which is already the largest industrial establishment in Syracuse, employing 5000 persons.

The land purchased comprises approximately three acres and increases the holdings of the company to about 12 acres. It is stated that developments planned will provide for much needed storage room. Possession of the major portion of the property will pass into the hands of the Franklin Co. about May 1.

The H. H. Franklin Manufacturing Co. is now turning out 60 cars a day and it is expected that the total production for next year will not be less than 25,000 cars.

March was the biggest month in the company's history—1542 cars were shipped and 1428 assembled. The best previous record was in August, 1917, when 1133 cars were shipped and 1095 assembled. The week ending March 27 established also the highest weekly shipping record in the history of the company, 413 cars being shipped during that week.

SIMMS CO. DOUBLES SIZE OF PLANT.

One of the busiest plants in New Jersey at the present time is in East Orange, where the Simms Magneto Co., manufacturer of Simms magnetos for passenger cars, trucks, tractors, farm, marine and stationary engines, has started construction work on an extension to its plant which will enable it to increase its production more than 100 per cent. With this additional space and augmented machine equipment which will be installed, the Simms Co. will be able to turn out from 1300 to 1500 magnetos a day. It is expected that this extension will be completed by Aug. 1.

UNIVERSAL TOOL CO. MAINTAINS SERVICE DEPARTMENT.

The Universal Tool Co., Inc., Detroit, Mich., maker of the Universal cylinder reboring tool, main bearing babbitting and boring equipment, brake band mandrels, etc., is maintaining a service department which is devoted exclusively to the interest of users of Universal equipment, wherever located, and all jobbers, dealers and customers are cordially invited to avail themselves of this service, and suggestions for its improvement in any way are always welcomed.

The sales manager of the Universal Tool Co. is E. H. Herman.

The recently organized Motor Castings Co. is to affiliate with the Hercules Motor Manufacturing Co., which has increased its capital to $1,500,000. The company makes heavy duty type engines.

Digitized by Google

NEW CHICAGO PLANT FOR HOOVEN RADIATOR.

The Hooven Radiator Co., Chicago, Ill., announces the perfection of a new tubular radiator designed especially for heavy duty trucks and tractors, the result of more than two years of concentrated study and experimenting by Hooven engineers.

The Hooven Radiator Co. is now occupying its large new factory at 410-420 North Western avenue, Chicago, the erection of which was necessitated by the increased demand for Hooven radiators, which are now standard equipment on several makes of passenger cars, trucks and tractors. As indicative of the wonderful increase in the growth in the business of this company, it may be cited that a year ago the daily output was only 35 radiators, while it is now turning out more than 1000 a day and has a capacity for double that number.

CINCINNATI SPECIALTY'S NEW FACTORY.

The Cincinnati Specialty Manufacturing Co., Cincinnati, O., is just completing a large modern factory as an extension to its present manufacturing facilities. This company has been making an automatic extension reel for electric lamps for some time and now announces the perfection by its experimental department of a new automatic reel which is claimed to be a decided improvement over the old type inasmuch as it includes an automatic switch which turns the light on when ready for use and automatically turns it off again when the lamp is returned to its original position.

The company's experts are also working on the development of an extension reel which can be used in the office and home.

STERNO AUTO NECESSITIES MADE IN NEW PLANT.

The Sterno Corporation of New York, maker for over 30 years of products closely allied to automobile accessories, has just placed on the market a line of accessories, under the trade name of "Sterno Auto Necessities," consisting of Sterno anti-freeze, Sterno primer, Sterno carbon remover and Sterno shellac. Emphasis is laid by the company on the fact that these preparations are absolutely non-injurious to any motor part.

An entire new plant for the exclusive manufacture of these products has been acquired by the Sterno corporation.

MAYBERRY CO. HAS OPENED AT BIRMINGHAM.

The Mayberry Automotive Equipment Co. has opened for business in Birmingham, Ala., under the management of Tom W. Mayberry. This company will distribute a full line of automobile supplies and garage equipment to automobile dealers and garages throughout Alabama, Mississippi and Georgia, conducting a strictly wholesale business and carrying a large, well assorted stock.

Unique Cooperative System Established at Associated Service Building in Buffalo

A SOMEWHAT unique cooperative business enterprise, which was opened in Buffalo, N. Y., last October, is proving a very successful enterprise. This is the Associated Service building, which is stated to be the largest wholesale institution of its kind in the country—a great central market place where buyers and manufacturers are brought together for mutual benefit and profit. Four hundred firms with over 1200 lines of merchandise are now represented in this building.

The 175,000 square feet of floor area is divided into small spaces, each being occupied by a manufacturer, where he puts on display the entire line of merchandise which he manufactures. Through advertising to the merchants in this section of the country the buyers are induced to come to Buffalo to buy, because the Associated Service building offers them a service which enables them to save a great deal of time, energy and money. Here they see hundreds of lines of merchandise under one roof and can look over the lines they are interested in, quickly compare values and prices and get back to their business with the least expense and in comparatively short time.

Another part of the service is the Buyers' club. Any buyer of any kind of merchandise is eligible to membership. There are no dues—it is a service organization. A beautiful club room provides the buyer with every service. There are large reading tables, easy chairs, writing desks, public stenographers, telephone service, city and transportation information bureau, provision for securing hotel accommodations and theater tickets, private conference rooms, etc.

Upon entering the building the buyer is met by an attendant and conducted to the Buyers' club room, where the thousands of products displayed are carefully indexed. After selecting the lines which he desires to see, he is referred to the Merchandising Offering books, which contain an announcement by each manufacturer of his complete line of goods. After looking over the special lines in which he is interested, he may go to the large catalogue and literature display racks and dealers' help displays and find the manufacturer's own story of each of his products. Then, with his plan of campaign mapped out and notation made of the firms he wishes to see, he is conducted through the building by a floor salesmen and shown the actual merchandise in which he is interested. The floor salesman or the manufacturer's own representative will serve him, take his order, arrange delivery dates, discounts, etc.

The various lines of goods are segregated on different floors—for example, the entire second floor is devoted to wearing apparel; the third floor to hard ware, auto supplies, etc.; the fourth floor to furniture; the fifth, to building materials. Model drug and grocery stores are planned for the sixth floor and a machinery exhibit in the basement.

The benefits derived by the manufacturer are even greater. The enormous sales overhead necessitated by advertising and sending salesmen into small towns is materially reduced through Associated Service, because the buyer is brought to him. By having his complete line of products on display in this building, the manufacturer tenant has the advantage of having his goods seen by hundreds of people daily who are there for the express purpose of buying.

CONVENTION BRANCH MANAGERS, NORTH EAST ELECTRIC CO.

The convention of branch managers of the North East Electric Co. was recently held at Rochester, N. Y., the following programme being carried out:

Monday—Arrival and registration: transaction of specific business with various departments and individuals.

Tuesday—First session, 9 a. m.; introductory remark, J. W. Tracy, Purpose and Scope of Meetings, Hours, Rules and Programme; tour of factory, conducted by G. R. Fessenden. Second session, 2 p. m., Design and Development, T. L. Lee; general discussion. Evening, theater.

Wednesday—Third session, 9 a. m., Supervision of Territory, K. O. Wolcott; general discussion. Fourth session, 2 p. m., Branch Procedure (a), Contact with the Public, J. W. Tracy; (b) Branch Accounting Practise, C. W. Coapman; (c) General Routine, K. O. Wolcott; general discussion.

Thursday—Fifth session, 9 a. m., the Engineering Side of Service, G. R. Fessenden; general discussion. Sixth session, 2 p. m., North East Movies. Evening, dinner; addresses by executives.

Friday—Seventh session, 9 a. m., Branch Organization, Personnel and Promises, J. W. Tracy. Eighth session, 2 p. m., North East Policies, J. W. Tracy.

ACTIVITIES OF NEVERFAIL CARBURETOR CO.

The Neverfail Carburetor Co., Long Island City, N. Y., manufacturer of Neverfail carburetors for Ford cars, announces the recent appointment of the Select Products Sales Corporation of Long Island City as exclusive distributor of its products for Brooklyn and Long Island.

Direct factory branches have been established in Detroit and Los Angeles, Cal., the former being in charge of the Frank M. Eldredge Co., and the latter of M. J. Seibert.

The Neverfail Co. has also appoined the following district sales managers: W. L. Banks, Michigan, Ohio and Indiana; Fred W. Engel, Illinois; E. C. Gardner, Minnesota; Deckert Brothers, western New York; T. Cappello, Colorado; Fred J. Mitchell, Utah and Idaho.

NEW BUSINESS FOR EISEMANN MAGNETO CORPORATION.

The Eisemann Magneto Corporation, Brooklyn, N. Y., announces new business recently booked as follows:

New contracts—Graham Brothers, Evansville, Ind., for magneto-generator; Hoffman Brothers Motor Co., Elkhart, Ind., magneto-generator and GS-4 magneto with impulse starter; Minerva Engine Co.; Reliance Motor Truck Co., Appleton, Wis., ignition equipment; Turnbull Motor Truck & Wagon Co., Defiance, O., ignition equipment; Eagle Motor Truck Corporation, St. Louis, Mo., ignition equipment; Eastern Canada Motor Truck Co., Ltd., Ottawa, Canada, ignition equipment; Crow-Elkhart Motor Corporation, Elkhart, Ind., magneto for export cars; General Motors Truck Co., magnetos; Four-Drive Tractor Co.; Highway Motors Co., Chicago, Ill.; Municipal Supply Co., South Bend, Ind.; DuPont Motor Car Manufacturing Co., Wilmington, Del., GS-4 magneto; Foster Motor Car & Manufacturing Co., Montreal, Quebec, GS-6 magneto; Kentucky Wagon Manufacturing Co., magnetos for Dixie Flyer passenger cars.

Renewals—Four-Wheel Drive Auto Co., Clintonville, Wis.; Triangle Motor Co., St. Johns, Mich.; Denby Motor Truck Co., Detroit, Mich.; Iowa Motor Truck Co.; Indiana Motor Truck Co.; United States Motor Truck Co.; Higrade Motors Co.; Famous Truck Co.; United Motors Co.; Nash Motors Co.; J. C. Wilson Co., Detroit, Mich.; Kissell Motor Car Co., Hartford, Wis.; Transport Motor Truck Co., Mt. Pleasant, Mich.; General Motors Co., Pontiac, Mich.; Buda Co., Harvey, Ill.; Acme Motor Truck Co., Cadillac, Mich.; Brockway Motor Truck Co., Cortland, N. Y.

The official Eisemann service station, the Automotive Service Agency, San Francisco, Cal., has appointed two new sub-stations, as follows: Berkman & Wagner, 2500 Webster street, Oakland, Cal.; Nutt Brothers, E. M. M. Service, Lindsay, Cal.

PRODUCTS ADDED TO RAYBESTOS LINE.

The Raybestos Co., Bridgeport, Conn., successor to the Royal Equipment Co., announces that the following products have been added to its line of brake lining, brakes and clutch facings:

Rayco brake lining, for Ford cars, put up in boxes; Raybestos attaching kit and rivets in boxes; Raybestos brake lining cutter; Raybestos Packett; Royal extering, brakes, clutch facings and specialties for Ford cars.

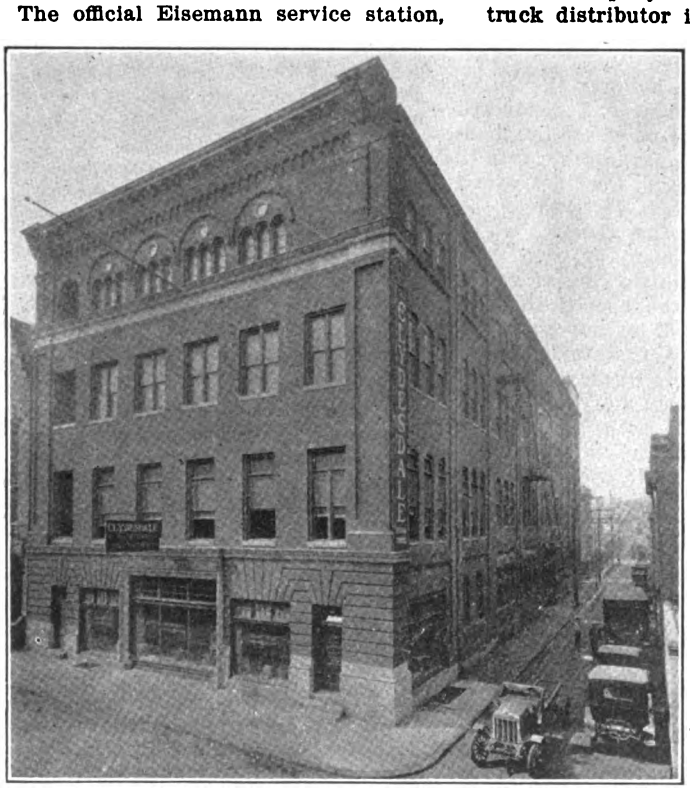
Prices on these products will be cheerfully furnished upon receipt of request addressed to the sales department of the Raybestos Co., as well as a copy of the 1920 edition of the Raybestos Brake Lining and Clutch Data Book furnishing the correct sizes of brake lining and clutch facing required on automotive vehicles.

NEW CLYDESDALE SERVICE STATION AT PHILADELPHIA.

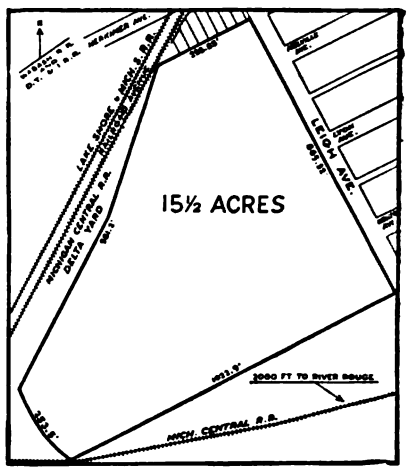
The large sale of Clydesdale trucks in Philadelphia and vicinity and the constantly increasing demands of owners for service has impelled the Cawthrop & Wister Co., the distributor in that city, to establish itself in a commodious four-story building at 14 South 21st street. The building has frontage of 70 feet and is 108 feet deep, having a floor area of approximately 30,000 square feet exclusive of the basement.

The company is the largest exclusive truck distributor in the city. Its activities are directed by J. A. Wister, vice president and general manager, who has been engaged in the trade for 10 years and is widely known. He has been active in trade promotion and during his period of service as president of the Automobile Association of Philadelphia that organization made unusual progress.

The first floor of the building is given over to show rooms for a full series of trucks and to truck storage, and on the floors above are the offices, the service department, with every facility for work of all kinds, and a large stock room in which is an unusually complete supply of parts.



New Service Station of the Cawthrop & Wister Co., Distributor of Clydesdale Trucks, at Philadelphia, Pa.



Plan View of Site of New King Motor Car Factory at Detroit.

KING MOTOR CAR CO.'S NEW PLANT AT DETROIT.

The King Motor Car Co. recently secured an option on a 15-acre site in Detroit on which to construct a new plant for the production of King cars. This site is on the west side of the city, east of the Rouge river. It is nearly surrounded by the leading railroads of that section. On one side it is paralleled by the tracks and yard of the Michigan Central and the Lake Shore & Michigan Southern railroads. The Wabash and the Detroit, Toledo & Iowa railroads are within a short distance to the north. The Michigan Central railroad approaches on another side. The street side is Leigh avenue from Thaddeus street to Herkimer avenue. Dearborn avenue and West Jefferson trolleys are conveniently near and the adjacent locality supplies housing facilities for employees who wish to live near their work.

ENLARGEMENT TO NASH FACTORY AT KENOSHA, WIS.

The Nash Motors Co. is to make substantial additions to its plant at Kenosha, Wis., in the way of an extension to the foundry, 120 by 120 feet, a foundry warehouse and pattern storage building, 80 by 100; a roller bearing tool room and pattern shop, 100 by 600; an addition to the sheet metal shop, 32 by 236; a new boiler room, 50 by 50, and an addition to the heat treating department, 40 by 140. Four courtways that formerly separated long lines of buildings of saw tooth design, have been roofed over and turned into component parts of the factory.

The Kenosha plant is to be devoted to the making of Nash six-cylinder cars and trucks, while the Nash four car will be made exclusively in the plant now under construction at Milwaukee.

There are in operation at the Nash factory over 1500 productive machines and more than 300 factory maintenance machines. The plant embraces 1,011,332 square feet of floor space and in the power plant 120 tons of coal are burnt every 24 hours. There are now on the pay roll 5000 men, which will be substantially increased on the completion of plants in both cities.

Fairbanks Co. Holds Mechanical Clinic

ON MARCH 29 and 30 the automobile and service station equipment division of the Fairbanks Co. held a convention and mechanical clinic at the New York City offices of that company. It was held primarily for the benefit of the company's officers, branch house managers, automobile and service station equipment, department managers and salesmen.

The first day was devoted to talks by H. T. Peters, president of the Fairbanks Co.; J. R. Peters, first vice president; A. G. McMillan, manager of the automobile and service station equipment division, and branch house and division managers, the chief theme being the phenomenal success of this most recently established division of the Fairbanks Co. Later Mr. McMillan read and conducted a general discussion of the new sales campaign.

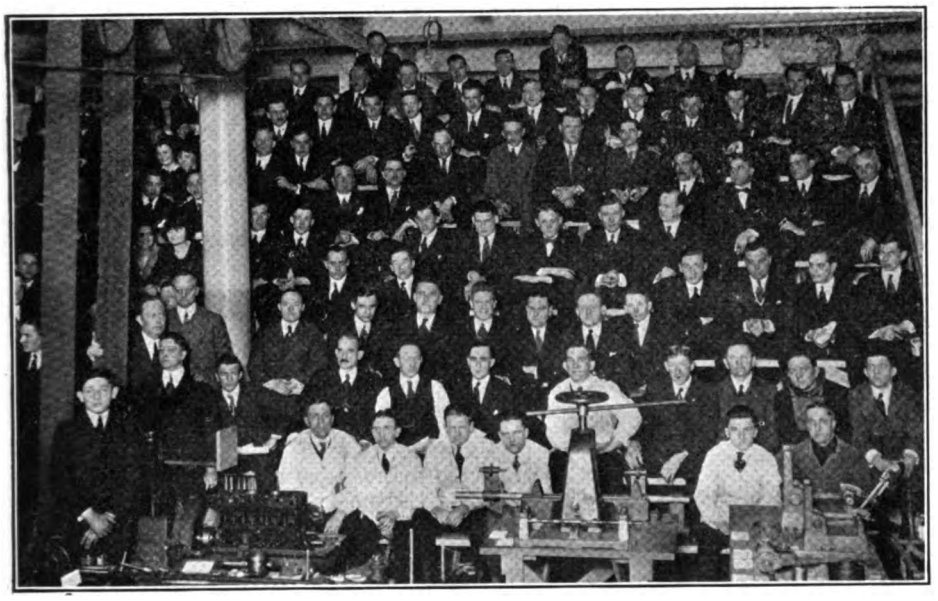
The second day was given over entirely to the mechanical clinic or demonstration of the various labor saving devices and to the display of the model repair shop. One of the features of the clinic was the demonstration of the Ford and Fordson Special, which has been designed especially for burning in and running in model T Ford and Fordson bearings. The old method of scraping bearings by hand required from five to 12 hours by a skilled mechanic and produced but 45-50 per cent. bearing surface. With the Ford and Fordson Special a bearing surface of 100 per cent. was obtained in from 20 to 30 minutes.

All main and connecting rod bearings were burned-in in full view of the spectators and after the bearings had been burned in the motor block was turned and the bearings, connecting rods and pistons were run in and limbered up with oil.

The detailed programme of the clinic follows:

Front and Rear Axle Section—Mr. Boone gave demonstrations of the Dixie stand for handling the entire front and rear systems. The bending iron, spindle body bushing facer, sleeve puller, pinion puller, propellor shaft reamers and jig, end mill and arbor were used in this demonstration.

Motor Section—The second section of the clinic included demonstrations of all tools used on motors. A Ford block was rebabbitted, using the Hempy Cooper four-way torch; babbitt cut off with brick chisel; bearings relieved, using 14-inch bastard file, and filleting was done with the filleting tool. A crankshaft was tested by means of a Geier straightening press and crank and camshaft tester. The crankshaft was then fitted with bearing caps, bolts and shims, and the operation of the test bar was explained. All tools used in this demonstration were taken from stock sets. A very comprehensive talk and demonstration was given on the various types of burning-in machines. Pistons were inserted by means of the Duplex piston inserter.



Managers and Salesmen of Fairbanks Co. in Attendance at Mechanical Clinic at New York.

Valve grinding was next in order, the demonstration showing the use of the Bilt-Rite combination electric drill and valve grinder and the Universal and Ford valve refacing tool. The camshaft alignment reamer and camshaft bearing parter were also demonstrated. A connecting rod was straightened, using the connecting rod jig and piston clamp. Transmission drum bushings were inserted, using arbor press and drivers, and bushings were reamed with the Wilson transmission reaming machine. The removal of the transmission driven gear, one of the hardest to remove, was very easily accomplished by use of the arbor.

Electrical Section—Mr. Lundell conducted the demonstrations and lectures at the electrical section of the clinic, which occupied practically the whole afternoon of the second day. Demonstrations were conducted by sales representatives for the F-B and Bilt-Rite electrical products, the Artex reel, the F-B test stand. Lincoln burning-in motors and Lincoln motors for industrial purposes.

Miscellaneous Section—The construction, operation and labor saving points of the new Duplex rim device, Amco lubricating system, Billmont wrenches and steel Servistock units were explained in detail. These demonstrations completed the programme of the clinic and the spectators were then invited into the model shop to examine the machines and devices at close range.

The entertainment committee pr a very interesting programme for the convention, including luncheon at Wanamaker's both days, a banquet with special entertainment at the Transportation club on Monday evening and on Tuesday evening a dinner party at Hotel Claridge, followed by a theater party at the Hippodrome.

The success of this first convention and clinic would seem to indicate that it will take its place as a regular feature of the New York sales campaign of the automobile and service station equipment division of the Fairbanks Co.

AMBU ENGINEERING INSTITUTE A UNIQUE SCHOOL.

In the heart of what was once Chicago's most exclusive residential district, 2632 Prairie avenue, a unique school has been established, known as the Ambu Engineering Institute, conducted under the auspices of the American Bureau of Engineering, which is rapidly fitting young men from all parts of the country for this trade in which there is still plenty of room.

There are no vacations at this school; there is no time for play. The students put in 44 hours a week of intensive shop and laboratory work supplemented by lectures. The classes are limited to 20, and a new class is made up every alternate week. The course is only of eight weeks' duration—eight weeks of "cramming" and of individual instruction, but at the end of that time the students graduate into well paid positions.

The course embraces all branches of automotive electricity, the first six weeks being devoted to the principles of starting, lighting and ignition, and the last fortnight to the construction and repair of automobile storage batteries, farm lighting, tractors, trucks, aeroplanes and motor boats.

The school was organized in response to a demand from the automotive trade. The need of such an institute has been appreciated especially by battery concerns, garage men and the thousands of car owners everywhere.

AUTO ELECRICIAN'S GUIDE NOW READY.

A new issue of the Auto Electrician's Guide, the book of wiring diagrams published by the Michigan State Auto School, Detroit, is now ready. It contains over 900 diagrams, including 1920 model cars. It is especially interesting to note that internal circuit diagrams are included. The book has been somewhat revised in form and an improved index has been added. It is bound in a strong loose-leaf cover. There is no increase over the old price, $7.50.

PLATE V.

MODEL SERVICE STATION AND SALES ROOM.

Two-Story Fireproof Structure Complete with Show Room, Machine and Repair Shops—Generous Spacings and Modern Equipment

Designed by the Architectural Department of the Automobile Journal Publishing Co.

THE accompanying plans offer a suggestion for an ideal automobile building to be used by an up-to-date, progressive dealer, and its arrangements permit of its use for practically every branch of the trade in which he can conveniently engage.

Facilities are provided for handling the agency for one or two new cars, and the appointments are such that the dealer may handle used cars and take live or dead storage. Space is also provided for the care, renovation and repair of cars. In fact, an examination of the plans will reveal that a careful survey has been taken of the progressive dealer's requirements, which has been taken into consideration in the design offered.

Having provided for all the practical needs of such a structure, the architect has taken into consideration the value of nice appointments where customers are received and accommodated in addition to providing a suitable facade, which is valuable as an advertising feature, a fact testified to by the thousands of dealers throughout the country who have gone to considerable expense in having highly decorative fronts erected to their buildings whenever their means would warrant it.

This structure, of course, is primarily for a dealer in a fairly large city where business would pay for its erection, maintenance and a profit. It is designed to go on a corner lot 50x100 feet. On the ground or first floor plan is an entrance vestibule, leading off the main street. To the right of the entrance is the show room, where several cars may be exhibited and an accessory case set up with other stock displayed in glass cases on the walls. On the left side of the entrance is the office, which has an entrance leading into the garage floor and shops.

On the side street there is a service door leading directly into the garage and in front of the turn table. This arrangement enables the operator of the car to turn his machine in any direction and run it to any position in the garage, onto the elevator or into the repair shop. The latter room is fitted with two repair pits, although there is sufficient room to handle three cars at a time or possibly four.

Manoeuvering cars about inside of a building has always been found a troublesome problem, but the arrangement given in these plans, in relation to the layout of the building, seems to offer a simple and easy solution.

In one corner of the garage, out of the way of the passages from the entrances to the other points in the room, is a wash stand conveniently located near both the turntable and elevator, thereby facilitating the washing and storage of a car with little trouble.

A machine shop of ample dimensions is walled off in the rear left hand corner of the building and lighted by a huge skylight in the light shaft extending through the second floor to the roof. There is an entrance to the machine shop from the garage; also one to a passage back of the elevator, which leads across to the repair shop for the convenience of the machines.

On the second floor are toilet accommodations for customers, office employees, salesmen, a large floor area devoted to new and used car storage, supply and locker rooms and toilet for the employees. Entrance to the front of the second floor is reached by the main staircase, which leads into a hall similar to that on the first floor. To the right of this hall is a rest room and toilet for ladies and on the right similar accommodations for gentlemen.

In the centre of the rear end of the second floor is the elevator well, which divides the skylight over the machine shop from the locker and supply rooms and employees' toilet. These rooms may be reached from the repair shop by stairs.

The exterior of the building is of terra cotta with tile inlay, backed with brick. Steel is used for the frame, large girders in the floor and roof supported on steel "H" columns in piers that are spaced as shown by dotted lines on plans. Reinforced concrete floors and roof slab are necessary to make it a fireproof structure.

Lighting and heating equipment must be of standard make and complying with insurance underwriters requirements. Fireproof specifications would also include steel sash throughout and an automatic roller door at the service entrance on the side street.

The gas tank and service pumps are located outside the entrance on the side street and are connected up so that cars may be filled either from the inside or transient customers may be accommodated at the curb. Lubricating oil reservoirs or tanks may be placed where found most convenient.

The construction cost of such a building with all modern improvements, of course, would vary according to labor conditions and material supplies in different localities, but a minimum estimate of $25,000 and a maximum of $30,000 would cover the costs approximately.

Service Station Tools Which Can Be Made in Spare Time

ALMOST every day in regular repair work some tool is lacking for a special job, and ingenuity must be used in designing and making a special tool which would not only make the job much easier, but would save time as well. In going about among the service stations it will be noted that almost every mechanic has some special device which he has made, in use about the shop, and in some cases it is very handy. Such mechanics are usually the ones that are making a success of their business.

In Fig. 1 is seen a small, but useful device which, at first glance, gives little idea as to its function. The plugs A are made from a solid bar and have eyes in the ends, as shown at B, while the ends C are threaded half-inch standard pipe thread. The bale, or handle, is made of half-inch iron rod and the ends are bent to form a hook at each end, as shown at D. To use the device, remove the bale D and remove the two rear spark plugs from cylinders three and four in the Ford engine. Screw into each spark plug opening one of the plugs A with the eyes turned in the same direction as shown at B. Hook the bale into the eyes B and the block and falls to the bale D and the engine can be lifted from the frame and will be found to balance perfectly. It is wise to place dummy plugs in the other plug openings one and two to prevent dirt or chips from entering.

This same device can be used on other engines by arranging the plugs to balance the engine. If possible to obtain the brass stock, it is better to make the plugs of brass rather than from steel.

In Fig. 2 is shown a simple and useful device which can be employed on many cars for lifting the front ends, which is necessary when replacing or removing broken front springs, or when elevating the engine to tighten bearings. The device is made of ⅝-inch steel rod as shown at B and C. The ends D are bent in the form of a large hook. In the other ends are formed eyes which are shaped around a large steel ring A, to which the hoist is hooked. To use the appliance hook the ends D under the fender iron or the ends of the frame and lift the car from the floor. As soon as the hoist is released the tool can be detached and placed out of the way. It is much handier than a rope or chain, and far safer than either, as there are no knots to slip or become untied.

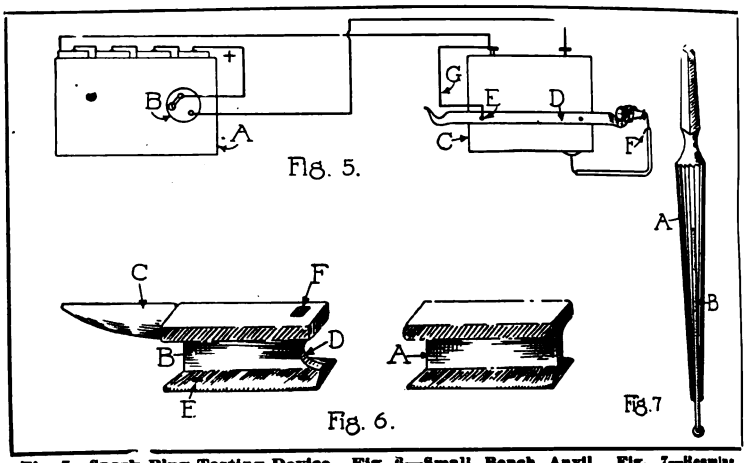

Fig. 5—Spark Plug Testing Device. Fig. 6—Small Bench Anvil. Fig. 7—Reaming Tool.

Cover for Cash Register.

Around the garage there is always more or less dust and dirt flying, which is injurious to the cash register if exposed to it. Most small garages have a cash register, but many do not have offices partitioned off where the dust and dirt are shut out. Following is a description of a cover for protecting the cash register. Make a large wooden case as shown at B, having a sloping front, leaving just room enough for the register to slip inside, still leaving the keyboard so as to be easily gotten at to register sales, etc., as shown at C. Grain or paint the case so that it has an attractive appearance, and in the front that is left open place the curtain on a spring roller. At E place a small button resembling that used on a glove, and at D the part to make the curtain fast. When the register is not in use the curtain can be pulled as a window curtain, thus protecting the register from dust and dirt.

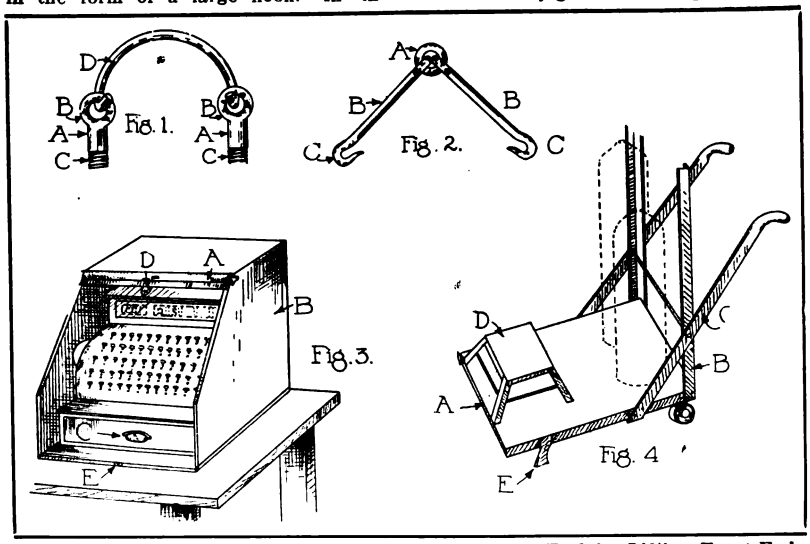

Fig. 1—Device for Lifting Engine from Frame. Fig. 2—Tool for Lifting Front End of Car. Fig. 3—Method of Enclosing Cash Register. Fig. 4—Portable Stand for Welding Apparatus.

Truck for Handling Welding Apparatus.

In Fig. 4 is a handy truck for handling the welding apparatus, as many times it is necessary to move it about from one place to another, when the jobs are so bulky they cannot be moved to the machine. The device described will answer very nicely for the purpose and can be made in a very short time with a waste material gathered from the junk heap. The frame A, B, is made from angle iron and held together with rivets or welded as the case may be. The handles C are taken from an old plow which has been discarded. The small table D is made from scraps of angle iron and serves as a welding surface for the small parts. The foot E acts as a support for the front of the truck when not in use, while the machine rolls on the wheel F when the weight is applied to the handles C, lifting the front end from the floor and making it easily moved about on the two small truck wheels. The welding machine can be clamped to the truck to prevent its tipping off when being moved about.

Spark Plug Tester.

In Fig. 5 is presented a useful device for testing the spark plugs that are taken from the car, and there is doubt whether or not they are in working condition. It is made of parts that can be picked up about the garage. Batteries that test 10 or 12 amperes will do the work satisfactorily.

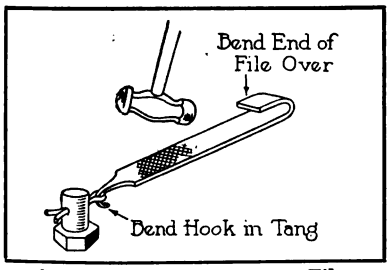
At A is a box which holds five or six dry cells, and can be fastened to the wall in some out of the way place high enough up so as not to be tampered with. C is an old vibrating coil, which can be fastened alongside the battery

Digitized by Google

box. To this attach a bar of metal, D, by the aid of screw E, in such a manner as not to interfere with the working of the coil. One end of the bar should be formed to hold the plug F to be tested as shown. At E, or one of the screws, connect a wire leading from the primary circuit, which will answer as a ground. Connect the secondary wire as shown at H, leading it to the terminal of the plug. Connect the batteries in the regular way in series, positive to negative, etc., with the positive lead of the battery connected to the switch B and the negative connected to the negative point on the coil. The switch B is placed in the circuit to make and break the flow of current. It does not much matter what type of switch is used for this purpose, but a push switch will be found to be the most satisfactory, as it cannot be left on when not in use.

To test the plug it is only necessary to place it in the bar B, as shown, and close the switch. If the plug is in working order the spark will arc the points, and if it is shorted the spark will not appear at the points, but instead will jump around the porcelain, or many times it is not visible at all.

To fasten the secondary wire to plug F it is a good plan to construct a sort of snap device so that it will not be necessary to unscrew the nut on the end of the center electrode, as some little time is lost in doing this.



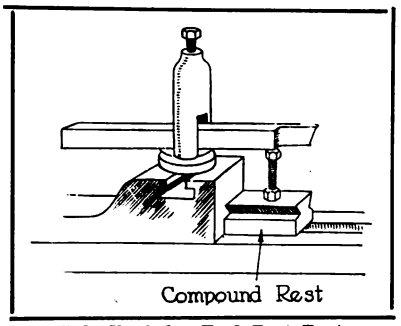
Cotter Pin Puller Made from File.

Small Bench Anvil.

In Fig. 6 is seen a very handy tool which can be made in any shop that is equipped with a forge. It is a small bench anvil made from a piece of railroad iron. At A and B is shown the finished product. The end C represents the nose of an anvil with the square opening for the small hardy at F, and the holes at E will prove valuable when fastening the anvil to the bench, while the circle D is cut out to allow of work being done over the back end. This little anvil is handy because of the fact that it can be moved from place to place to meet requirements, or to get the best light for magneto repairs.

Kink for Reaming.

Quite often it is necessary to ream a hole a trifle larger than can be reamed with the reamer at hand, and in this case the following kink will prove of value. Take a wire nail and place it in one of the flutes far enough up on the taper to cause the reamer to cut oversize, as shown in Fig. 7 at B. The reamer A usually has about five flutes and two wire nails can be used, if necessary, to get the desired results. This, however, only applies to the taper reamer, for the straight reamer will not start so well into the work with the nail in the flute.



Bolt Used for Tool Post Rest.

TOOL POST JACK.

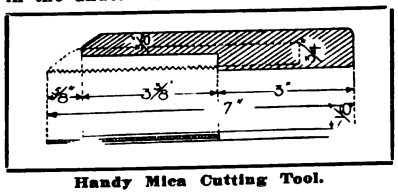
When cutting off large diameter stock in the lathe it is necessary to use a long cutting blade in the tool post and it has been found that placing a jack bolt under the end of the tool near the blade, as shown in the illustration, will prevent the tool from vibrating, thus reducing the danger of its digging in, jamming or breaking. This same idea can be applied to tools that chatter when cutting. The jack bolt is simply a regular stock belt cut the right length so that the next can be unscrewed from the bolt just enough to tighten the tool and support it.

HOME MADE COTTER PIN PULLER.

A cotter pin puller can be made easily from an old file by heating the tang and bending it in the form of a hook, hardening it so that it will not break in use. The wide end of the file is heated in the forge in the same manner, and bent over as shown, forming an end on which to strike the hammer when withdrawing the cotter pin.

MICA CUTTING TOOL.

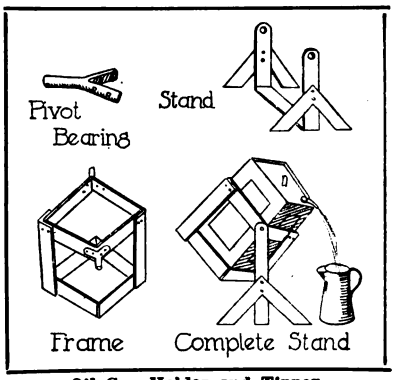
A handy mica cutting tool can be made in a few minutes time by taking a piece of hack saw blade about six inches long and inserting it in a holder. Some repairers prefer a wooden handle, while others prefer to make their handles of more enduring material. One repairer makes the suggestion that a section of an armature coil, taken from an old Delco generator, gives an ideal handle, providing a wide surface on the top that would protect the finger when bearing down on the tool. The piece of coil should be about seven inches in length, ⅛ inch wide, ¾ inch deep at the back and ⅜ inch deep over the blade. A slot is cut in the under side for the saw blade, as shown in illustration, this being held in position by the size of the slot, so that new blades can be inserted from time to time. This device is to be used when cutting down the mica on the motor or generator commutator when wear has lowered the copper segments, allowing the mica to stick up above them, causing the brushes to jump, and giving an uneven current supply.



Handy Mica Cutting Tool.

OIL CAN TIPPER.

A handy oil can tipper can be made in a few hours time by one handy at carpentry by making a stand from 2x3-inch stock, mortising the corners of the upright, rounding off the upper ends, boring a one-half inch hole one inch from the end and fitting the side braces from a one-inch board. The crate which holds the oil can is made from one-inch planed stock as shown, while the picot bearings are of half-inch gas piping, split open at one end, drilled for screw holes and fastened with screws at the two corners. A flange edge of one-inch stock should be fitted at the bottom of the crate to keep the oil can from passing through the crate. This device will be found very handy in the private garage, where the oil is stored in five-gallon square cans.



Oil Can Holder and Tipper.

FORMULA FOR HARDENING CUTTING TOOLS.

To make a hardening solution for metal cutting tools, mix saltpeter two ounces, sal ammoniac two ounces, alum two ounces, salt 1½ pounds and soft water three gallons. Keep the solution in a stone jar, for it will eat a wooden tub and rust an iron pot. Do not draw the temper of the tools, but only warm them enough to relieve the hardening strains. It is also well to rinse the tools well in water, for if this is not done the solution will rust them.

PIPE CLAY TO CLEAN MATS.

Pipe clay acts as a preservative of rubber and makes one of the best mediums for treating the rubber mats used in automobiles. Oil and grease are rubber solvents and ruin the floor mats if allowed to remain on them. The mats should be wiped quite dry and then be pipe-clayed. The pipe clay dries and sucks the oil out of the rubber.

A Big Season *for* Amazon Dealers

An AMAZON sales franchise becomes more valuable day by day and season after season.

The main reason for this condition is the inherent goodness of AMAZON Tires.

Always good, AMAZON Tires are even better than ever this season. The satisfaction of AMAZON users has boosted sales everywhere.

AMAZON Dealers are an enthusiastic lot because their sales efforts result not alone in permanent customers but in the constant increase of Amazon "Boosters" in the community.

DISTRIBUTORS: If you wish to join in Amazon success, NOW is the time to discuss territory.

DEALERS: If Amazon Tires are not sold in your town write immediately for name of distributor.

On The Trail

CHIEF Keokuk's tawny warriors traveled a-horse. They broke new paths thru the wilds—opened up new country—broadened their territory. The horse was their "car."

Today, everywhere, America's motorists are blazing new travel trails, discovering to themselves new country, widening their vision and enjoying all-outdoors. This is especially true when the car is shod with STANDARD FOURS—The Chief of the Tire Tribe.

These tires—made near the home of the old Indian Chieftain partake of his qualities. They are essentially sturdy and true and hard to wear out. They travel easily over rough roads, cushioning the shocks of hard travel. America's motorists have been quick to sense the primitive strength and power of endurance built into STANDARD FOURS. This is the best asset for permanent dealers and distributors business.

Write or wire for exclusive territory now open.

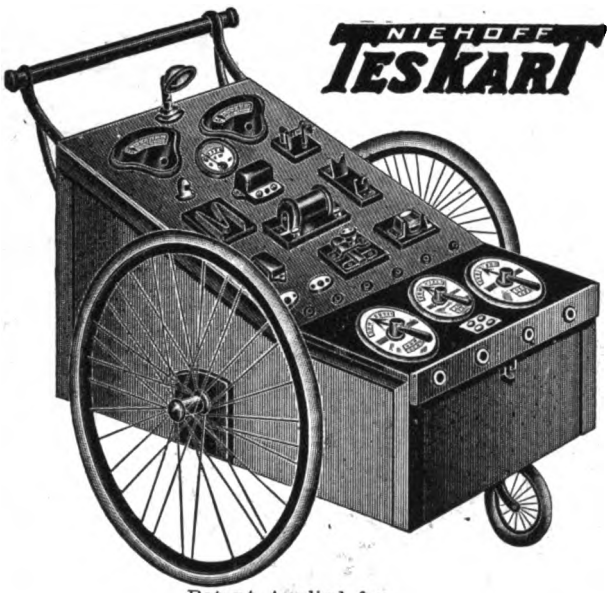
Niehoff Automotive Repair Shop Equipment



Patent Applied for

The NIEHOFF TEST KART is the latest achievement in the way of a complete Testing Outfit for locating all electrical trouble in the ignition, starter, generator, battery, wiring, relays, meters, in fact anything in connection with the electrical mechanism of an automobile. It will also recharge Ford magnets on the car. This outfit is a necessity in every repair shop. With it you can render a service to the motorist that will insure you increased business. It will enable you to inform the motorist intelligently, just what has to be done and give him an estimate as to the approximate cost.

The NIEHOFF TEST KART is the ideal rig for the general automotive garage service station. Price, **$350.00.**

We list below a few other important testing outfits.

Niehoff Defectometer—For testing magnetos and coils. Price, **$50.00.**

Niehoff Generometer—For locating shorts in starting and generator armature. Price, **$55.00.**

Niehoff Mag-Charger and Testing Outfit for Fords—Will recharge Ford magnets on the car, burn out shorts, test coils, spark plug, voltage of magneto, etc. Price, **$60.00.**

Niehoff Growler—To test armatures. Price, **$30.00.**

Niehoff Laminated Magnetizer—To recharge all sizes of magnetos for automobiles.
Storage Battery model. Price, **$25.00.**
110 D. C. Current model. Price, **$30.00.**

Niehoff Power T. B. Test Bench—To test generators and magnets after assembled.
Complete with motor. Price, **$550.00.**

KHK OIL SIGNAL

DEALERS!

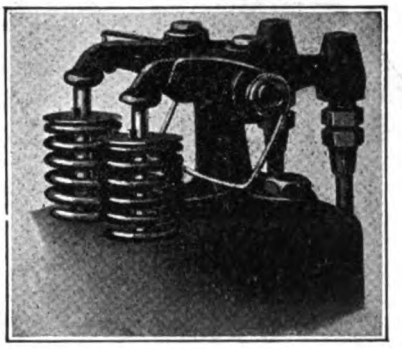
Here's Another Fast Selling KHK Accessory

"When Your Oil is Low Your Horn Will Blow"

Automatically starts horn blowing when oil supply is low. Insurance against burned out bearings, scored pistons and cylinders. Fits all cars. A novel, practical accessory that sells on sight. Popular price. It's the only practical automatic oil signal on the market. Easily attached and no complicated parts to wear or get out of order. Be the first dealer in your town to show this new accessory. It will pay you.

STOP THAT NOISE WITH

KHK Valve in Head MOTOR SILENCERS



Guaranteed to eliminate from 75% to 90% of that clacking noise caused by the action of push rods and rocker arms in Buick, Chevrolet, Oakland, Oldsmobile, Scripps-Booth motors. Adds pep to motor. Eliminates continual tappet adjustment. Dealers say it is the fastest selling accessory they ever saw.

Ask your jobber about KHK Accessories or write direct to

KAY H KAY Co.

967 Woodward Ave. Detroit, Mich.

An Army of Satisfied Users

Wholesale Tire Distributors and Retail Dealers

DO you want to annex an army of satisfied customers? If so, sell them Sterling Tires. They will not only continue to do business with you, but they will tell their neighbors and friends about the honest values you are giving, in Sterling Tires!

For many years the tide has been in favor of Sterling Tires; and today, the tide is stronger and swifter than ever.

Here are the reasons why Sterling Tires have won and held the confidence of dealers and car owners:

First, we have always had a sincere desire to build perfect satisfaction and extreme endurance into every Sterling Tire.

Second, our long and successful experience has taught us a great deal about making dependable tires. We have every manufacturing resource.

Third, we use the very best material—and plenty of it.

We give the broadest and fairest guarantee. It will pay you to read this guarantee!

Territory is being rapidly taken up. Write today for full information; tomorrow may be too late.

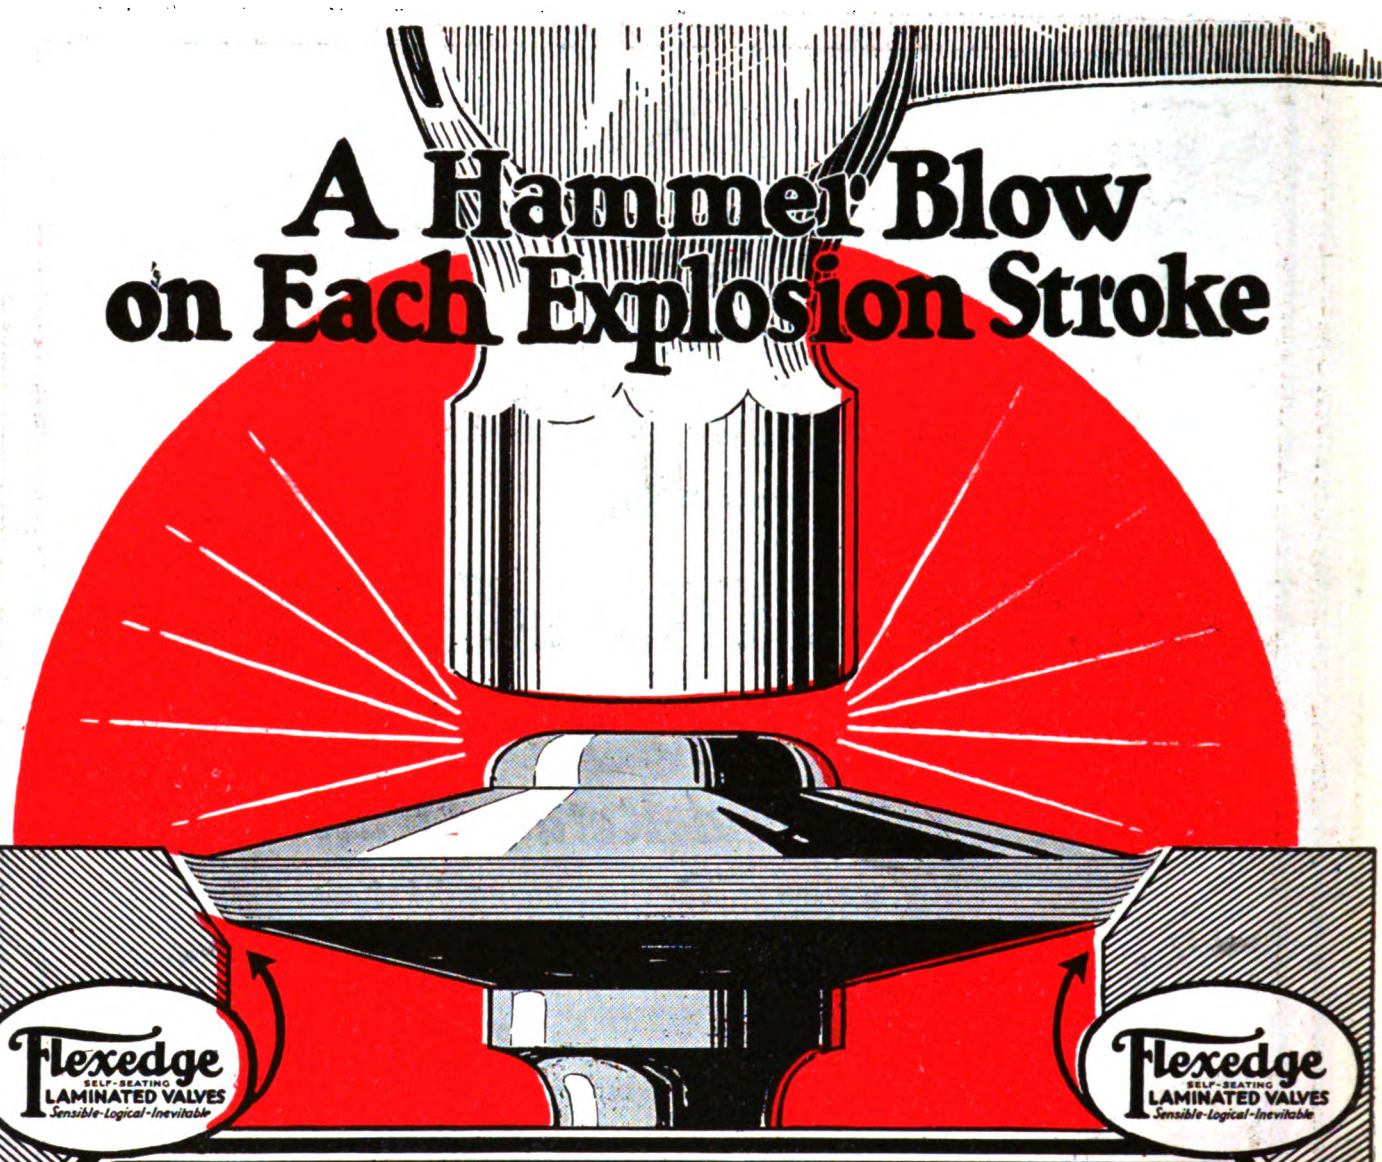
A Hammer Blow on Each Explosion Stroke



Depresses the Centre and Flexes the Edge of the FLEX-EDGE VALVE—*Preventing Carbon Formation*

This movement (pre-determined) isolates the edge of each individual steel disc or laminae of the valve, making it impossible for carbon to find lodgement.
Flexedge valves are guaranteed not to warp, pit or leak, or need regrinding during the life of the motor.
Every motorist wants the high degree of response and power that is experienced when valves are freshly ground. Flexedge valves are always freshly ground. They grind themselves. Dealers find that they turn over with minimum sales resistance. The following jobbers can supply you in standard and oversize stem sizes for all the more popular cars.

This Broad Guarantee Protects Users of the Over-land Guide

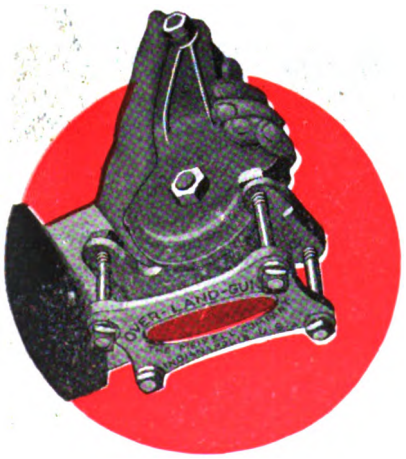
Send us retail price, $8.50, and we will send you parcel post, one Over-land Guide. Use it 20 days, properly installed, and if at the end of that time you are willing to part with it full purchase price will be refunded upon its return.

Are You An Over-land Guide Dealer?

If not, you do not know of this extremely efficient accessory, designed for Ford cars or trucks. None is more useful; there is no substitute for it. No other item of stock will afford greater returns, for the sales are the year round.

You know the demand for articles of quality and merit; these factors impel dealers to recommend Over-land Guides.

Over-land Guides are a well-made 100% efficient utility, sold with an ironclad guarantee to afford satfaction and economize upkeep and repair expense in a short time that will many times exceed the initial cost.



UNLIKE all other STEERING DEVICES the SPRING in the Over-land Guide is completely enclosed and packed in hard grease, which keeps it free from dust and moisture and means indefinite service and no up-keep.

Distinct Over-land Guide Qualities

It saves tires, parts, repair bills, upkeep and greatly prolongs vehicle service.
It is car insurance of extreme value against skidding, ditching, collisions and personal danger of passengers.
It will protect the car or truck and occupants should the steering gear fail or break.
It keeps the vehicle moving directly ahead; the wheels are aligned no matter what the road surface.
It absorbs road shocks and minimizes the stresses upon the arms and shoulders of the drivers; the machines can be steered with the finger tips.
It minimizes wear upon the vehicle mechanism.
It nullifies danger from a tire blow-out at any speed, for the machine will be kept in its course.
It increases vehicle efficiency, convenience, pleasure and comfort.
It can be changed from one machine to another and will last for years.
It can be installed by anyone in a few minutes.

The Over-land Guide Protects

Wheels	Tires	Wheel Bearings
Wheel Spindles	Steering Pivots	Steering Knuckles
Steering Arms	Tie Rod	Tail Lever
Drag Link	Steering Lever	Steering Column
Radius Rod	Spring	Spring Shackles

List Price $8.50. If not satisfactory after 20 days' trial money will be refunded.

JOBBERS and DEALERS: Ford car and truck owners buy Over-land Guides at sight. The sales opportunities are unlimited. Our proposition is extremely attractive. Send for particulars today.

The aristocrat of the tire world

WORKMANSHIP produces no greater quality than the standards and policies of the institution demand. The product is always a true reflection of the house behind it.

The tires which bear the famous name of Brunswick are made in our own factories. The workmen are guided by the ideals that have made possible a world-wide reputation for highest merit.

Brunswick Tires are made under the direction of experts who constantly promote the standards of perfection set up by the founder of the House of Brunswick 75 years ago.

To both car owner and tire dealer, Brunswick Tires offer the utmost in materials, methods and workmanship. It pays to ride on Brunswicks. It pays to sell them.

Why Don't You PREPARE YOURSELF for One of These Positions?

Repair Shops and Garages the country over are calling for men trained in electrical repairing. This demand has come so quickly—almost overnight—that there are not half enough trained or experienced men to take care of this work.

Big wages are being offered—the work is clean and light. The trained electrical men are the aristocrats of the automobile repair field.

And the demand is increasing faster than men can prepare. This is YOUR opportunity—grasp it NOW. Enroll in first possible class at

AMBU ENGINEERING INSTITUTE

In eight weeks you are trained in the details of Automotive Electricity. You not only learn WHAT to do in every possible case, but you learn WHY you do it.

All instruction is individual—by actual work on standard equipment, under the constant guidance of the teachers. You spend these eight weeks—

Two weeks in fundamental Electricity—laboratory work and class room lectures.

Two weeks in Starting and Lighting. Actual shop work and lectures.

Two weeks in Ignition. Shop work on actual installations——with lectures on theory.

Two weeks in Battery Shop. Building, Repairing and Tearing Down Batteries. Lectures on theory and practice.

Only 20 men to each instructor insures constant individual attention. All of the instructors are the best obtainable. They not only are educated and experienced, each in his line, but they can teach you what they know.

These limited classes start every two weeks.

Pave the way to a bigger, better future by training yourself here. Write today for terms and classes open.

Quicken the Pulse of Trade

Universal Batteries will speed up your sales. They will "quicken the pulse of trade."

From the time the first starting and lighting battery was made until the present time, Universal Batteries have been the preference—they have been in the lead.

The possible sales of the Universal dealer are greater than the sale of any other battery dealer. Greater sales are made possible by the adaptability of Universal Batteries.

There is a Universal Battery for any make or size car. Also a Universal repair part for any make or size battery. This alone makes the dealer's field unlimited.

Conscientious manufacturing principles for years past have established a foundation of prestige for Universal Batteries. Many dealers have built a successful business upon this foundation.

Every dealer that is desirous of building up a permanent and ever increasing Battery business should sell Universal Batteries.

Every dealer who is anxious to give his customers the Battery that will meet every demand, should offer them the Universal Battery.

Also manufacturers of Sealed Glass Cell Batteries for house lighting plants. And parts for any make Sealed Glass Cell Battery.

Reliable dealers are requested to write for interesting sales proposition.

Satisfaction to Your Customer and Profit to Yourself—

that is the experience of the thousands of dealers who recommend, use and sell—**BUCKEYE CLEANSER**
—the auto soap that cleans and polishes.

MADE of pure vegetable oil—without alkali or grit—that acts as a solvent and carries off the dirt in a rich heavy lather.

Not only that, but it also preserves and polishes the finish, adding to the appearance—and hence, to the value—of the car.

No wonder, then, that a soap like this brings satisfaction to your customers, and—because your customers are satisfied—profit to yourself.

Auto supply dealers, general stores and hardware stores find it a ready repeater.

Ask your jobber for particulars.

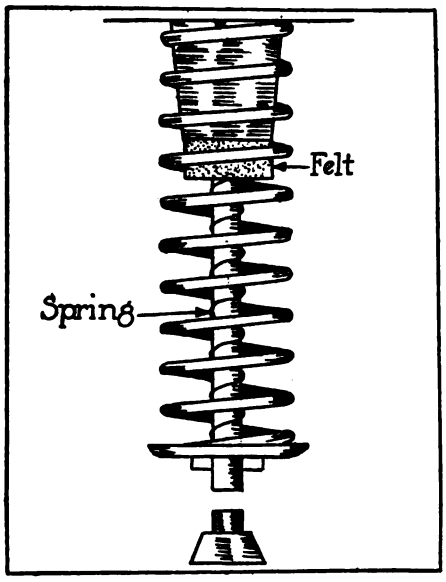
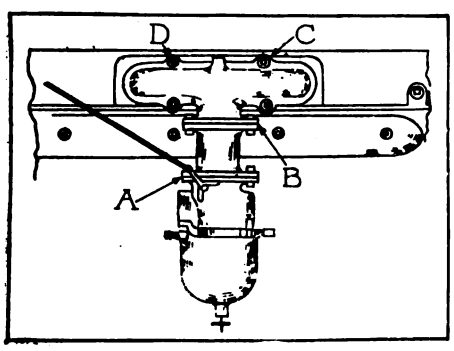
Remedies for Compression Leaks on Fords

The usual remedy for valve stem guides in the Ford engine that are worn and allow compression to leak, is to renew the bushing or ream out the guide and supply new valves with over-size stems. Another method is to fit felt washers at the bottom of the valve guide, holding them in place by an auxiliary spring, placed inside the regular valve spring. As



Method of Fitting Felt Washer Below Worn Valve Stem Guide.

this spring is smaller than the valve spring it should fit easily over the valve stem, with sufficient tension to hold the felt washers in place and not to interfere with the action of the valve spring.



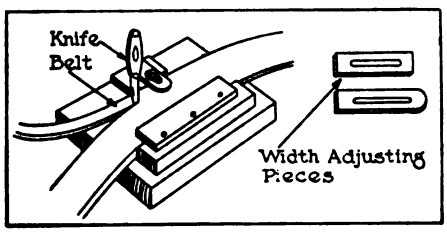
A, B, C, D—Points on Intake Manifold Where Air Leaks May Occur.

The felt washers can be obtained by cutting from the side of an old felt boot, or they may be made from washers that have become oil soaked.

Another method of holding the washers in place is by using light metal clips, which hook over the tops of the valve springs.

BELT CUTTING DEVICE.

A device for cutting different widths of leather belting or narrow strips for fan belts is made as follows: At one corner of the work bench fasten a narrow strip of straight edge board about 10 inches long and four inches wide. On this strip nail a half inch strip of board eight inches long and four inches wide, with one edge overlapping the lower board by one or 1½ inches. Figure the width of the stock which you are going to cut up and lay off the proper distance, say four or five inches; nail on a second strip about four by four inches and drill

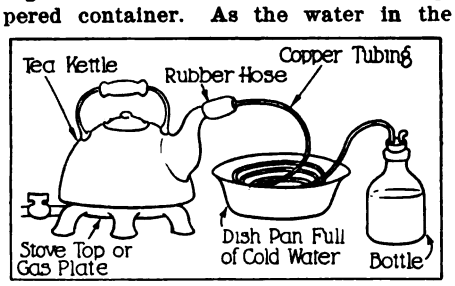


Handy Belt Cutting Device.

a hole through this board and the bench through which place a bolt with the nut at the top. A carriage bolt will do very well as the square shoulder of the bolt can be drawn into the under side of the bench and will keep the bolt from turning. Over this bolt fit a metal guide as shown in the illustration, having a slot cut in it, so that it may be adjusted for the width you may wish to cut the belt. Place a knife blade in the bench, point down, with the edge towards the belt, and draw the belt forward, against the edge.

MAKING DISTILLED WATER.

An arrangement is shown in the illustration that has been found very satisfactory for making distilled water for the storage battery on a small scale. The device consists of an ordinary tea kettle in which water is boiled, gas plate, pan, a coil of metal tubing and a bottle or container in which the distilled water collects as it condenses. Fill the tea kettle half full of water, light the gas burner under the gas plate, connect the metal coil by means of a section of rubber tubing, immerse the coil in the pan containing cold water and connect to the stoppered container. As the water in the



Apparatus for Making Distilled Water.

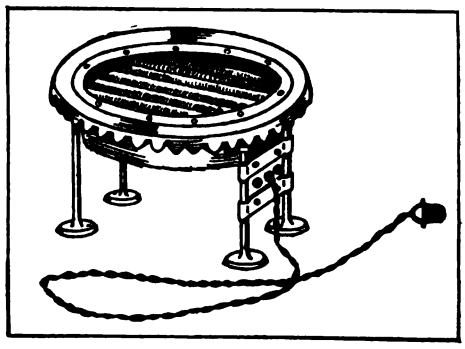
kettle boils the steam will rise into the spout, pass into the coil, become cooled and condensed by the cold water, and pass as distilled water into the bottle container, driving out the air through the short glass tube in the stopper.

LUBRICANT FOR SPRINGS.

In lubricating automobile springs the greatest trouble is found in keeping the lubricant from being squeezed out under pressure. A compound that obviates this is found in graphite and bees wax mixed to a paste and spread upon each leaf. Obviously, the spring must be taken apart to apply this lubricant.

TO MAKE AN ELECTRIC STOVE.

Many uses may be found for the discarded parts of a Ford car, among which is the making of an electric stove. The frame is formed from a discarded bevel gear from the Ford differential and the



Home-Made Electric Stove.

legs are valve stems. The stove is suitable for frying and toasting and is operated on a 110-volt alternating or direct current.

A section of heavy asbestos building material or very thick asbestos paper is fitted inside the bevel ring. The four valve stems, forming the legs, are threaded and screwed into the holes, which are already made in the frame. A nut with a washer is placed on each leg to support the asbestos, which contains a resistance coil composed of 25 feet of No. 20 nichrome wire wound in form of a spring. This is fastened down by a piece of brass wire wound over the spring and inserted in drilled holes in the asbestos support, under which the wire is clamped. Two strips of sheet brass stretching between two of the legs support another piece of asbestos having a hole drilled through the center, allowing the wires to pass through, connecting the stove by means of a cord and plug to the house lighting circuit. This stove may be attached to any ordinary electric light socket and consumes a small amount of current.

MISFIRING FROM AIR LEAKS.

Air leaks are a common cause of misfiring, though often overlooked, and may occur at either of the two joints of the intake manifold, at the carburetor or flange connection where the intake manifold joins the engine. A worn valve guide will allow enough air to be drawn into the cylinders to cause misfiring, at the same time permitting oil to leak out from the cylinders. If oil is discovered leaking out on to the valve stems, it is fair to assume that excess air is being sucked into the fuel charge.

BATTERY TERMINALS.

Occasionally an owner has the experience of finding that his car lacks power when the lights are turned on. The first thing to investigate in this case is the battery terminals, which will usually be found corroded or loosened.

This condition can be quickly remedied by carefully cleaning the terminals with sand paper. Apply a little vaseline before reconnecting and make them tight.

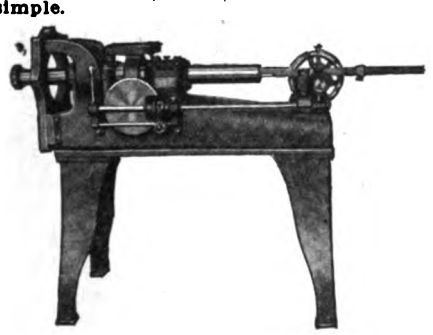
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Piston Clamp for Ford Cars is desirable when assembling the connecting rod to the piston, as a great number of connecting rods are twisted when they are assembled in the vise. This is due to the leverage and pressure to which the con-

necting rod is subjected when assembled in this manner. This device is also used for holding the piston while reaming bushings for wrist pin. It is lined with babbitt in order that the piston and rings cannot be marred and is of a size that will care for all over-size Ford pistons. Net weight, 15 pounds.

Sold by the Fairbanks Co., New York. Price, $10.

No. 5 Marvel Cylinder Reboring Machine is a tool for the service station, machine shop and garage. It comprises a power driven machine used for reboring automobile, truck and tractor engine cylinders, and is claimed to do the work in a more satisfactory manner than can be done by grinding or otherwise. The operation is simple.



Every working part is automatic and is designed for the purpose of making it possible for the operator to secure the best results. The automatic stop feature makes it possible to set the machine to any desired depth, both on the advance and return, and it will automatically stop without attention.

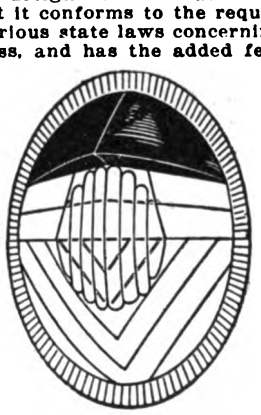
The friction disc feed makes possible any desired feed from 26 to 120 threads to the inch either with the advance or return of the bar. This feature is convenient for the operator, as a hurried roughing cut with the coarser feed and finish with a fine feed cut can be made, thus producing a perfectly smooth cylinder wall entirely clear and free of any foreign substances which might otherwise become embedded in the walls.

The machine calls for less mechanical skill than some machines of this type. Ample room has been provided between the face plate and front bearings to make it easy to make the necessary adjustments on the cutter head. Each cutter head is provided with a graduated scale to aid the operator to set it to the desired over size reboring.

It is claimed that the machine will rebore any gas engine cylinder within its range inside of the limits set by the Society of Automotive Engineers. According to the depth of cut, it is five to 20 times as fast as a grinder and equally as accurate, the maker states. This machine covers the whole range of automobile engine work within its range and will handle motorcycle or tractor engine cylinders with the same results, it is claimed.

Manufactured by the Marvel Machinery Co., 1301-7 South Third Street, Minneapolis, Minn. Prices on application.

The Violet Ray Lens is a headlight lens of unusual quality that is fitted to regular headlight frames by simply taking out the regular glass lens and replacing with the Violet Ray Lens. The lens is of a patented design and is made in such a form that it conforms to the requirements of the various state laws concerning headlight glass, and has the added feature of

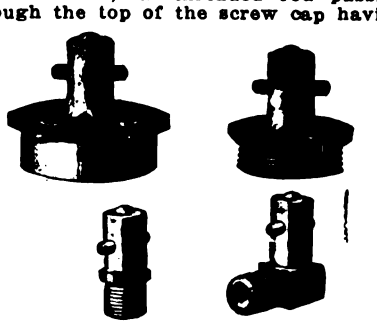


a colored glass of violet color which is pleasing to the eyes of motorists who meet cars equipped with it while driving at night.

It is stated that the light given by the Violet Ray Lens is similar to that of daylight, and the effect is gained by the manufacturer developing a glass of steel blue color that eliminates the bad effects found in using plain white glass.

Manufactured by the L. E. Smith Glass Co., Mount Pleasant, Pa. Price, $3 per pair, any size; $3.50 on the Pacific coast; $4 in Canada.

The Alemite Lubricator Grease Gun was designed to eliminate the disagreeable features of filling and turning down grease cups on spring bushing bolts, steering arm spindles, etc. The gun consists of a container holding the grease, a removable head that is screwed to the top of the container, a threaded rod passing through the top of the screw cap having



a handle attached at the upper end for easy manipulation and a leather-faced plunger at the bottom of the rod inside of the container.

Grease is supplied to the container by removing the screw top and plunger. A flexible tube is fastened to the threaded connection at the bottom of the container by a hexagon coupling, the other end of the tube terminating at a bayonet connection to which are attached the various caps fitting the grease cups of the car. The connectors are four in number, two fitting the tops of grease cups, a third fitting oil ways in steering spindles, etc., and the fourth, an offset connector, fit-

ting other small oil ways. The connectors are provided with a ball valve, which prevents the grease from working back out of the connector after the gun has been disconnected. It is stated that by giving the handle one-half turn the grease is forced into the bearing under 500 pounds pressure, reaching and lubricating every part, and that 30 bearings can be lubricated in 15 minutes with this device.

Manufactured by the Alemite Lubricator Co., 2641 South Michigan Avenue, Chicago, Ill. Prices and literature on request.

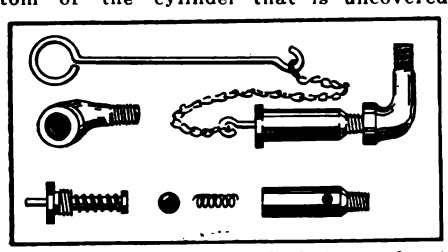
Casco Fan Belt Attachment for the Ford Car consists of a small guide that is fastened on each side to the crankcase flange by means of clamps, the larger bell-like opening fitting over the bell of the starting crank and close to the fan pulley. The purpose of the guide is, as its name implies, to prevent the fan belt from running off the face of the pulley. The guide is made entirely of metal and, it is stated, is easily installed in a minute's time, afterwards becoming a permanent part of the car.

Manufactured by the Casco Manufacturing Co., Thomasville, Ga. Price, 50 cents each.

"Casco" Oil Drain Cock for Ford Cars consists of a cast elbow and nipple that is screwed into either the upper or lower level petcock opening, as desired. Into the elbow is inserted a special formed cylinder, made of cast metal, into which is fitted a spring actuated plunger. A drain opening is provided near the bottom of the cylinder that is uncovered



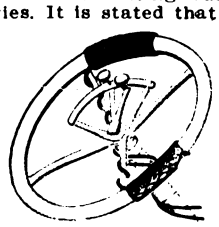
when the plunger is pulled forward. A chain connects the top of the plunger with a wire that passes through an opening in the running board skirt, terminating in a loop, by which the plunger is pulled forward when it is desired to test the oil in the base of the engine. The test cock is easily disassembled for cleaning the cylinder or plunger and may be as quickly assembled.

The principle of the oil drain cock is to enable the car operator to test the level of the oil in the base of the Ford engine without having to stoop or get under the car.

Manufactured by Casco Manufacturing Co., Thomasville, Ga. Price, $1.50 each.

The Automobile Wheel Warmer-Electric is designed to be used with either the direct current furnished from a regular equipped starting and lighting circuit, supplied by a storage battery, or with the alternating current magneto of the Ford engine.

For use with direct current, the wheel warmers are connected in multiple and with the Ford alternating current magneto in series. It is stated that the Wheel



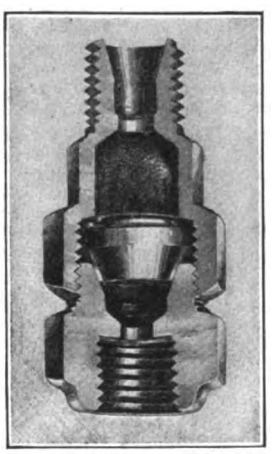
Warmers consume very little current, comparatively less than a head light, and that the expense to operate is practically nothing. The Wheel Warmers can be attached by the motorist in a few moments time, as full instructions accompany each outfit.

Manufactured by the Russell Electric Co., 140 West Austin Avenue, Chicago, Ill. Price complete, $3.

The Monkey Grip Tire Patch consists of a self-vulcanizing cold patch that can be applied while on the road. The heat and friction of the tires while the car is in motion vulcanizes the patch after it has been applied to the puncture. The tube and tire are ready for service immediately after the repair has been made, the operation requiring, the manufacturer claims, but three minutes. The company also makes a casing patch and puts out a combination kit containing both the casing and tube patches. It is stated that Monkey Grip tire and tube patches meet with a ready sale wherever shown.

Manufactured by the Moco Co. of America, Oklahoma City, Okla. Prices and literature on request.

Johnson Gasoline Strainer for the Ford Car is a device that is inserted into the fuel line between the main tank and the carburetor, usually adjoining the carburetor, and its use is to remove dirt or sediment that may have collected in the main tank, found its way into the feed pipe and would eventually reach the carburetor needle valve, causing carburetor



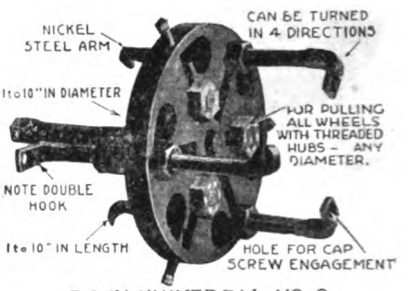
defects that might be difficult to locate. The strainer is easily uncoupled for cleaning by simply loosening the connection and unscrewing it. The strainer is especially adapted for the Johnson model A carburetor for Ford cars, but may be used with other makes of carburetors with equally as good results.

Manufactured by the Johnson Co., 515 Forest Avenue, East Detroit, Mich. Price, $1.25.

The F. & W. Universal Wheel and Gear Puller is specially designed for use on automobiles, trucks and tractors, for pulling wheels, gears and pulleys, straightening shafts and the multitude of pulling and straightening jobs that reach the service station. The puller is strongly made of the best of material and includes in the one unit many different combinations that can be used to advantage by the repair man.

The device No. 4 consists of a large cast disc by which various combinations may be obtained, three arms having hooked ends, threaded and supplied with two nuts each; one power screw, one press plate, three set screws and three hex blocks. With this outfit the repairer is able to handle practically all pulling work on automobiles, trucks and tractors.

Outfit No. 2 is a smaller size, but built equally as heavy, for Fords and other small cars and trucks and consists of a large cast disc perfectly machined, three arms having ends bent at right angles, threaded and fitted with two nuts each: one power screw, one hub ring, one taper ring and one truck ring.



F. & W. UNIVERSAL NO. 3

The Universal wheel and gear puller may be also used as a portable arbor for removing wristpins and bushings or work of like nature by means of the three arms, press plate, discs and power screw.

Full instructions accompany each outfit so that the repairer may easily understand the necessary combinations required for any special job.

Manufactured by the F. & W. Manufacturing Co., Inc., Indianapolis, Ind. Prices on request.

The Goodell-Pratt Valve Spring Lifter is a new device that has recently been added to the Goodell-Pratt line of fine tools. It consists of two arms, forked at the ends to fit around the valve tappet and the valve stem, and fastened at one end by means of a cross head forming a hinged joint. The expansion of the forked arms is accomplished by a slidable cross bar which fits between the arms, equipped with side plates, keeping the slidable block in position between the arms. The block is operated by a screw passing

through a threaded opening in the cross head and pivoted in the cross block. It is raised by turning the screw by means of the handle to the right, while turning the screw to the left expands the arms.

The tool is made from drop forged steel, light in construction and small enough to be used handily in tight places. The arms move on hardened rollers and the screw turns on ball bearings. With this device sufficient room is provided for the removal or insertion of the valve spring fastening pin when the arms are in the expanded position.

Manufactured by the Goodell-Pratt Co., Greenfield, Mass. Prices and literature on request.

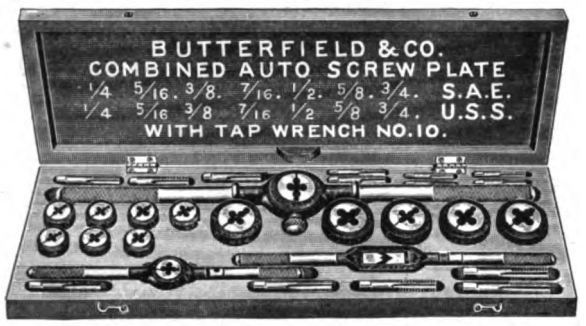
No. 3100 Derby Combination Screw Plates. Every garage and repair shop finds need sooner or later for a combined tap and die set. The No. 3100 Derby Combination Screw Plates, using both the U. S. and S. A. E. standard threads, are especially adapted for this class of work, including, as they do the proper sizes of



both taps and dies and the handles for the use of them.

They are put up in sets of sizes ranging from five, seven, eight, nine and 10, including the different threads 10, 14, 16, 18 and 20. The prices increasing with the number of sizes and the number of threads included in the set.

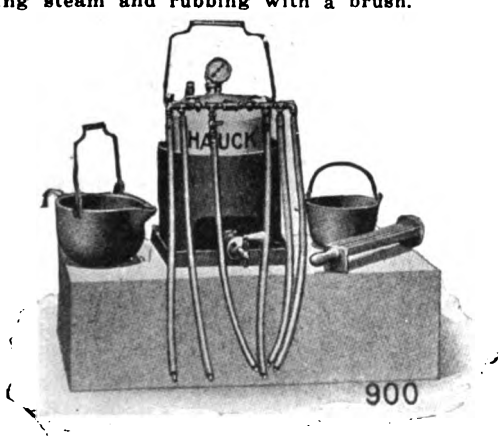
Manufactured by Butterfield & Co., Derby Line, Vt. Prices on application.

The Hauck Storage Battery Repair Outfit is designed for use in service stations where many storage batteries are sealed and unsealed during the day, and where time is an item of great importance.

The outfit consists of a 1½-gallon kerosene heating furnace equipped with hand pump; steam generator of 2½ gallons capacity, with gauge, safety valve, fittings, manifold and six 20-inch lengths of rubber steam hose; one melting kettle of 1½ gallons capacity for heating sealing compound; one lead melting pot of 35 pounds capacity, and one lead mold which molds bars 15 inches long by 5/16 inch in diameter.

It is stated that the Hauck storage battery steamer is capable of producing steam within seven minutes from the time of starting and that it will steam out the cells in storage batteries and permit the cell plates to be removed without any trouble, requiring from four to seven minutes to take out the plates in a three or six-cell battery.

The outside of the battery can be easily cleaned of all grease and mud by applying steam and rubbing with a brush.



The outfit is made throughout of the best of materials for the purpose, by mechanics of many years experience in making this class of goods.

Manufactured by the Hauck Manufacturing Co., 101-113 11th Street, Brooklyn, N. Y. Price, complete, $40.

The Stay Clean Timer for Ford Cars consists of a timer elevator that raises the timer above the oil and dirt at the end of a Ford engine and places the timer in an accessible position.

The timer elevator consists of a cast frame that is positioned in place of the regular Ford timer, extends upward and is

equipped with a drive shaft with bevel gear attached at the bottom of shaft. A second bevel gear is provided that is installed in place of the regular roller contact on the cam shaft and meshes with the gear on the elevator shaft. The Stay Clean Timer is placed at the top of the elevator, and the contact of the timer is fastened to the shaft at the top. Provision is made for fastening the timer case by an arm cast as part of the elevator, extending out at one side, having a spring attached. This spring acts as a tension on the timer case, positioning it with relation to the contact roller of the timer.

It is stated that the installation of the Stay Clean Timer is a very simple matter, requiring about 30 minutes, and may be done by anyone handy with tools.

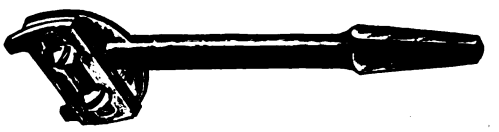
Manufactured by the Milwaukee Air Power Pump Co., 886 Third Street, Milwaukee, Wis. Price, $6.

"Protexall" One-Piece Overall Suits No. 116 feature exclusively the one-piece back design for a work suit, giving a garment which offers exceptional qualities of com-

fort. The material used in making these garments is government khaki, closely woven and fast color. Front pockets are set in similar to overall pockets, placed at the side and slanted sufficiently to make access to them easy. A combination pencil and watch pocket, two hip patch pockets, double stitched and reinforced, rule pocket and hammer hanger are also provided. The collars may be either open roll, loose or tight buttoned as desired. All seams and edges are double-stitched and felled, giving double strength with no raw edges. The garment is made for rough work about the garage, service station or for the motorist who does his own repairing and is designed for a very strong garment.

Manufactured by the Globe Shirt & Overall Co, Corner Main and Pearl Streets, Abingdon, Ill. Prices on request.

The Empress "Perfect" Valve Grinding Tool is designed for use in an ordinary bit brace and has a swivel head, which permits grinding the valves from an angle, while the jaws are adjustable to fit any valve with holes drilled in the top,



or may be removed entirely for a valve that has a slotted head. The jaws are made adjustable and care should be taken to have the projections equally distant from the center.

The "Perfect" valve grinding tool is of rugged construction and, it is stated, will withstand much abuse without breaking. The head is stamped from heavy sheet steel while the handle is made from steel rod.

Manufactured by the Bowen Products Corporation, Auburn, N. Y. Price, 50 cents.

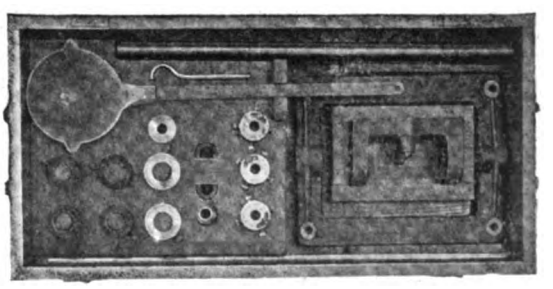
The "W. & B." Spark Plug Wrench is designed to easily reach the spark plug of automobile engines, removing them easily and quickly without danger of breaking the porcelain insulators of the

plugs. It is made of drop forged steel and is stated to be the most convenient wrench yet designed for its purpose.

The box end has a ⅞ inch opening for a ½ inch spark plug, while the open end accommodates the fire plug, ⅝ inch United States standard cap screw, ⅜ inch A. L. A. M. standard nut, ⅝ inch A. L. A. M. standard cap screw and 9/16 inch set screw.

Manufactured by the Whitman & Barnes Manufacturing Co., Akron, O. Prices on request.

The Martell Rebabbitting Fixture is a complete outfit for rebabbitting the main and connecting rod bearings of the Ford



engine. It consists of a frame for holding a line arbor for pouring babbitt into main or connecting rod bearings, stops or dams to keep the babbitt from 'spreading," a melting ladle and enough of the metal for a complete set of bearings.

The outlet is complete in every detail and by its use the repairer is able to run new bearings in the Ford engine, with very little practise. Simple, easily understood instructions are enclosed with each outfit.

Manufactured by Taft-Pierce, Woonsocket, R. I. Prices on request.

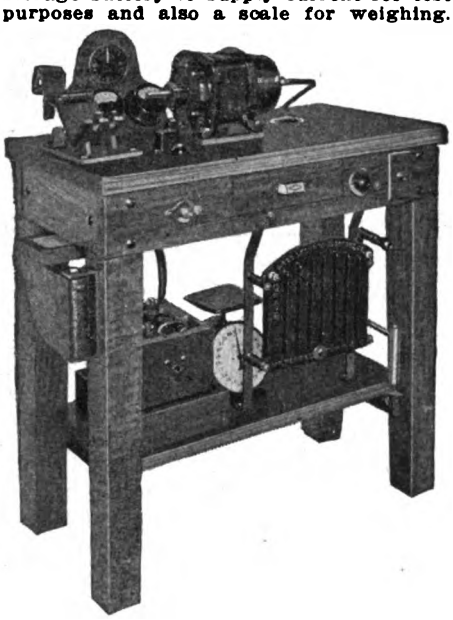
The F-B Test Stand for Locating Defects in the Ford Starting and Lighting Systems is designed primarily for service stations making a specialty of Ford repair work. The test instruments are mounted on a substantial wooden bench in plain view of the tester. A shelf is provided below the bench on which may be placed a storage battery to supply current for test purposes and also a scale for weighing.



Fastened to the front of the stand and supported by braces is located the rheostat or current regulator. The testing motor is mounted on the bench and is provided with an extended shaft to which may be connected the generator or motor to be tested. The device is amply provided with suitable instruments showing the amperage and voltage used and also a speed indicator showing the speed of the driving motor, thus enabling the tester to run the generator or motor being tested under the conditions as found in the car.

It is stated that the third brush location can be properly made with this equipment and that motoring speed and current draw of the generator is shown, as well as the torque and running speed of the motor. Shorts or grounds are claimed to be easily located with the telltale and test points provided with the stand.

Distributed by the Fairbanks Co., Administrative Offices, Broome and Lafayette Streets, New York. Price, $350 complete.

Connecting Rod Alignment and Straightening Jig for Ford and Fordson is a bench machine for aligning and straightening connecting rods of the Ford passenger car and Fordson tractor engines. The device is fastened to the work bench by two bolts, is made of the best grade of gray iron casting, is equipped with two arbors for Ford connecting rods, one for the

lower bearing and the other for the wristpin bearing, and two for the Fordson connecting rod lower bearing and one for the wristpin bearing. All four arbors have knurled ends, facilitating their insertion into the arbor holes. The arbors for the wristpins fit into recesses at the top of the device, the recess for the Fordson being a few inches higher than that for the Ford, as the Fordson connecting rod is longer than that of the Ford engine. Arbor openings are bushed with the proper size bushing, so that the arbors fit them easily. With this device it is possible for the repairer to quickly tell if the bearings fit and also whether the rod is straight; it also shows readily the amount of twist or bend in the rod or play in the bearing. Instructions which accompany the device tell plainly how to remedy these defects.

Manufactured by the Canedy-Otto Manufacturing Co., Chicago Heights, Ill. Price, subject to discount, $40. Net weight, 65 pounds.

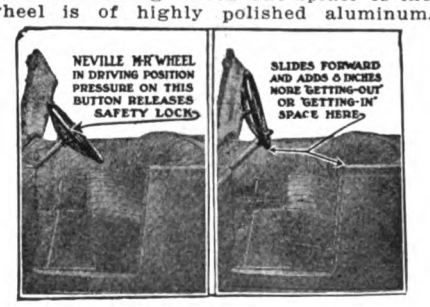
The "SE-CO" Connecting Rod for Ford Cars is designed for replacement purposes in the Ford engine, and combines three essential points, which are very important in connecting rod construction, namely:

Accurate centers, perfect alignment of bearings and hard anchored babbitt.

The "SE-CO" connecting rods are extra tested for strength and wearing qualities, the manufacturer states, and during these tests they must stand a 20 per cent. greater strain than when in actual use in Ford engines.

Manufactured by the Stacks Engineering Co., 216-220 West Ontario Street, Chicago, Ill. Price and literature on request.

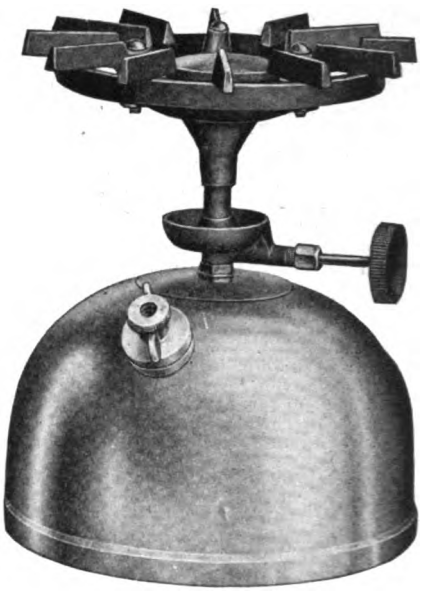
The Neville "More-Room" Steering Wheels are supplied as standard equipment in various models of Dodge, Haynes, Elgin, Liberty, Kissel, Roamer, Gray-Dort and Noma cars. The adjustable feature of the wheel, which is of the sliding type, provides eight inches additional room behind the steering wheel. The spider of the wheel is of highly polished aluminum.



while the rims are of solid walnut beautifully finished, with the inner rim corrugated, providing a good grip for the hands. The Neville may also be used as a replacement wheel for any make of car by simply removing the regular wheel and fitting the Neville wheel in its place. When the wheel is in position for driving it is held firmly in place by a safety lock that is released when a button is pressed, allowing the wheel to be moved forward and upward out of the way when the driver is entering or leaving the car.

Manufactured by the Neville Steering Wheel & Manufacturing Co., 139 Beaubien Street, Detroit, Mich. Prices: 17-inch wheel for Ford cars, $11.50; 17-inch wheel for other cars, $12.50; 18-inch wheels for other cars, $14. Discounts to dealers and jobbers.

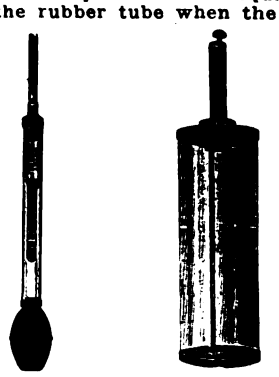
The American Kero-Gas Stove may be used either as a gas stove or heater as desired and has proved a convenient device for motorists, doctors, etc. The fount is made of brass, finished in nickel, has a capacity of one quart of either gasoline, kerosene or wood alcohol and, it is stated, will burn continuously for from six to eight hours.



The gas stove is regularly equipped with a tip for burning gasoline, an additional tip being provided so that kerosene can be used when desired. The stove is substantially built of the best materials obtainable and is guaranteed to do the work for which it is designed. The flame is regulated by means of a cut-off valve of the latest design. The height of the stove is eight inches, while the diameter of the fount is 6½ inches, the shipping weight being five pounds.

Manufactured by the American Gas Machine Co., Albert Lea, Minn., and New York City. Prices and literature on request.

The Luthy Non-Breakable Celluloid Filler is designed to fill the cells of storage batteries with either distilled water or solution. The filler is made of celluloid, which is claimed to be non-breakable, and automatically fills the cells with solution or water to the correct height. Each cell is supplied to the same height, and slopping or spilling of the liquid is prevented, it is stated. The container is cylindrical in shape, closed at the top, except for an opening into which a stopper is fitted. A metal tube is attached to the stopper, to the lower end of which is added a piece of rubber tubing. A button at the top end of the metal tube prevents the liquid from leaving the rubber tube when the tubing



and stopper are removed from the container, in transferring the solution to the battery cells. The device is claimed to be so simple that a child can operate it.

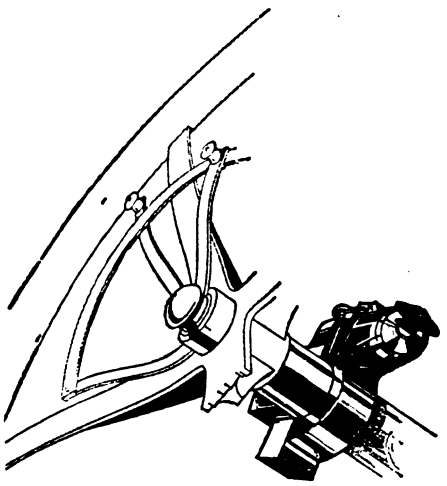
Manufactured by the Luthy Hydrometer Co., 97 Woodward Avenue, Detroit, Mich. Price on request.

Digitized by Google

The "Theftproof Auto Lock" consists of a neat nickel plated ring attached permanently and rigidly to the steering post of the automobile. When the lock is in the closed position a strong case-hardened steel pin passes through the outside steering column into the steering tube, thus holding the steering gear so that the position of the front wheels cannot be changed. This prevents the car from being driven or towed, it is claimed.

The lock is self-adjusting. The driver simply closes the lever, turns the key and steps out of the car. The moment a joy rider or thief turns the wheel the pin snaps into position and the front wheels are locked in one position.

The lock is of the Yale type, having tumblers of varying lengths, and it is possible to have any number of combinations, so that no two locks are alike, the only keys fitting it, being those that come with the lock.



The device is easily attached in a few minutes time either by a mechanic or by a motorist handy with tools, as all that is necessary is to drill a ⅜-inch hole about three inches below the steering wheel, through the steering column and the tube, and about 3/16 of an inch deep into the tube or rod. The ⅜-inch hole in the steering column is reamed out to half an inch, care being taken to keep the reamed hole square with the first hole drilled, and not to ream out the hole in the steering tube or rod.

This device is claimed to be theft proof and to prevent a car from being driven, pushed, coasted or towed for any distance before it would come to a stop itself by running into a curbing or other obstruction. This device bears the approval of the Underwriters' Laboratories, as it successfully withstood all tests given by them.

Manufactured by the Hershey Manufacturing Co., Equitable Building, Denver, Col. Price complete, ready to attach, $15.

The Huskee Worm Drive Electric Valve Grinder is designed as a companion tool to the Huskee drill and they are designed to fill a long felt want in the garage or service station for two dependable tools for repairers of motor vehicles. In the Huskee worm drive electric valve grinder a worm and worm gear are used instead of a train of gears to drive the grinding spindle and the result is a slow driven grinding tool that is claimed to do better and faster work than can possibly be done by hand. The tool in operation is stated to be almost noiseless, absence of chatter or vibration being noticeable. The complete tool, including the motor, has but five moving parts: The armature, a nickel-steel worm, a United States standard phosphor-bronze worm gear, a nickel-steel grooved cam and the oscillating spindle. It is stated that gear noise is entirely eliminated by this type of construction, all moving parts being enclosed in a tight oil and grease proof case, which also keeps out the dust.

A novel feature of the Huskee worm drive tool is that nothing is attached to the lower gear housing. The entire power transmission is independent of the housing and the worm, the worm gear and

the cam all run on shafts (not studs). The lower housing can be taken off and the gear set in motion should it be desired to inspect them under power.

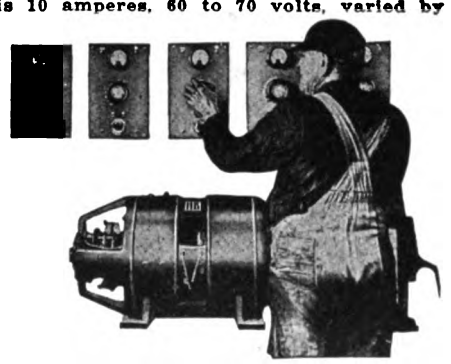
The "lightning" switch is located in the handle, under the finger tips, and is claimed to be the quickest and the most positive in action of any switch yet produced. The Huskee worm drive tool is guaranteed for five years under any and all conditions of use.

Huskee worm drive valve grinders are furnished complete, even to a strong wooden stand, on which the tool is placed when not in use. The tool is equipped with a universal motor adapted for alternating and direct current of either 110 or 220 volts. Specify which voltage is desired when ordering. Sold by all jobbers or may be purchased direct from the factory.

Manufactured by the Consolidated Machine Tool Co., 42-44 Southbridge Street, Worcester, Mass. Price, 110-volt, $52; 220-volt, $55.

The H B 500 Watt Battery Charger has ample capacity to charge one to eight six-volt batteries at one time, is equipped with the special H B automatic voltage control that enables the operator to recharge six, 12 or 24-volt batteries at the same time. The charger is self-starting, using city power, either alternating or high voltage direct current. The outfit is easy to install and operate, as it is self-contained and mounted on one base complete with switch panel and the necessary instruments.

The H B 500 watt charger is very compact, being only 26 inches high, 27 inches long and weighs 280 pounds. Its capacity is 10 amperes, 60 to 70 volts, varied by

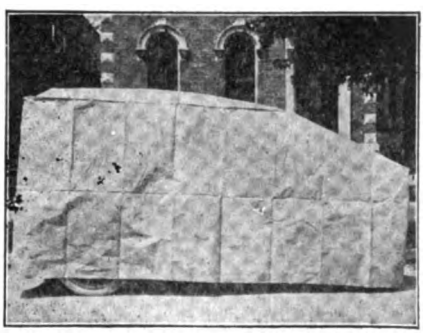


the number of batteries on charge. The switchboard is made of clear black electrical slate, equipped with ammeter, field rheostat, voltage lamp and two controlling switches. The armature of the motor and charger operate on SKF steel ball bearings that require lubrication only once in four months. Outfits of this type are easily purchased by service station owners on a plan which manufacturer will willingly explain on application, and entails small outlay to the purchaser, as by this plan opportunity is given for the machine to pay for itself.

Manufactured by Hobart Brothers, Troy, N. Y. Prices and literature on request.

Kennedy Auto Storage Covers are made of heavy, strong paper, reinforced to prevent tearing. They protect the car against dirt, dust and moisture and prevent the polished portions of the car from tarnishing, keep the car finish from checking in cold weather and also prolong the life of the tires by excluding sunlight.

Kennedy auto covers are ideal for storage purposes, and it is reported that garage men who adopt their use for customers' cars find that they are more and more

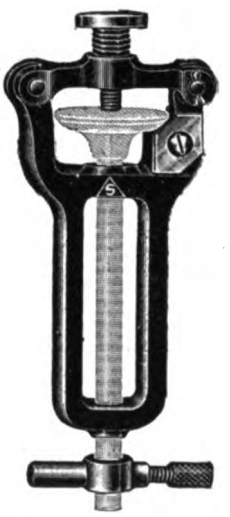


in demand each succeeding season. Many car owners keeping their cars in their own garages for the winter are also using these covers.

Manufactured by the Kennedy Car Liner & Bag Co., Shelbyville, Ind. Prices and literature on request.

The Ford Engine Valve Re-Facer is designed for the motorist who grinds his own engine valves and wishes to true the valve faces before regrinding them.

The device consists of a malleable iron U-shaped frame having openings through which the stem of the valve is passed, and a cutter at a suitable height which refaces the valve. The top consists of a hinged malleable casting, fastened at the ends by steel pins and cotter pins and a



set screw, spring actuated, which supplies the proper tension on the valve, while it is being re-faced. A handle, provided with a set screw, fits the valve stem at the lower end, affording a means for rotating the valve against the cutting tool.

The cutting plate is provided with two edges, so that when one edge becomes dull the plate may be turned, giving a new cutting edge.

Manufactured by Stevens & Co., 375 Broadway, New York City. Price, $1.

The Universal Test Bench is designed for testing all starting motors, generators and magnetos that are used in the modern automobile and truck. The patented universal vise holds any size, shape or make of magneto, starting motor or generator. Only one adjustment is necessary and there is no aligning to be done. The sprocket on the drive shaft of the transmission is moved along until the drive chain is in alignment and, it is stated, that making the complete set up requires only a few minutes.

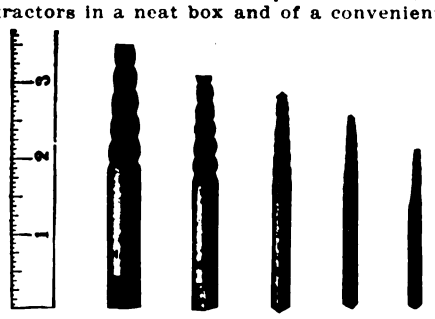
There is a variable speed friction drive transmission operated by a two horsepower motor, the speed being controlled by a lever with thumb release. The friction drive operates either forward or reverse and gives any desired speed. Two six-volt batteries are provided for testing starting motors and generators and two universal three-jaw chucks are furnished, one with sprocket for driving generator and one with prony brake for testing starting motors. The chucks take any size shafts in use today and sleeves are furnished for taking all standard tapered shafts.

The equipment includes an ammeter reading from 25-0-25 for testing generators and one reading from 0-600 for testing starting motors. A voltmeter indicates at what voltage the generator cuts in and a Van Sicklen tachometer shows the speed of the magneto or generator at all times. A sliding adjustable 12-contact plate varying from 1/32 to ½ inch gap is provided, which accurately indicates the spark for all cylinders at one time, and there is a detachable scale feeding up to 30 pounds which gives the exact food pounds exerted in the starting motor.

A double-throw switch gives either six or 12 volts for generator test. All moving parts of the bench are covered by safety guards and it is made of seasoned maple, 35 inches high, 28 inches wide, 48 inches long and a two-inch solid top. The height over all is 58 inches and the shipping weight is 800 pounds.

Manufactured by Becker Brothers, 23-25 North Jefferson Street, Chicago, Ill. Price on application.

The Ezy-Out Screw Extractor No. 15 Set consists of five sizes of Ezy-Out screw extractors in a neat box and of a convenient

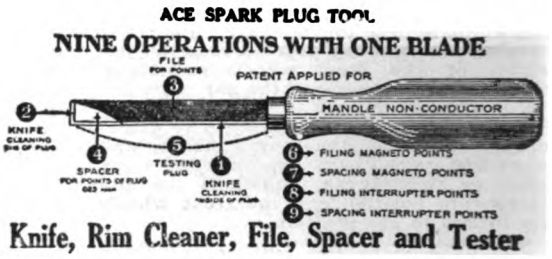


size for the tool room. The sizes are known as Nos. 1, 2, 3, 4 and 5, and are designed with particular reference to the needs of the tool room and the lighter type of machine shop work.

The Ezy-Out tool is made of high-grade steel, is shaped similar to drills, having a square end to which may be fitted a tap wrench. The lower end is provided with a coarse, left hand thread that is inserted into a hole drilled in the broken stud or set screw. Turning the tool with the tap wrench has a tendency to turn the screw in the direction which removes it from the threaded hole. It is stated that studs and screws may be removed very quickly by the use of this patented device. Made and sold in four sets of varying sizes for all classes and grades of work.

Manufactured by the Cleveland Twist Drill Co., New York, Cleveland and Chicago. Prices on request.

The "Ace" Spark Plug Tool, it is stated, is capable of accomplishing nine different operations with one blade, as follows: 1, knife used for cleaning inside of the plug;



2, end for cleaning rim of plug; 3, file for plug points; 4, spacer for accurately setting the plug points to .025 of an inch; 5, blade for short-circuiting plug; 6, filing magneto points; 7, spacing magneto points; 8, filing interrupter points; 9, spacing interrupter points.

The Ace spark plug tool is fitted with a non-conductor handle, providing insulation when testing plugs for short circuits, and is fitted with a highly tempered thin steel blade.

Manufactured by the Wallace Manufacturing Co., Inc., Newark, N. J. Price, 50 cents.

Permaseal One-Piece Piston Rings are designed for replacement purposes in automobile, truck and tractor engines where a reduction in gasoline and oil consumption is desirable. It is stated that the use of Permaseal rings in an engine will create a maximum of power and speed with a minimum amount of fuel; that they prevent leakage of oil and gas by the

pistons and convert a sluggish, powerless engine into one of high compression, powerful, smooth running and economical. Permaseal rings are of one-piece construction and are easily installed by the repairer. Full instructions accompany each set, showing the correct method of installation.

Manufactured by the Grundy Manufacturing Corporation, Detroit, Mich. Prices according to the size of ring.

Spencer Axle Shafts are designed for replacement purposes on many of the smaller cars, such as the Ford, Overland, Grant, Studebaker, Maxwell, Chevrolet, Chandler, Dodge and the Smith Form-a-Truck.

The axle shafts are made of .35-.45 carbon special alloy steel, hot rolled. The shafts are accurately machined and ground, are interchangeable and guaranteed by the manufacturer to be correct

as to size and workmanship. All shafts are carefully inspected, when finished, for flaws or imperfections, and those not up to the standard set by the manufacturer are discarded. The shafts are then carefully oiled and packed to prevent rusting and are ready for delivery.

Manufactured by the Spencer Metal Products Co., Spencer, O. Prices and literature on request.

The R-W Pitless Ball Bearing Automobile Turn Table No. 363 is a simple, substantial and attractively made outfit, built entirely of steel and iron. The turn table is especially adapted for use in private garages, can be installed inside or in front of the garage as desired, it is claimed, and will accommodate all sizes of cars.

The weight of the turn table and car is carried on large ball bearing wheels, which roll on a circular steel track. Each wheel is mounted on two sets of heavy duty combination radial and thrust ball bearings, making the turn table very easy to operate. The outfit can be installed on either a cement or a wooden floor.

From the illustration it will be seen that a large pin fits the center of the cross member joining the two sides and the wheels of the turn table are held in position on the steel track by means of this center pin.

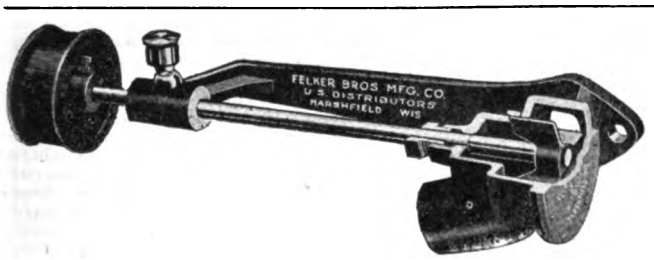
A feature of the device is that it can be easily taken apart and removed to a new location. The first cost is said to be low.

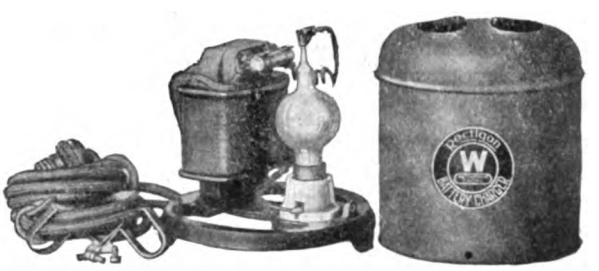
Manufactured by the Richards-Wilcox Manufacturing Co., Aurora, Ill. Prices and literature on request.

The R-W Pit Ball Bearing Automobile Turn Table No. 463 is of simple construction and particularly suitable for installation where a wide variety of cars approach the turn table from all directions. The ball bearing rolls operate on a circular steel track on the pit floor and are amply supported by heavy steel I-beams forming the circle and by cross beams equally spaced to the center. The turn table is covered with two-inch planking, made in two sections and hinged through the center, so that access may be had to the rolls for oiling or repairs.

This outfit can be placed either in the garage, in the cement runway in front of the garage, or in a runway at any convenient location about the grounds.

Manufactured by Richards-Wilcox Manufacturing Co., Aurora, Ill. Prices and literature on request.





Perfection Water Circulating Pumps for Ford Cars comprise a unit that is bolted to the side of the engine after the cast elbow that is fastened to the engine block and the short length of hose connecting it to the tube from the radiator have been removed.

The unit consists of a centrifugal pump, encased in a cast housing, equipped with a bronze bushing acting as a bearing that is adjustable for wear. The pump is connected to the pulley by a suitable length of shaft supported at the pulley end by a babbit bearing, supplied with a grease cup. The pulley face is crowning and the belt is kept in line by a fan pulley which is flanged at the sides. Water connection to the radiator is made by replacing the short length of hose, joining the pump and the water pipe, water being forced directly into the engine water jackets from the pump. It is stated that the water pump can be quickly installed by anyone handy with tools and that it is not necessary to bore new holes in order to fit it to the side of the engine, as the three holes used for fastening the elbow are sufficient for the fastening of the water pump.

Manufactured by the Felker Bros. Manufacturing Co., Marshfield, Wis. Price at dealer's or direct from the factory, $10.

Bull-Dog Transmission Liners for Ford Cars are made of red elm wood, claimed to be the toughest wood that can be obtained, chemically treated and saturated with a high test fire-resisting oil, which prevents burning or charring. It is guaranteed by the manufacturer to outwear three sets of any other type of liner. The wood liner has 31 vacuum cups, which hold the oil thrown off by the spinning drums of the gearset. As the band is clamped to the drum when applying the brake or the low or reverse speed pedals, the oil held in the vacuum cups thoroughly lubricates the surface between the band and drum, reducing wear and relieving the heating effect caused by friction between the parts. As the lining is of wood there are no cloth threads to work loose from the lining, to get into the oil and cause further trouble.

Manufactured by the Reardon Co., Inc., Peoria, Ill. Price, per set of three, $3.

Westinghouse Battery Charging Rectifier is a device recently placed on the market for the use of private car owners who wish to charge their storage batteries from an alternating current circuit. It is provided with a flexible extension cord and plug and can be connected to any house or garage lighting socket. The direct current leads are equipped with special clips for connection to the battery. The connections and operation are, it is stated, so simple that an inexperienced person can use the outfit without difficulty.

The charger is built rugged and at the same time of simple construction, has no moving parts, uses no oil or grease, and, it is claimed, is not affected by heat or cold. All parts are mounted on a circular cast iron base and are enclosed by a metal cover which is attached to the base by three screws. The top of the cover is shaped into a handle for easy carrying and when in use the outfit rests on three feet cast integral with the base.

The principal parts are a transformer and rectifier bulb. The transformer is mounted vertically on the base while a fuse for protecting the device is located on a small insulated block at the top of the transformer. The bulb is mounted in a socket, which is also mounted on the base in front of the transformer. The insulation of the bulb is simple, being screwed into the socket similar to a lamp and a wire lead clipped on the terminal projecting from the top.

The outfits are so designed as to give rated amperage at normal line voltage to three cells and about two-thirds of this current at normal line voltage to six cells. They are furnished in two sizes, one with a direct current rating of 1½ to 2½ amperes and a larger size with direct current rating of three to six amperes. The approximate net weight of the smaller outfit is 9¼ pounds and of the larger 21 pounds.

Manufactured by the Westinghouse Electric and Manufacturing Co., East Pittsburgh, Pa. Prices and literature on request.

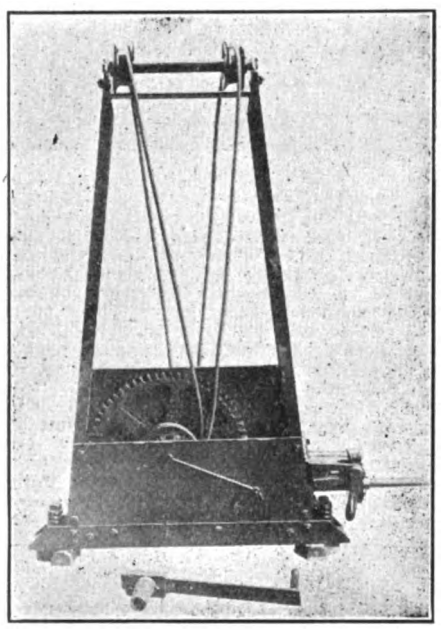
The Columbian Lightning Hoist is designed for lifting truck dump bodies, having capacities up to five tons, to an angle of 30 to 50 degrees, this being done with ease by one man. The hoist is operated by a train of spurs and bevel gears turned by a hand crank at the bottom of the hoist frame. A ratchet and pawl are provided on the hand crank shaft, which prevent the body from returning to its normal position until emptied of its load. Freeing the pawl from the cam allows the body to descend by its own weight to the chassis frame of the truck. The hoist



frame is constructed extra heavy from pressed steel, reinforced at the top and bottom with heavy cross sections of sheet steel. A worm is fastened to the inner end of the hand crankshaft, which meshes with a large worm gear, equipped with a drum at either side, on which the steel cables of the hoist are wound. Grooved pulleys of cast iron are fitted to a cross shaft, mounted in bearings at the top of the hoist, over which the steel cables pass from the ends of the dump body to the drums of the worm gear.

The hoist is firmly fastened to the frame of the car and is very compact, occupying a space eight inches wide behind the driver's seat. This arrangement is considered particularly efficient, as it permits the body load to be set forward, relieving the rear tires, springs, frame and axles of an excessive share of the load.

Another feature which is calculated to appeal to the truck owner is the light weight of this equipment. The Columbian is stated to be the lightest possible in weight consistent with proper strength, thus allowing the use of a dump body of a larger carrying capacity. It fits any chassis or frame and can be easily attached.

Manufactured by the Columbian Steel Tank Co., 1601-1621 West Twelfth Street, Kansas City, Mo. Write for prices and further information.

The "Michigan" Reboring and Burnishing Tool for Fordson Tractor and Ford Engine Cylinders is a tool with which it is possible to rebore and burnish the cylinders of a Ford or Fordson engine to a degree of smoothness comparable to new.

Two locating blocks are furnished with each tool, for centering the boring head accurately in the cylinder. These are slipped into position, one on either side, after the head has been placed on the head of the cylinder, being fastened thereto by bolts passing through the boring head into the cylinder head bolt holes. The tool is held at the bottom of the cylinder by a support which is slipped on the shank of the reboring sleeve and is bolted at the bottom of the block.

The reboring and burnishing tool can be turned by hand by a crank or operated by power through a universal joint suitable for any drill press. The illustration shows the method of hand operation. When boring the crank is turned clockwise, driving two internal gears and two pinions, which in turn move the feed screw and sleeve. The screw and sleeve, while operating in the same direction, turn at different speeds, which gives the proper feed action and at the same time produces the desired resistance of the tool during the strain of cutting. The ratio between the gears and pinions is such that while the sleeve is making one revolution the feed screw makes 1 1/12 revolutions, so that as the sleeve makes 12 revolutions the cutter will advance a distance corresponding to the pitch of one thread on the feed screw in the direction of the axle of the sleeve. This gives a feed of 1/64th of an inch a revolution.

In order to permit the quick return of the cutter to its original position at the top of the cylinder without affecting the bored cylinder, provision is made for disengaging the cutter from the work and returning it to the top of the cylinder rapidly and in a straight line. This is accomplished by shifting the crank to a second position, reversing the direction of its rotation, the sleeve remaining stationary while the screw operates, carrying the cutter rapidly to the top of the cylinder.

To burnish the cylinder the crank is set in a third position, the bottom support is removed from sleeve, the burnishing tool slipped on the screw and the crank turned in the same direction as when boring. The burnishing tool automatically feeds to the top of the cylinder. It is not necessary to use the bottom sup-

port with the burnishing tool, as the tool is self-centering. When the burnishing tool reaches the top of the cylinder, direction or rotation of the crank is reversed and the tool automatically feeds to the bottom of the cylinder.

It is stated that the cutter of the reboring tool is made of high speed steel and is capable of reboring from 20 to 30 cylinders without regrinding.

The tool can be furnished for reboring cylinders of the Fordson tractor, or those of the Ford engine only, or can be supplied with two sets of cutters, two burnishing tools and two sets of gauge blocks, making the one tool applicable for boring both Fordson and Ford engine cylinders.

The complete tool is securely packed in a tool chest with a hinged lid, which is designed for holding it permanently if found desirable.

Manufactured by the Michigan Machine Co., Detroit, Mich. Prices: Outfit A, Fordson tractor cylinder only, $150 f. o. b.; outfit B, Ford model T cylinders only $150 f. o. b.; outfit C, combination for reboring both Fordson tractor and model T Ford cylinders, $225 f. o. b. Detroit.

Peerless Automobile Specialties for the car consist of a line of dressings for mohair and leather tops, lining dyes, cushion dressing, lamp, engine and fender enamels, black gloss finish, air drying Japan liquid wax, body polish, mirroroid, acid proof battery box and anti-rust rim paints, touch-up black, carbon remover, tire paint, gasket shellac and a full line of color finishing paints. Color assortments may be obtained by the jobber and dealer in large or small sizes as desired, including catalogues, color cards, window

signs, etc. The material from which the goods are made is claimed to be of the best, nothing but the highest grades of oil, color and pigment entering into their composition.

Manufactured by the Columbus Varnish Co., Columbus, O. Prices, No. 1 assortment, $23.20; No. 3 assortment, $69.60.

Stow Portable Buffer and Grinder was originally designed for buffing bright surfaces, but since its introduction, it has been applied to many other uses, especially for light grinding. It finds a useful field in buffing tires, automobile parts and similar work. As a grinder it is particularly adapted to roughing small castings. The portable buffer and grinder can be furnished in three sizes complete with motor, flexible shaft, clamp and spindle attachment plug. The motor will

operate from a lamp socket and can be furnished for 110 or 220 volts direct current or single-phase, 60-cycle, alternating current as desired. Special motors can be supplied for currents other than those mentioned.

The motor is one-quarter horsepower, having a shaft ranging in length from 3½ feet to five feet, according to the number of the outfit, using a buffing wheel from two inches to four inches wide and a capacity from 2½ to four inches by ½ to ¾ of an inch, according to the number of the outfit. The speed of the motor is 3400 revolutions a minute on all outfits.

Manufactured by Stow Manufacturing Co., Inc., Binghampton, N. Y. Prices on request.

The Heintz Vulcanizer operates on the steam electric principle. Electricity instead of gas is used for the heating unit and a steam chest embodied in the body of the vulcanizer gives the necessary steam pressure required to do the work. The Heintz Vulcanizer is capable of handling four tubes at a time and these may be of any size from the 30x3 tube of the Ford car to the largest size truck tubes of the large size truck cord tires.

The equipment consists of a vulcanizing stand equipped with four vulcanizing arms and separate spring tension for each arm, electric heating coil beneath the steam chest, steam chest and fusible plug that is designed to melt at a temperature equivalent to 125 pounds steam pressure. This feature is claimed to be superior to the old style safety valve. A steam pressure gauge shows the pressure of the steam in pounds and as this gauge is connected with an automatic electric cut-out the pressure maintained is even throughout the curing process of vulcanizing.

As the Heintz Vulcanizer is built to retain heat, rather than radiate it, after

the machine is once heated the current is turned off the greater part of the time so that the consumption of current is very small in comparison to the amount of vulcanizing accomplished.

The automatic gauge that controls the steam pressure and the flow of the electric current is simple in construction and does not readily get out of order.

The Heintz Vulcanizer is guaranteed for a period of one year from date of purchase, this guarantee being limited to the repair or replacement at Cleveland, O., of any vulcanizer or parts thereof which are defective.

Manufactured by the Jas. C. Heintz & Co., 2069 East Ninth Street, Cleveland, O. Prices on application.

Hudson White Metal Slip-On Running Boards for Ford Cars consists of an all-metal covering for the ordinary sheet iron running boards of the Ford car. They are made in such a manner that they may be slipped over the regular running board and fastened with little labor and in a few moments by anyone handy with tools. The metal of which they are made is said to be treated in such a manner that rust

will not form, nor will they become unsightly as they are not painted, but retain their bright appearance for the life of the car.

Manufactured by the Hudson Motor Specialties Co., Real Estate Trust Building, Philadelphia. Price, $6 for set of two.

The Hillmeter is a device for showing the percentage of grade encountered when a car is ascending or descending a grade. The Hillmeter is especially useful to motorists who wish to know the percentages of the various hills or grades that they

pass over when touring, and is also useful to the demonstrator when showing a car to customers.

The device is attached to the dash of the car by two screws and shows the percentage from 0 to 15 in either direction.

The Hillmeter consists of a glass tube, similar to a spirit level, formed in a curved shape, containing a bubble of air that determines the degree of angularity.

Manufactured by the Meteor Sales Corporation, 140 West 68th Street, New York City. Price, $1.

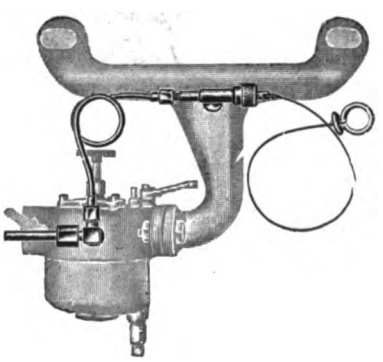
Norwesco Iron Cement is a chemically correct product, the manufacturer states, which will permanently repair cracks, blemishes and sand hollows in iron and steel castings and leaks in radiators,

pipes, threaded joints, etc. Norwesco cement is made in a powder form and manufactured under strict laboratory supervision, which insures a standard quality that will give the desired results. For the convenience of customers Norwesco iron cement is put up in three sizes of cans; six ounces, one pound and five pounds. To use, mix with water and apply according to directions.

Manufactured by the Northwestern Chemical Co., Marietta, O. Prices on request.

J. & B. Gasoline Injector for Ford Cars consists of a priming device that is attached to the intake manifold of the engine by drilling a hole in the manifold 1⅝ inches below the top of the Y with a 11/32-inch drill. Tap this hole with ⅛-inch pipe tap.

Shellac this hole and insert T connection for the injector and screw up tightly. Remove the elbow from carburetor fuel pipe and substitute in its place a three-way connection. Remake fuel pipe connection and connect in the copper tubing



from the three-way connection to the connection on the injector forming the tubing in a coil above the carburetor. From the injector a wire is run out and through the radiator and a ring is fastened to this wire so that the wire may be pulled with the finger.

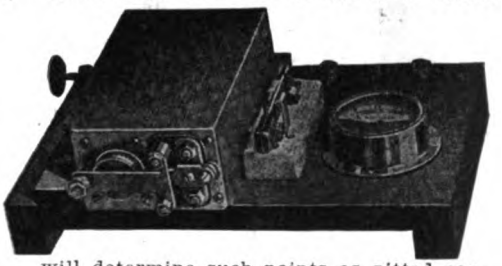
To operate the injector the wire is pulled forward and allowed to spring back suddenly and by so doing a charge of gasoline is drawn from the fuel pipe and forced into the intake manifold, insuring a priming charge for the engine when starting.

Manufactured by the J. & B. Manufacturing Co., Pittsfield, Mass. Price, $3.50.

B-W Coil Tester for Coils of the Ford Car is a simple device by which it is possible to test the coils of the Ford car under similar conditions as found in the car.

The coil tester consists of a wooden base on which is mounted a low reading ammeter and receptacle contact springs in which to place the coil to be tested and adjusted. Two binding posts are provided for connecting either a six-volt storage battery or four dry cells in series, an adjustable spark gap and a switch for making or breaking the circuit.

The coil to be tested is slipped into place so that the springs on the base touch the proper terminals of the coil and a battery is connected as per the polarity marked on the base. The switch is closed and the ammeter should give a fairly steady reading of about 1½ amperes and while this current is flowing a continuous flow of sparks should follow across the spark gap. The use of the B-W tester



will determine such points as pitted contact points, weak spring or too strong a spring, stuck vibrator or a coil that is exhausted.

It is possible to test a set of four coils in a few moments and properly adjust them, it is stated, and the tester will quickly pay for itself on the first few jobs.

Manufactured by the Ballman-Whitten Manufacturing Co., 4060 Forest Park boulevard, St. Louis, Mo. Price, $6.

Se-Ment-Ol Counter Display Stand clearly tells the purpose of the merchandise it displays. An actual reproduction of a leaking radiator holding one can of Se-Ment-Ol (powder) and one can of Se-Ment-Ol (liquid) with the familiar slogan "Se-

Ment-Ol" "finds the leak and fixes it." The display stand is made entirely of metal and is designed to give greater service without becoming soiled or damaged from use or handling.

It is stated that counter displays such as this have doubled the sales of many products, their appeal being wholly in their power of suggestion and impelling action.

Manufactured by the Northwestern Chemical Co., Marietta, O. Dealers interested in this stand may get further information by writing to the company.

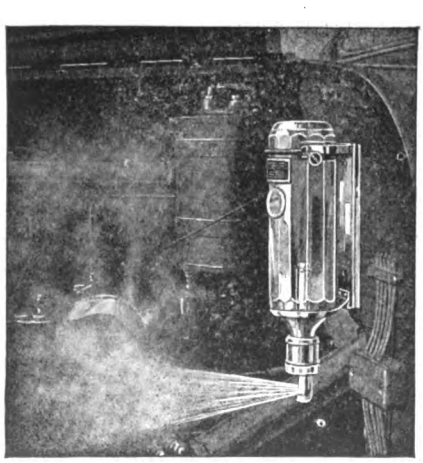
The R-W No. 364- 30-Ton Screw Press is designed primarily for garage and service station use, but may be employed wherever automobile or truck repairing is done. The press is made unusually heavy to withstand the work of pressing shafts out of gears, bending bars, straightening axles and other work of a similar nature.

The two sides or vertical uprights are fitted to floor brackets fastened to the floor by lag screws, and are made of hollowed steel. At equal distances holes have been drilled through the tubes for the insertion of pins, allowing the press block to be raised or lowered according to the length of the work. The tubes are joined across their tops by a trussed cross member and the vertical tubes are fastened rigidly to this cross member. The screw press is adjustable for handling devices of widely varied heights, while the press is powerfully constructed and designed to handle a wide variety of work. The left thread on the screw gives the advantages of a natural right hand movement, which utilizes economically all the power exerted.

Manufactured by the Richards-Wilcox Manufacturing Co., Aurora, Ill. Prices and literature on request.

The Boyce Fire Extinguisher operates automatically, yet can easily be removed from its bracket and operated by hand when necessary. The instant a flame starts under the hood the chemical is released by the extinguisher and sprays the engine with a most efficient yet harmless mixture, which extinguishes the fire automatically. It is stated that an overheated engine will not affect its operation, nor will the chemical in any way injure any part of the engine.



The device consists of a specially formed glass bottle or container that is positioned in a bracket hung from four screws in the dash. The container is fitted with a special nozzle that opens automatically in case the temperature is raised by a fire occurring near by, sprays the chemical on to the flame and, it is stated, effectually puts out the fire.

A large plant has been erected by the company and it is its intention to reach a daily production of 8000 extinguishers.

Manufactured by the Boyce-Veeder Corporation, Long Island City. Price, large size, $8 each; small size, $6 each.

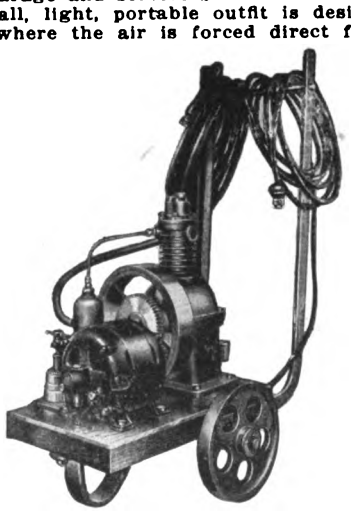
The Luthy Non-Breakable Hydrometer consists of an outer case made of high-grade celluloid, clear as glass, which is claimed to be non-breakable, and an inner case which floats in the electrolyte, made of the same material, provided with figures which indicate the specific gravity of the electrolyte.

A bulb is provided at the upper end of the outer case for filling with electrolyte, while a rubber tube is attached at the bottom through which the liquid is drawn from the battery.

It is stated that the celluloid is not affected by battery acids, is as clear as glass and that the device cannot be surpassed for accuracy.

Manufactured by the Luthy Hydrometer Co., 97 Woodward Avenue, Detroit, Mich. Price, $1.25.

The Curtis Style "Y" Motor Driven Portable Outfit is a newly designed equipment for garage and service station use where a small, light, portable outfit is desired, and where the air is forced direct from



the compressor to the tire to be inflated.

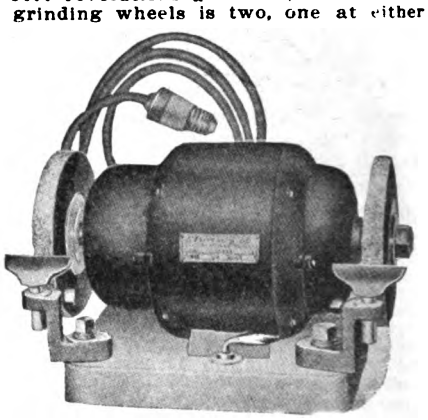
The outfit is self-contained, including the motor, direct connected to the air compressor, and includes hose and chuck to make the connections to the tire, as well as the necessary cord and plug to join to any lamp socket.

The air compressor is a model "B" type, controlled, splash oiled and air cooled, size No. 1, 1⅝ inches by two inches, with fan flywheel and guarded internal cut flywheel gear and motor pinion. The outfit is equipped with a ¼ horsepower alternating or direct current as desired, an approved combination switch for the motor and a relief valve for the expansion chamber, 20 feet of water proof cord with Edison base plug and 15 feet of best oil proofed air hose with tire chuck and air gauge. The outfit is mounted on a substantial hard wood base, supplied with large diameter, easy running wheels and a combination push bar handle, cord and hose rack.

Manufactured by the Curtis Pneumatic Machinery Co., office, 30 Church Street, New York; factory, St. Louis, Mo. Prices and literature on request.

Stow Bench Grinder No. 2 is designed to supply the demand for a light bench equipment to do tool grinding and fine grinding for manufacturing purposes. It will operate from any lamp socket. The motor is fitted with extra heavy bearings, which are protected from dust, as all parts of the motor are enclosed in an oil-tight case. The grinder is complete with tool rests, wheels, switch and lamp cord, ready to attach to any lamp socket.

The speed of the motor is approximately 3400 revolutions a minute, the number of grinding wheels is two, one at either



end of the armature shaft. The direct current machine weighs 40 pounds and the alternating current model 35 pounds. Wheels are six inches by one inch and ¾ inch respectively. The motor is wound for 110 or 220 volts direct current or single-phase alternating current, 60 cycles.

Manufactured by the Stow Manufacturing Co., Inc., Binghamton, N. Y. Prices on request.

The Wayne Bumper for the Overland Four is a new invention just being placed on the market. The most advanced ideas of bumper construction have been embodied in it and it is the result of the combined designing ability of two expert mechanics of the company manufacturing the device. Representatives of the Willys-Overland company, it is stated, have fully indorsed this bumper and state that it meets every requirement of strength and beauty. The bumper is of simple construction, strong and durable, looks neat and is easily attached, and gives a fin-

THE WAYNE BUMPER

ished appearance to the car. All of the bolts, braces, etc., are enclosed by the pan covering the springs and the impression is given that the bumper is an original part of the car.

The manufacturer is anticipating a large sale of these bumpers, judging from the interest shown by dealers and distributors who have seen the finished product.

Manufactured by the Wayne Bumper Co., Fort Wayne, Ind. Prices and literature on request.

Activities of Portage Rubber Co.

Increasing business in Wisconsin and adjoining territory has resulted in the necessity for additional representation in that section of the Portage Rubber Co., Barberton, O. A branch has been opened at 450 Jackson street, Milwaukee, to aid in the greater distribution of Portage tires and tubes.

P. S. Manley, formerly salesman at the Portage Chicago branch, has been appointed branch manager. Mr. Manley has had considerable experience in the rubber industry, formerly being one of the leading salesmen of the Empire tire and later of the Brunswick. Six salesmen have been assigned to work out of this branch.

Announcement is also made by the Portage company of the appointment of F. N. Hammond as special representative of the sales department. Mr. Hammond is well known among tire men and has an extensive knowledge of the needs of the retail industry. He was formerly Goodyear branch manager in Cleveland for a number of years and later Kelly-Springfield branch manager in Detroit.

An important sales conference of Portage branch and district managers was recently held at the home office of the company, Barberton, O., at which the schedule of activities for the present season was received with interest and enthusiasm.

The first day was taken up entirely by the conference proper at which John W. Maguire, vice president and general manager, and Mr. Pasho, general sales manager, spoke. In the evening the branch and district managers and a number of the officers and heads of departments attended a dinner at the City club of Akron.

The second day the several department heads spoke to the conference, among the topics considered being "Credits," by R. J. Cole, assistant treasurer; "Our Advertising Policy," by C. S. Thompson, director of advertising; "Efficiency of Operation," by H. M. Kerr, comptroller; "Our Production Plans," by F. J. Johnson, factory superintendent, and "Our New Service Policy," by J. J. Dettling, manager of the adjusting department.

Those in attendance at the conference were: A. M. Fisher, Atlanta; C. E. Aldridge, Boston; W. J. Shea, Cleveland; J. V. Wedgwood, Chicago; G. H. Snook, Cincinnati; Jack Miller, Dallas; L. R. Vaughan, Des Moines; S. R. Waller, Detroit; F. L. Davies, Kansas City; P. S. Manley, Milwaukee; C. A. Johnson, Minneapolis; B. W. Perks, New York City; C. T. Anderson, Philadelphia; F. N. Hammond, eastern district manager, and Carl Hoag, special representative.

F. N. Hammond, Special Representative Sales Department, Portage Rubber Co.

Kelly-Springfield Annual Report

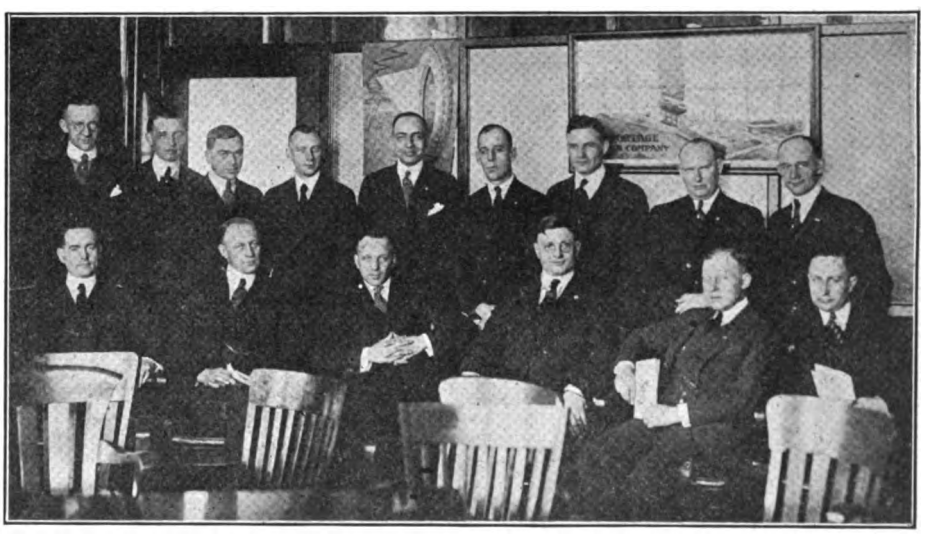
The annual report of the Kelly-Springfield Tire Co., New York City, for the past fiscal year shows gross profits of $7,034,284, as compared with a gross of $7,187,834 in the preceding year. After deducting administration expenses and appropriating $814,275 for estimated excess profits taxes the balance available for dividends was $2,422,522. This was the equivalent after preferred disbursements to approximately $39 a share on the $5,361,978 common stock outstanding at the close of the year.

In the preceding year the earnings were $1,707,735 after the payment of $2,657,492 for income and excess profits taxes. After deduction of preferred dividends the amount available for the common was equal to about $34 a share on the $4,907,200 common then outstanding.

Current assets total $12,225,647 and current liabilities of $670,197.

GOODYEAR'S DAILY MAIL.

The Goodyear Tire & Rubber Co., Akron, O., receives and answers from 16,000 to 18,000 letters a day, as much as would be handled in a city of 30,000 inhabitants. At this rate nearly 6,000,000 pieces of mail are received and sent out by this company every 12 months.



Branch and District Managers of Portage Rubber Co., in Conference at Home Office, Barberton, O.

Goodyear Multiple-Wheel Truck

THE engineers of the Goodyear Tire & Rubber Co., Akron, O., have recently devoted considerable attention to the development of a multiple-wheeled truck which may prove to be a big step toward the solution of the problem of the ultimate tire equipment for heavily loaded commercial vehicles. The result has been the designing of a six-wheel model as shown in the accompanying illustration, which has been in operation for more than six months and has traveled more than 2000 miles over rough roads with heavy overloads. Actual demonstrations and close tabulation of results indicate clearly that this six-wheeler or tandem axle construction truck with four pneumatic-equipped rear wheels has steadier riding qualities, better traction, is less destructive to roads, decreases tire weight and cost, reduces axle weight, has greater braking capacity and permits greater operating radius.

Development of this type is due to the strong conviction of P. W. Litchfield, Goodyear factory manager, that the heavy tonnage truck of the future would be some form of multiple-wheeled vehicle, just as the multiple-wheeled freight car succeeded the single truck type for hauling heavier loads. However, the six-wheeler was not developed in an attempt to produce the ultimate motor truck, but to attempt to solve the problem of pneumatic tire equipment for heavy loads.

As tire cost and weight are perhaps the greatest factors of interest to truck owners, it will be interesting to note that instead of using the giant 48 by 12 pneumatics weighing about 398 pounds each on the rear of five-ton trucks, the tandem axle construction embodied in the new six-wheel truck allows the use of four 40 by eight-inch pneumatic tires weighing 119 pounds each, a reduction of 279 pounds in the weight the driver on tire changes will have to lift. In addition, the four smaller pneumatics cost one-third less than the larger tires.

As the same size of tire is used all around on the truck the eight-inch tire can also be used as a front wheel spare, still further reducing the tire investment and the number of spares necessary to insure continuous operation.

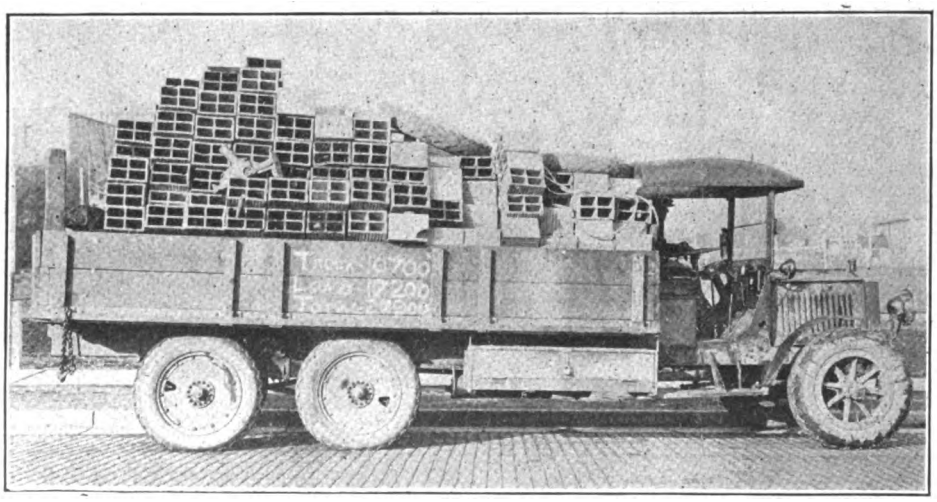
C. M. Wood, in Charge of Good Roads Bureau, Goodyear Tire & Rubber Co.

No more appealing feature can be found for municipalities than that of road saving demonstrated by the pneumatics-equipped six-wheeler. The average road has the maximum base practicable and begins to disintegrate under the excessive pounding of solid tires. With the truck weight distributed on four rear wheels, road and truck engineers estimate that the average road will withstand a load up to seven tons under this newly developed construction with no more destructive effect than that resulting from the 3½-ton load on two rear solid tires.

One striking advantage of pneumatics on the tandem axle construction is that they permit a much greater operating radius and steadier riding qualities. The six-wheeler seems to cling to the road and rider so steadily and with little vibration. With an area of road contact 27 per cent. greater than that of two 12-inch pneumatics, the four eight-inch tires showed much better traction qualities. This was especially noticeable in comparison with dual solids or pneumatics on highly crowned roads and in soft going where additional traction surface kept the wheels from sinking in deeply and the truck from stalling. Increased ease in handling seemed to be one of the truck's most prominent features.

With the large saving in tire weight by the use of smaller pneumatics as a large factor, the total axle weight is greatly reduced in the new type of truck. Greater braking capacity is also obtained by this construction, four brakes being used instead of two.

The chief objection expressed by engineers to the use of 48 by 12-inch tires has been the extremely high center of gravity, the truck load being raised to an extreme height above the ground. This objection is entirely overcome by the use of the four smaller tires.



Goodyear Six-Wheel Truck of Five Tons Rating, Weighing 10,700 Pounds, with Load of 17,200 Pounds, on 40 by Eight-Inch Pneumatic Tires.

WOOD ASSUMES CHARGE OF GOODYEAR GOOD ROADS BUREAU.

C. M. Wood, formerly sales engineer for the H. W. Johns-Manville Co., and a man of wide experience in road engineering and highway construction, has assumed charge of the Good Roads bureau recently established by the Goodyear Tire & Rubber Co., Akron, O., and will devote his entire time to the campaign of agitation inaugurated by that company for the furtherance of good roads and highway construction throughout the United States.

Mr. Wood is a native of Texas. Graduating from Cornell university as a mechanical engineer, he followed engineering work in Mexico and the South and Southwest for eight years, the next 2½ years being spent in sales engineering work for a Chicago cement company. Prior to his affiliation with the Manville company he acted as department manager for the Portland Cement association.

Briefly the functions of the Goodyear Good Roads bureau as outlined by Mr. Wood are: To distribute reliable data on good roads and highways; to take an active part in good roads movements wherever possible by means of lectures, personal calls and advertising; to collect and investigate state and national highway legislation; to support financially and otherwise local good roads organizations as may be deemed expedient; and to prepare and issue pertinent literature for public distribution, covering good roads, their advantages and the details of financing road improvement and highway construction.

The bureau also will assist wherever possible by supplying reliable information on tire effects on roads and to devise road construction material of greater durability.

L. L. Heidacher, manager of the Memphis, Tenn., branch of the Firestone Tire & Rubber Co., Akron, O., is authority for the statement that that company intends shortly to open a branch in Arkansas, probably at Fort Smith.

Recent Promotions by Goodyear Co.

The following promotions have recently been announced by the Goodyear Tire & Rubber Co., Akron, O., in its sales organization: L. C. Gates has been made manager, H. E. Waldsmith branch manager at Akron, and K. H. Dresser branch manager at Newark, N. J.

Mr. Gates entered Goodyear employ in a clerical capacity in the assistant division of the automobile tire department in 1915, and in a short time was transferred to city sales work in the Philadelphia branch. His next step forward was to assistant manager at Philadelphia, followed in 1919 by an assignment as manager of the Dayton, O., branch, and his promotion to the management of motorcycle sales at Akron followed early in 1920.

Mr. Waldsmith's first connection with Goodyear was in 1915 as a special traveling representative in the bicycle and motorcycle tire department. In 1918 he was transferred to the automobile tire department, where he remained about a year. His next promotion was to the position of special representative calling on dealers and motorcycle manufacturers, and on July 1, 1919, he was given added recognition by his appointment as branch manager at Youngstown. In 1920 he was made branch manager at Akron.

Mr. Dresser first became connected with the Goodyear organization in 1912 as assistant manager of the mechanical goods department. A year later he was sent to Portland, Me., as branch manager, where he remained until April 1, 1915. His ability as an organizer was quickly recognized by his selection as branch manager at Springfield, Mass. In the summer of 1917 he was recalled to Akron to act as staff man on motorcycle tires. He was soon placed in charge of the cycle tire department and made so remarkable a record that on Jan. 1, 1918, he was sent to New York and the New England districts in connection with the company's second sale of preferred stock, in which he was exceptionally successful. Mr. Dresser was next attached to the manufacturers' sales department, with headquarters in New York, where he continued until he was made branch manager at Newark early in 1920.

GERHART WITH ARKANSAS RUBBER CO.

R. C. Gerhart, formerly of the Little Rock, Ark, branch of the B. F. Goodrich Rubber Co., has become financially interested in and one of the officers of the Arkansas Rubber Co., 614 Center street, that city. Mr. Gerhart went to Little Rock about two years ago and during his connection with the Goodrich Co. the business in that territory has shown a gratifying increase. The Arkansas Rubber Co. handles the Goodrich line of passenger car and truck tires.

Ajax Rubber Co. stockholders have ratified the plan for increasing the capital stock from $10,000,000 to $20,000,000.

L. C. Gates, Manager Motorcycle Sales, Goodyear Tire & Rubber Co.

STERLING TIRE CORPORATION DECLARES DIVIDEND.

At a recent meeting of the board of directors of the Sterling Tire Corporation, Rutherford, N. J., an initial dividend from the date of issue at the rate of eight per cent. a year was declared on the cumulative sinking fund, series B. preferred stock, par value $100, preferred as to assets and dividends; retireable at $110 and accrued dividends. Beginning with 1921, 10 per cent. of the net profits (after preferred dividends) will be paid into a sinking fund for retirement.

At the same meeting the regular quarterly dividend of 1¾ per cent. was declared on the seven per cent. preferred stock and one per cent. on the common stock for the quarterly period ending March 31.

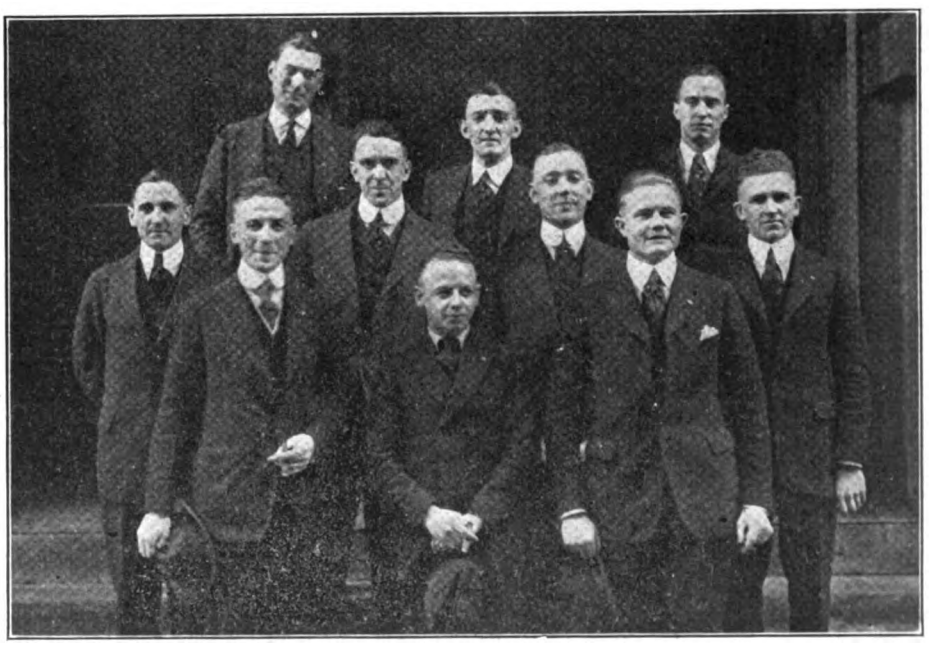
Visitors Welcomed at Goodrich Plant

THE B. F. Goodrich Rubber Co., Akron, O., believes that almost every person is a potential purchaser of Goodrich products and so confident is it of the efficiency of its manufacturing policies that it invites the general public to see for itself how Goodrich products are made and how scientifically the company treats its factory problems.

Ever since 1914 this company has been giving thought and attention to this feature of good will promotion. It realizes that a large part of the public is interested in acquiring facts about the various items of the every day merchandise it purchases. This information should be made easy for it to acquire. There are two ways in which the purchasing public can become informed, viz., by seeing for itself, or by learning from the retail seller.

The Goodrich company lays particular stress on the work of showing the dealer just how its product is made, so that he, in turn, may pass the information along to the ultimate purchaser. While all visitors are welcomed the Goodrich latch string hangs out particularly long to the dealer. Whether coming singly, in pairs, or in large groups—wholesale and retail merchants are always welcomed.

Thousands of visitors go through the Goodrich factories every year, a glance at the register showing names from Argentine, Brazil, Panama, Peru, Colombia, Hongkong, Calcutta, Calgary, Nome, Toronto, Ottawa, and in fact, from almost every country on the globe and from every state in the Union. Among the large groups which have recently made visits to the factory were the Foreign Trade commission, which recently made a tour of the United States; the Oklahoma Chandler dealers and the Cleveland Automobile Manufacturers.



Group of Guides at Factory of B. F. Goodrich Rubber Co., Akron, O.—Left to Right, Bottom Row: J. M. Grey, C. L. Carl, A. L. Jordan. Left to Right, Middle Row: E. J. Lutz, W. G. Dellabough, J. R. Beattie, C. R. Miles. Left to Right, Top Row: D. W. Fairleigh, J. J. Cregen, M. Kennedy.

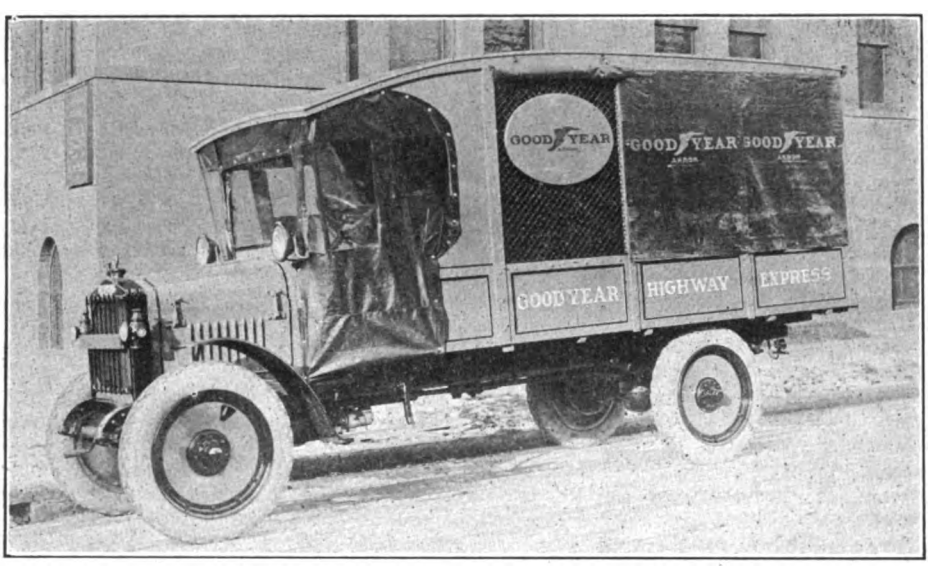
Goodyear Rim and Wheel Plant

In line with its policy of expansion, the Goodyear Tire & Rubber Co., Akron, O., has started on the construction of a rim and wheel plant at Akron, to have a capacity of 10,000 rims and wheels a day. The new factory will be a one-story brick and steel structure, 250 feet wide and 660 long, and will accommodate 500 workmen. It will be built on a portion of the 200-acre plat located on the Baltimore & Ohio railroad, so that it will have ample transportation facilities.

It is expected that the new rim factory will be completed about July 1, at which time the present rim department, which has a daily capacity of 600, will be transferred to it.

The remainder of the 200 acres will be used for storage warehouses and for the erection of large cantonment buildings, similar to those used by the United States government at Camp Sherman, Chillicothe, O., for the training of soldiers. Twelve cantonment buildings will be used as slepeing quarters, each building to accommodate 80 men. Other buildings will be used as kitchens, dining rooms and recreation halls. It is expected that these cantonments, built to house 1000 men, will be ready for occupancy by June 1.

The new rim plant and cantonments will be of the latest type of construction and when completed will give Goodyear one of the most modern rim plants in the country.



Acason 1½-Ton Truck, with Pneumatic Tire Equipment, Operated by the Goodyear Tire & Rubber Co., from Its Providence, R. I., Branch.

REMARKABLE GROWTH OF TIRE INDUSTRY.

According to the B. F. Goodrich Rubber Co., Akron, O., 85,000 tires a day—one every second—are now being made in that city, 25 per cent. more than a year ago.

During 1910 4,000,000 tires were manufactured in Akron. By 1915 the annual production had increased to 7,000,000, and by 1919 to 20,000,000. If the present production is continued throughout the year, 28,000,000 will be manufactured, approximately four tires for every passenger car and truck now in use.

The remarkable growth of the rubber industry has caused Akron to increase rapidly in size. In 1910, when the rubber industry employed 13,600 persons, Akron had a population of 69,067. Today the rubber companies employ 97,500 persons and the population of the city is estimated at 230,000.

Akron rubber manufacturers are making large additions to existing plants in the effort to bring production up to the demand, and when these extensions now under way are completed, the daily production will pass the 100,000 mark.

LONG-WEAR RUBBER CO., ELYRIA, EXPANDS.

The Long-Wear Rubber Co. of Elyria, O., has changed its name to Long-Wear Tire & Rubber Co., has increased its capital from $500 to $5,000,000, divided into $700,000 preferred and the balance common stock, and has absorbed the business of the Quality Tire & Rubber Co., Anderson, nd.

The general offices have been moved to Anderson and a large addition to the Elyria plant is being contemplated for making cord tires. Under the new arrangement the Elyria plant will have a capacity of 300 Long-Wear cord tires a day and the Anderson plant 1000 fabric tires and 2000 tubes a day, in addition to the complete line of Anderson Quality fabric tires and special brands for jobbers.

VON ALBERT LEAVES TIRE CO.

The Motor World Tire Co., manufacturer and distributor of Globe Cord-Fabric and Standard Four tires, inner tubes, accessories, etc., Grand Rapids, Mich., announces that A. P. Von Albert has severed his connection with that company and its subsidiaries.

Good Field For Repair Man

Giant pneumatics for trucks provide a lucrative field for the repair shop of the future, in the opinion of Firestone engineers who have been studying methods by which maximum mileage may be obtained from these big tires. Steadily increasing use of the pneumatic tired truck has created a need for adequate repair methods and tire men predict that in a short time the tire shop that is not equipped to handle this kind of work will be the exception. Already dealers are evincing a great interest in the progress that is being made because they realize that increased mileage made possible through economical and durable repair work will mean increased sales of pneumatic tires for trucks.

Equipment for work on the big sizes of tires has not been available in large quantities, but the tire companies and equipment manufacturers have been working hand in hand and assurance is given that a general demand for equipment soon can be supplied.

Firestone engineers have been experimenting on giant pneumatic repairs and see nothing to prevent effective results by any competent repair shop. The methods to be used are in no way a radical departure from those used in making repairs on the smaller sizes of cord tires.

For sectional repairs two general methods are considered practical:

Where the tread is only slightly damaged and the fabric not badly separated an inside cord patch and an outside tread patch will be found effective.

For large sectional repairs the outside should be built up in a manner similar to that used in building up a section of a smaller cord tire and the repair should be reinforced by an inside cord patch. If the tread is in good condition it may be laid back while the section is being rebuilt. If not, it should be replaced by a section of non-skid, semi-cured tread band.

For retreads, use of the semi-cured, non-skid retread band is recommended and the raised cure has been found to be effective.

Either sectional or dry cure molds may be utilized in vulcanizing the repair. The cure, in most cases, must be of longer duration than it is in repairing the smaller sized tires, the time depending largely on the size and nature of the repair.

555 TIRE & SERVICE CO.

Roy E. Stueber, manager of the 555 Tire & Service Co., has signed a lease for the two-story brick fireproof building being erected on the 140 by 150-foot lot on the northeast corner of Third and Broadway, Little Rock, Ark., by the Shoemaker-Bale Automobile Co., to cost approximately $100,000.

The 555 Tire & Service will maintain its present service station at 1100 Main street, in addition to the new building.

Up-to-Date Methods of Vulcanization and Tire and Tube Suggestions

CAN your worn or injured tire be successfully repaired? To this vital question experts of the B. F. Goodrich Rubber Co.'s tire repair school answer "Yes." But if you asked these same experts whether the average tire is always efficiently and successfully repaired, the answer is immediately reversed.

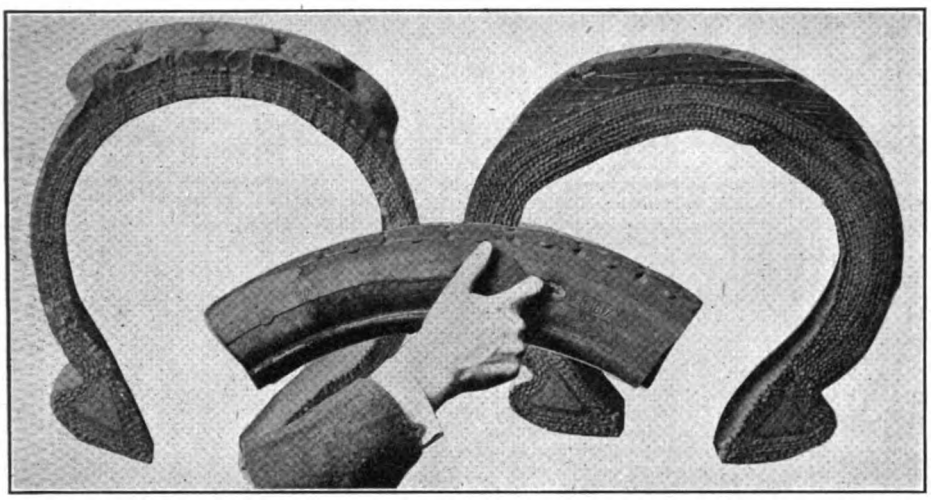
Careless and unscientific repairing, the Goodrich company points out, is responsible for the loss of hundreds of thousands of dollars to American car owners each year. And to this should be added the loss incurred by neglected repairs—tires thrown away whose life could have been prolonged.

What is the most frequent mistake made by repair men and how avoided? The reply is: Failure to remove worn fabric from injured portion of the tire and the practise of adding rather than replacing layers of fabric.

The accompanying illustrations tell the story. Here are shown three views of a four-inch, five-ply fabric tire which was repaired by adding eight plies of new fabric to the tire's five plies of worn fabric. After running a few hundred miles the tire blew out. The motorist went to the repair man, who said: "Why, the blow out occurred 15 inches from the repaired part. The tire originally was defective." The car owner then laid the blame on the manufacturer.

The truth is the repair man and not the tire was at fault. This is what actually took place: The eight plies of extra fabric was found, upon examination, to extend to the point of the blow out. In running a "hinge" was formed at the merging point of the five and 13-ply sections. The "hinge" constantly worked back and forth, thereby overworking and weakening the fabric. A blow out resulted. The eight added plies had formed a stiff unresisting section that refused to work in harmony with the rest of the tire.

The smaller picture shows a tire stripped back in the approved factory method of repair. All except enough fabric for a foundation has been removed. The fabric is removed by steps, thereby avoiding a sharp break between the old and the new fabric. New fabric replaces and is not added to the old, worthless fabric. Then the repair man should begin the process of building up, using the best materials obtainable, including high grade cements, sheets of raw rubber and new rubber impregnated with cotton fabric.



Left—Hand Sketch Is a Cross Section of Tire Showing Five-Ply Construction. On Right—After Repair, 13 Plies Instead of Five—Old, Worn Fabric Is Still in Tire. Center Sketch Shows Where Blow-Out Occurred—at Merging Point of Five and 13 Plies.

(From Goodyear News.)

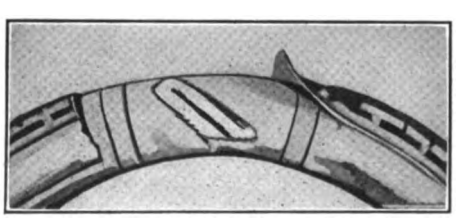
FROZEN TREAD STOCK CAN BE USED.

An Iowan asks if tread stock which has been frozen is still good for use. Frozen stock may be used satisfactorily by thawing it slowly in a warm room. The fact that it has been frozen should not in any way injure its quality. However, if the stock is old, freezing will have some effect and it will lose some of its tacky properties, perhaps causing it to bloom to some extent.

OLD CASING MAKES GOOD VULCANIZING BAG.

To solve difficulties experienced with sand bags used in third-circle vulcanizers for retreading, a Colorado firm took an old casing and stripped it down as one would in making a reliner and cemented the edges together with two strips of uncured fabric. These were cured on the tube plate and the ends closed by riveting or sewing. The bags were then filled with sand or ground cork.

The advantage in using this sort of bag is that it is the same size as the casing to be cured and fits snugly.



Section of Tire Showing Proper Preparation for New Fabric Layers.

SEVERAL REASONS FOR BULGING OF REPAIR.

A Massachusetts shop asks what is the cause of the repaired place on a job becoming larger than the rest of the carcass in a sort of a bulge. There are a number of possible causes for this condition and among these the most probable are: Dirty stock, undercuring, oil in gasoline or solvent or foreign matter in the casing itself.

SAVING THE HOLLAND.

Saving the holland which comes from the raw gum has been found practicable in a western shop. It is sent to the laundry and the starch washed out. The soft cloth makes an excellent cleaner for casings.

Holland also makes a good cover for the tube plate, prevents sticking and the rubber flows better, making a smoother job.

FORMULA FOR PAINT IN CASINGS.

A Michigan repair man asks what are the ingredients for a good paint for coating the inside of casings after they have been retreaded. One of the simplest is to mix soap stone, C-35 cement, gasoline or some other solvent and work to the consistency of house paint. Apply a thin coat.

TO PREVENT DISCOLORATION.

A query received recently asked what makes white tread tires turn black during vulcanization. The answer is that the sulphur is drawn to the outside by excess heat or the length of cure. The way to prevent this condition is to place a moist cloth over the surfaces to be cured.

PASTE FILLER FOR TREAD BUTTONS.

A Quincy, Ill., repair man writes for a pad or paste filler to use around the buttons on the retread band when working with a Wilkinson third-circle dri-cure machine in curing all-weather treads. The best pad is made of a paste of plaster of Paris and wood pulp.

TOBACCO SACKS FOR TUBE REPAIRS.

These can be made from small tobacco sacks filled with sand. They equalize pressure nicely and do not mark the tube as much as wood blocks.

FISK CORD TIRES

THE commercial advantage in being able to deal *direct* with the manufacturer is instantly plain to any dealer who enters into relations with Fisk; and the advantages arising from the fact that there is a Fisk Branch within *quick* reach of any dealer are also seen immediately by any dealer who studies the field.

The *completeness* of the Fisk line frees the dealer from the necessity for carrying "fill-ins."

The Fisk Ideal is: "To be the best concern in the world to work for, and the squarest concern in existence to do business with."

Next Time—BUY FISK

Function of Auto Motor-Generator Brushes

(From the National Carbon Co., Cleveland, O.)

PERHAPS the least understood of any of the parts of the starting and lighting equipment are the brushes. The brush is the connecting link between the stationary and revolving elements of both motor and generator. The generator is directly connected to the automobile engine and, therefore, the armature revolves continuously as long as the motor engine itself is in use. The brush on the generator is, therefore, subject to wear continuously as the automobile engine operates. In the case of the starting motor, which is used intermittently only a few times a day, the brush is subject to wear only during such intervals. The current delivered by the generator averages between eight and 10 amperes, so that the carrying capacity is not so important as the characteristics required of the brush. On the other hand the brush on the starting motor must withstand a current density of at least 150 amperes for short intervals.

There are several other qualifications on different kinds of motors and generators which call for specific grades of brushes with definite physical and electrical characteristics. Carbon brushes answer the general requirements for a brush for the lighting generator or for the starting motor, but depending upon the type of machine and the conditions under which it is used, the manufacturer is able to recommend just the right kind of brush to be used. Carbon has a low coefficient of friction, and can be made with a negligible amount of abrasive material so that the wear on the commutator is practically nil. In order to carry the high current required for starting, the brushes on this unit should be made of part metal and part graphite. Copper brushes with a very small percentage of graphite are usually used, and answer the general requirements.

The motor and generator that has a single unit system offer a considerably different problem as far as brush manufacture is concerned. In this unit we must combine carrying capacity with low friction and low contact drop in order that the brush may fit the requirements of generating a small current continuously and also be capable of carrying the high current required for starting. Metal graphite brushes answer the general requirements for the single unit system as well.

The National Carbon Co., Inc., manufacturing the Pyramid brand automobile brush, has made an exhaustive study of the brush requirements of the various types and makes of electrical systems for the motor. There are nearly as many types and makes of starting motors and lighting generators as there are different types and makes of automobiles. Consequently in order to supply brushes for all makes and types of starting and lighting equipment it was found that approximately 350 brushes of slightly different design were necessary. Many of these brushes are made with shunts attached which fit only one particular style of starting motor or lighting generator. As a general rule the brushes intended for box type motors are fitted with shunts, while those intended for the arm or clamp type motors do not require shunts. Each brush manufactured by the National Carbon Co., Inc., is stamped with the Pyramid trade mark wherever physically possible.

In order to facilitate the garage, repair man, or the electrical dealer who handles automobile equipment, including the sale of motor or generator brushes, the National Carbon Co., Inc., supplies various assortments of brushes in neat containers. These assortments vary according to the clasisfication of popular cars which are to be found in different parts of the country; hence, if a dealer knows just what cars his trade is coming in contact with, he can order in assortments which very nearly fit his requirements.

All that is necessary for the dealer to do is to refer to the chart on the back of each assortment, which gives the name of the car, the starting motor or lighting generator used, and the number of the brush which should be supplied for renewals. In view of the large number of cars on the market and the fact that Ford cars are now equipped with starting systems, everything points to a very large field of business in supplying brush renewals.

ALL-WAY OILER DISTRIBUTED BY FAMASCO CO.

The Famasco Distributing Co., 694 Main street, Buffalo, N. Y., is marketing the new All-Way oiler, which is designed especially to make readily accessible the places that are hard to get at with the ordinary oiler. It has a flexible spout which is claimed to be practically unbreakable and can be bent to reach places that cannot otherwise be properly oiled. At the same time it has a patented cleaning device that keeps the spout from clogging up with grease and dirt. By pressing the spout downward a wire protrudes through the nozzle, making a clean passage for the oil. It is stated that only the very best flexible steel tubing is used, built up on a base of asbestos. The spouts are treated with a solution that positively prevents rusting. It is also said that not only is the All-Way oiler more useful than the ordinary oil can, but is more durable, being built to last a life time.

JAMES SUPPLY CO. ENTERS ACCESSORY BUSINESS.

The James Supply Co., 1104-1112 Market street, Chattanooga, Tenn., has recently entered into the automobile accessory business on a strictly jobbing basis in a large and systematic way, having been appointed refiner's distributor for Wolf's Head oil, among other automotive accessories and equipment.

ADPASCO PREPARED PAPER FOR GASKETS.

The Advanced Packing & Supply Co., 20 North Franklin street, Chicago, Ill., is finding a ready market for its Adpasco treated gasket paper. This is a sheet product, 36 by 40 inches, and of substantial weight, about 12 ounces to the sheet. It is guaranteed to be water proof and oil proof to the highest degree. Its use does away with make-shifts in the form of wrapping paper, etc., and also relieves the mechanic from resorting to the expensive habit of using asbestos packing instead of looking around for suitable paper packing. The Adpasco prepared paper saves both time and money for its users.

Another quality product being marketed by the Advance Packing & Supply Co. is Tenax compressed asbestos sheet packing. The company points out the impracticability of shop owners trying to keep a stock of gaskets on hand, with new sizes appearing on every new engine.

Tenax has been on the market for 20 years and has enjoyed an increase in sale in proportion to the increase in the use of automobiles, tractors, trucks and gas engines. It is said to be practically indestructible, resisting temperatures that turn iron to a thin liquid and stands up permanently against the action of commercial acids, superheated steam, oil, etc.

It is due largely to the Tenax standard of quality that the mechanic has developed confidence in his own hand-made gasket. Tenax not only stands up indefinitely, but also trims easily, requires no following up and does not squeeze out of the joint or "fry" under extreme heat.

Tenax is made in sheets 50 by 50 inches and in thicknesses of 1/32 to 1/8 inch inclusive. Also a 1/64 inch sheet, black graphited, is supplied. The standard color is blue and it is known under the slogan "The Original Blue Sheet."

DEATHE REPRESENTS FULTON CO. IN EAST.

The Fulton Co., Milwaukee, Wis., manufacturer of automotive equipment, announces that it has secured the services of Harry M. Deathe, Oxford, Pa., formerly of the Hill-Smith Metal Goods Co. and J. H. McCullough & Son, as a selling representative in the East calling on the trade in the states of New York, Pennsylvania, Maryland, the District of Columbia and the New England states.

BROWN CO. ERECTING BUILDINGS.

The Brown Instrument Co., Philadelphia, Pa., maker of pyrometers, thermometers, tachometers, indicating and recording instruments, etc., is erecting two new buildings, one for the exclusive manufacture of recording thermometers, the second to house the research department, at a cost of $100,000. These increased facilities will enable the company to materially augment the output of Brown pyrometers and recording thermometers.

Take Care of That Glare

And Make the Road Safe for Others as Well as Yourself

The Osgood Lens does a lot more than merely stop glare; it gives you a brighter, clearer light and more of it—out onto the road ahead of you *and downward*, right where you need it.

THE NEW

OSGOOD LENS

CRAVATH LONG DISTANCE TYPE

throws a powerful light one-third of a mile ahead of the machine and never more than waist high. It makes the road just as safe for others as it does for you and solves absolutely the safety-problem of night driving. Another thing, with the Osgood Lens, there is absolutely no need of dimmers.

DEALERS: There's more lens-profit in handling the Osgood, than in all the rest of them put together, and you get rid of having to carry all sizes of other lenses. Osgood outsells them all, because they do the business. Complete stocks of all sizes now ready for instant deliveries. Write us today.

Prices $2.90 to $4.50 According to Size.

NIEHOFF CO. INCREASING PRODUCTION FACILITIES.

Paul G. Niehoff & Co., Chicago, Ill., has again found it necessary to extend its production facilities to meet increased demand, and has taken over the plant of the Northern Machine Co. with its entire equipment at 341 East Ohio street, Chicago, and has leased the premises, in addition to its present location at 232-242 East Ohio street.

The Niehoff Co. is going rather extensively into the production of a new line of various kinds of electrical testing instruments and garage equipment for the automotive trade. Some of these instruments are already well known, such as the Defectometer for testing magnetos, Generometer for locating shorts and grounds in the generator and starting motor armatures, Test Kart, a novel and portable outfit which will make a complete test of every known electrical system; Test Bench for the testing of magnetos, generators and starting motors under the same condition they would be subjected on the car, Ford Mag-Charger, for recharging Ford magnets on the car as well as for making tests on other electrical equipment.

ANNUAL MEETING OF DURSTON GEAR CORPORATION.

At the annual meeting of the Durston Gear Corporation, Syracuse, N. Y., R. M. Bean, sales manager, and A. C. Bryan, factory manager, were elected directors and vice presidents of the corporation, both men having been associated with the concern since 1913.

This company is the outgrowth of the Lefever Arms Co., which made the Lefever shot gun. In 1916 the gun business was sold to the Ithaca Gun Works, Ithaca, N. Y., and the company was reincorporated as the Durston Gear Corporation. The following, who were the sole owners of the old Lefever Arms Co., were re-elected to their respective offices: President, A. H. Durston; first vice president, M. H. Durston; secretary and treasurer, J. F. Durston.

The Durston Gear Corporation is now operating its plant with a day and night shift and employs 400 men, which number will shortly be increased to 600.

A REAL FORD STABILIZER.

The Green Sales Corporation, 99 State street, Boston, Mass., is marketing the D & O Safety Steering Control, which is manufactured by the D & O Co., Boston. With this device attached to the steering mechanism of the Ford car a perfect shock absorber is afforded, which is stated to relieve all driving strain, and is guaranteed by the designer to overcome all steering danger and difficulties. It is claimed that by holding the front wheels in alignment, the steering control effects a very material saving on tires, bearings and steering parts.

The beneficial action of the D & O Safety Steering Control is due to the coil springs, which form a principal part of the device.

Representatives of G. Norman Baughman Co. In Convention at Tampa, Fla.

THE G. Norman Baughman Co., which is stated to be the largest exclusive jobber and distributor of automobile supplies south of the Mason and Dixon line, with main offices at 610-620 Tampa street, Tampa, Fla., and branches at Jacksonville and Miami, recently held a well-attended and successful five-day convention of its salesmen and customers. A number of prominent northern manufacturers were also present as special guests of the Baughman Co.

The first day, Thursday, was customers' day and the 1500 dealers representing the company in Georgia, Florida and Cuba received invitations and attended to the number of about 500. Practical demonstrations were given of the various lines of equipment which the Baughman Co. represents, among them being the Globe Manufacturing Co., air compressors; the Stromberg Manufacturing Co., carburetors: Champion Spark Plug Co; American Ever Ready Works, flash lights; Weaver Manufacturing Co., garage equipment; Johns-Manville Co.. J-M brake lining and other products; McQuay-Norris Co., piston rings; Starr Tire Co., Shaler & Haywood, vulcanizing equipment; Tide Water Oil Co., Veedol oils; Las-Tik Patch Manufacturing Co., tire patches; Long Distance Spark Plug Co., Sharp Spark Plug Co., and Edgar C. Guthard Co., Billmont wrenches.

Thursday afternoon the Baughman Co. entertained its guests at the Tampa fair and in the evening at a banquet at Garcia's.

The second and third days were devoted especially to manufacturers, and the programme included brief addresses by the following: Mr. Rurack, Champion Spark Plug Co., Toledo, O.; William Cooper, Casco Manufacturing Co., maker of "Hold-'em-in-the-Road;" J. P. Coyne, American Ever Ready Co.; Mr. Whaley, Weaver Manufacturing Co.; A. J. McLean, Johns-Manville Co.; L. A. Safford, McQuay-Norris Manufacturing Co.; M. E. Haywood, Haywood Vulcanizing Co.; R E. Stuntz, Stromberg Manufacturing Co.; S. A. Fulton, Fulton Co.; V. V. Casey, Northwestern Chemical Co.; Charles H. Hathaway and John Colley, Badger bumpers and Apco accessories; William Hooker, Sharp Spark Plug Co.; T. S. Stinson, National Carbon Co.; F. W. Wilbur, Globe Manufacturing Co.; E. C. Hart, American Chain Co.; G. L. Bourveau, Paul Niehoff and Jefferson Electric Co. on electrical equipment; E. L. Canton, Tide Water Oil Co.; Walter Jarrett, Miller Rubber Co.; E. B. Byerline, Las-Tik Patch Manufacturing Co.; Tom Alford, Long Distance Spark Plug Co.; H. Witherspoon, Edgar C. Guthard Co.

Friday evening a banquet was given at El Boulevard cafe for the manufacturers' representatives.

Sunday, the fourth day, all employees of the Baughman Co., the manufacturers and their wives were conveyed in 22 automobiles to the country place of Dr. St. George Fechtig, known as St. George's, near Sutherland, Fla., on the west coast. The accompanying picture was taken here in an orange grove just before the annual dinner. The luxurious tropical vine shown is known as the Bignonia. The principal speakers at this dinner were George W. Perkins, formerly vice president of J. Pierpont Morgan & Co., and Dr. L. A. Bize, president of the Citizens-American Bank & Trust Co. of Tampa. In the afternoon the party enjoyed a dip in the gulf at Clearwater and at night a party of about 30 left St. Petersburg for a fishing trip in the gulf Monday.

Representatives and Guests of G. Norman Baughman Co. at Annual Dinner at Sutherland, Fla.

This is reported to have been one of the most enjoyable and helpful get-together events in the history of the industry in the South.

SECURITY AUTO LOCK.

The Security Auto Lock Co., 410 North Paulina street, Chicago, announces that its suit against the Berry Auto Lock Co. and Ira D. Perry in the Federal court has been won, and that according to the decision of Judge Landis, the patents of the Security Auto Lock Co. are valid. and that it is entitled to damages, royalties, profits and costs due to infringement.

An Auto Fuse Service That Makes Friends of Your Customers

Quick and correct service is always appreciated by your customers—that's why so many accessory dealers are now specifying the

Killark No. 700 Banner Auto Fuse Assortment

"A Complete Auto Fuse Department In One Unit"

Here are ten reasons why you, too, should sell Killark Banner Fuses:

1. 100 best selling fuses packed in eleven small cartons. Amperage marked on each carton
2. Attractive cardboard counter display container holds the cartons.
3. Complete directory, showing fuse requirements for every car, on cover of container.
4. Each fuse is electrically perfect. Strong—accurate—dependable.
5. Assorted in sizes to meet every demand
6. All live sellers—no dead stock.
7. No need to buy fuses in large quantities. Extra fuses can be ordered in any quantity.
8. Insures quick and accurate service to customers.
9. Only small investment required.
10. Liberal profit for the dealer.

If your jobber hasn't Killark No. 700 Banner Auto Fuse Assortment in stock, send us his name with your order.

The Handy Spotlight On a Reel

Autoreelite is a convenient and powerful spotlight with the added advantage of a self-winding cord on a reel. By two twists of the thumb and finger, Autoreelite can be reeled out to a distance of twelve feet.

There is a ready market for this combination spotlight and trouble-light. Motorists appreciate its usefulness for making repairs on the road at night. And Autoreelite is priced no higher than ordinary spotlights.

THIS Year, Sell Reflex Spark Plugs
because of what they HAVE done.

—because of the business and profit they meant for Reflex dealers throughout 1919.

BUSINESS, due to such service as the above illustrated plugs delivered in a rough-road-going truck. And "without attention," writes the user—a mid-west trucking establishment.

PROFITS, because prices, discounts and guarantees to you are right.

Simply drop a card for complete information, such as prices, the Reflex advertising campaign, dealer helps, etc.

GARDNER AIR PUMPS

Result of 50 years manufacturing experience.

An inefficient air pump makes your air service expensive. It hurts the quality of your service.

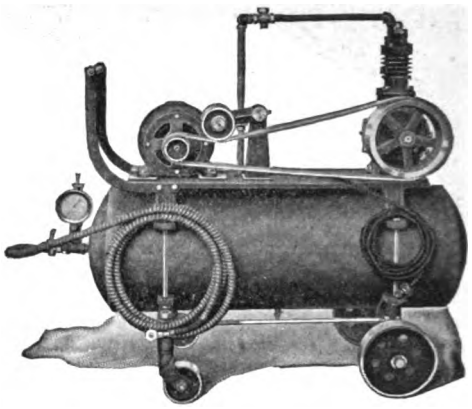
Makes a customer dissatisfied and hurts your business generally.

Install a GARDNER

It will pay for itself in a short time.

It is simple, rugged and efficient.

The fact that many filler stations supplying hundreds of car owners daily use the Gardner air pump is proof that experience had demonstrated it is economical.



GARDNER AIR WAGON

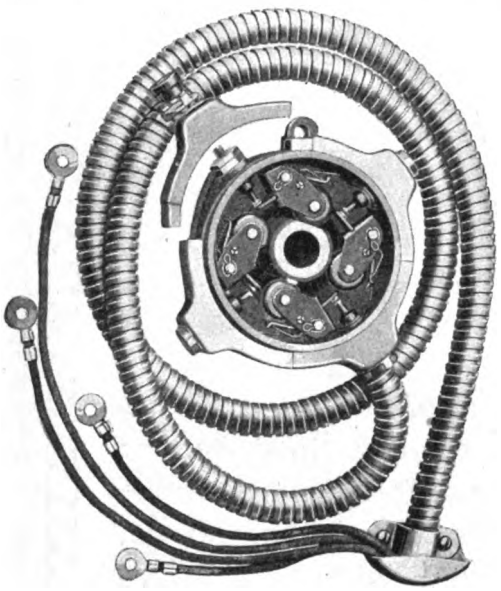
Everlastingly Guaranteed *To Always Make Good*

DUNTLEY MAGNETO BREAK TIMER



Showing Guard and Timer Combined.

Every time a cylinder misses fire 25% of the gas goes out the exhaust unused and wasted.

The Duntley puts a positive stop to this unnecessary loss, for the Duntley never misses.

SAVES GAS *ADDS POWER*

The constant make contact and the clean break of this super-timer shoots a big, strong flaming spark over the wires into each cylinder that ignites every particle of gas.

Its supreme performance not only means a saving of gas, but a tremendous increase in power.

Wire and Terminal Guard

Although the timer operates at a maximum of efficiency, broken wires, loose connections and short circuits utterly destroy the efficiency of the entire ignition system.

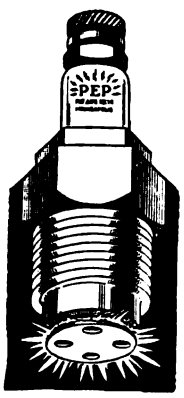
POSITIVE PROTECTION *ALL THE TIME*

The Duntley wire and Terminal guard entirely eliminates the trouble makers, for it affords absolute protection to the most vital part of the ignition wiring system.

By its use the wires from the coil box to the timer are encased in a flexible metal conduit and the timer is protected by metal armor.

DEALERS: Write us today our proposition is interesting.

J. W. DUNTLEY, 1003 Michigan Ave., Chicago



Retail for $1.00.

Far More Sparking Surface

BETTER combustion, easier starting, snappier motor action, result from the ring of fat hot sparks yielded by the Pep plug. The perforated disk covering the lower end of the Pep plug gives two inches of sparking surface.

This is just one of the features which make users boost for Pep Spark Plugs giving dealers better turnovers and better profits. Let this fast moving plug add to your business.

"Your Money Back If You'll Take It." No strings to this guarantee.

A. J. STEPHENS
President
A. J. STEPHENS RUBBER CO.
Capitalized $1,5000,000.00

DEALERS—My New Selling Plan
Will Increase Your Daily Profits $50 or More

No matter where you are located, nor how much competition you have, I can show you a most extraordinary selling plan that will actually add from $1,000 to $1,500 monthly profits to your business. This is no experiment. Hundreds of enthusiastic dealers throughout the country are using my selling plan and enjoying big profits. *J. W. Neal of Sedalia, Mo., sold over $6,000 worth of Stephens Products in less than a month. F. F. Swinson, Pratt, Kans., made $400 profit in 5 days. Reinhart Motor Co., Ottawa, Kans., sold over $2,000 worth of Stephens Tires in 10 days. McDavid Bros., Excelsior Springs, Mo., made over $300 profit in 4 days.* I can refer you to hundreds of other dealers who have done as well. This is the best proposition ever presented to you.

I Will Bring a Steady Stream of Customers Into Your Place of Business

By using big advertisements in your local paper, showing your name as distributor for STEPHENS TIRES and accessories, I will bring you business that you never hoped to get. My plan is to do this advertising without cost to you. My plan is to increase your business without increasing your overhead, in other words, to *positively guarantee* the sale of our products. Not a cent is required until I prove my claims to you. Write me today for all information. Learn the facts, then judge for yourself as to the money-making possibilities.

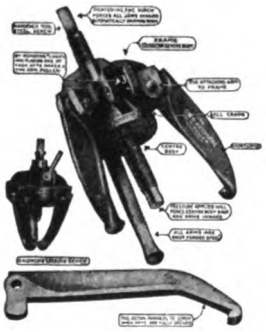
GREB AUTOMATIC GRIP PULLER
BEACH PATENT

"The One Best Bet" in Wheel, Gear and Bearing Pullers. Combinations of two or three jaws. Quick, Strong, Durable, Efficient and Simple. Positive Grip, cannot unhook and adjust to work instantly.



Greb Automatic Grip Puller

East of Rockies

Greb Arbor Press Base—designed to be used with the three long jaws of No. 1 Puller. Comes complete with two V Blocks and one V cap. Makes desirable equipment for pressing off gears, bushings, bending pipes, straightening shafts, etc. It is a good Bench Plate. Width 14 in., Depth 8 in., Diameter of Center Opening 3 1/2 in. Weight approx. 60 lbs. **Price complete $15.50**

No. 1 Senior Size—designed for heavy work—a one man Puller with a locking device. Capacity 3 to 18 in. Complete with two sets of jaws, 7 in. jaws open to 10 in., and 12 in. jaws to 16 in. Screw of hardened steel, 1 in. diameter, 16 in. long. (See Arbor Press Base Attachment.) Shipping weight 30 lbs. **Price complete $25.00**

No. 2 Junior Size—designed for all types of motors. Will remove magneto and pump shaft gears, couplings, etc. An efficient tool for all small work. Capacity 1 to 7 in. Complete with two sets of jaws 3 1/4 in. jaws open to 4 in. and 6 in. jaws to 7 in. Screw of hardened steel, 9/16 in. diameter, 2 1/2 in. long. (See Bearing and Race Attachment.) Shipping weight 4 lbs. **Price complete $12.00**

No. 3 Intermediate Size—designed to pull the average motor gears such as timing, pinion, transmission, differential, and crank shaft gears, gudgeon and universal joints, pulleys, and for general work. Capacity 1 to 12 in. Complete with two sets of jaws, 5 in. jaws open to 8 in., and 9 1/2 in. jaws to 12 in. Screw of hardened steel, 7/8 in. diameter, 10 in. long. (See Gear Attachments.) Shipping weight 15 lbs. **Price complete $18.00**

Greb Bearing and Race Attachment for No. 2 Puller has a Knife edge and can be forced behind magneto, electrical generator and self-starter bearings and races where it is impossible for the jaws of any Puller to be attached. This attachment when used back of small gears and bearings not only saves them but the ends of the Puller jaws as well. Capacity—Bearings and Races up to and including 2 in. **Price complete $4.00**

Greb Gear Attachment for all sizes of Greb Pullers has a 1/8 in. edge and can be forced behind gears where there is little or no room. This attachment when used back of small gears furnishes something for the jaws to get hold of and as it lays flat against the back of the gear it permits an even pull. Made in two sizes. Small size has capacity to take gears up to 3 in. on its front and 4 1/2 in. on its back. **Price complete $5.00**

Large size has capacity to take gears up to 4 in. on its front and 6 in. on its back. **Price complete $6.00**

Ask your Jobber or write us.

Improved Bemus Ball Contact Timer for Fords

Easier Starting—Smoother Running—Longer Life—Saves Coil Points

The IDEAL TIMER because form of contact is the only one which is correct both electrically and mechanically. This is made by a hardened tool-steel brush coming in contact with steel balls which are kept in proper position by means of a spring with plug on the end pressing against them. The impact of the brush causes the balls to turn so that a fresh surface is presented for each contact. The brush comes in contact only with the four balls, touching no fibre or insulation. The balls are so located that each has a track of its own on the brush, this insuring a maximum amount of wear.

Price, $3.00.

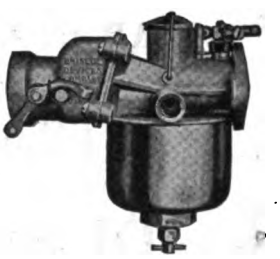
SCOE CARBURETOR

For Ford, Maxwell, Briscoe and Dort Cars

MAKES A FORD RUN LIKE A SIX



SAVES ITS COST IN 60 DAYS

Any dealer can send to us for a Scoe Carburetor, assured in advance that his customer will not ask his money back. Scoe Carburetors don't come back. Their owners are satisfied users.

More than that, they are actual boosters and send new customers to the dealer.

It would be worse than folly for us tc say these things to you if they were not true.

This carburetor embodies no new or untried principles.

Its makers simply recognize the fact that speed and power and smoothness are all dependent upon a correct mixture, and have devised simple means to provide a correct mixture—not sometimes, but ALL the time.

Let us send you a Scoe on 30 days' trial. Pay half the net—$4.25—on receipt of Carburetor. Put it on a customer's machine and check its performance for 30 days.

Then pay the balance or ask for refund and we will make it without question.

The Instrument for the Average Garage

Stop Guessing—Know The Truth

Equip your Garage with the

Weston **Model 441**

"Fault Finder"

and give your customers the kind of service they demand. It means business for you.

The "Fault-Finder" is a Voltmeter and an Ammeter mounted in a durable, compact and convenient carrying case. The Voltmeter ranges of 0.2-0-3 and 2-0-30 volts enable the user to test out every part of the electrical equipment for practically every trouble. The Ammeter range of 30-0-30 amperes is right for determining charge and discharge rates for adjusting relays, etc. The Ammeter is protected against burn-out by a standard automobile type fuse accessibly located. Long rubber-covered flexible cables with spring clip terminals are used for making connection between the instrument and the apparatus under test. A complete Instruction Book accompanies each instrument.

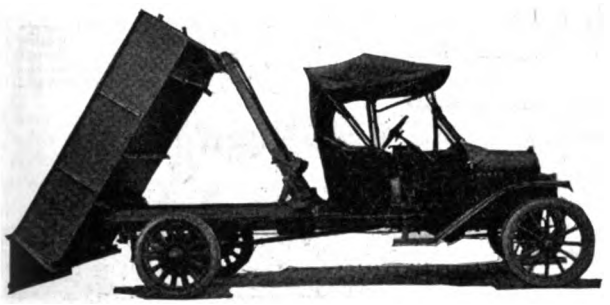
THE PEERLESS HAND HOIST

Single Cable Quadruple Worm Gear Drive

For Any Make or Type of Truck.



A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

We specialize in building all-steel bodies for any need.

Write for complete information.

Positive Proof of How It Fires

Show Him The Famous "Lead Pencil" Test

This simple demonstration instantly convinces even the most skeptical motorist that **Twin Fires** banish all troubles with spark plugs.

Take any lead pencil and conveniently prove that **Twin Fires** gives two independent sparks—entirely different from any other spark plugs.

This test will prove that with **Twin Fires** he will always get two distinct, hot, fat, and instant sparks—that if dirt, oil or carbon clogs one point and causes it to short—the other point continues to fire.

Show Him Twin Fires—Then You'll Equip His Engine

The handy **Twin Fire** demonstration outfit enables you to prove how this plug overcomes troubles from oil and from carbon, and how it increases power.

Dealer Plan Sent to You on Request.

A WONDER LUBRICANT FOR CAR AND TRUCK SPRINGS

"Napco" Graph-Oil

Simply apply "Napco" to the sides of the springs with an oil can—

It will make springs work properly.

It will protect springs against breakage.

It will save in repair costs and replacements.

It will stop all spring noises.

It will make the vehicle ride easily.

It will save tires.

It keeps the springs from becoming rusty.

It adds to car service and comfort.

It will penetrate in between the leaves, cover and absolutely lubricate the surfaces of the leaves.

"Napco" used only on one side of a spring will come out the opposite side in from 30 seconds to three minutes without spreading.

A few drops of "Napco" will make easy starting of rusty nuts, bolts and connections, as it penetrates around the threads and loosens the rust.

With "Napco" there is no need to spread the leaves to lubricate them. It makes quick and easy work of a dirty job. Because it is easy to apply, operators and repairers will use it.

Jobbers and Dealers.

"Napco" Graph-Oil is a guaranteed product. It saves in time and labor. There is nothing like it and it is 100% efficient. It is a wonder worker, something essential in the tool kit, garage, repair and service station. It sells in a big way at a good profit to the trade.

"Napco" is sold in 16-oz. cans—List price, **75 cents.**

A special price when ordered in gallon cans or 50-gallon steel drums.

Send your order today. If demonstration is desired, write for sample can.

BLACK & DECKER

LECTROFLATER

ELECTRIC AIR COMPRESSORS

PORTABLE TANK OUTFIT

Particularly convenient for use out-doors and places at some distance from the nearest electric light socket, as the tank stores sufficient air at one filling to inflate five average tires from flat to full pressure or ten tires from 40 to 80 pounds. You take the air to the car, saving valuable time and giving your patrons the kind of service they appreciate.

The No. 2 Lectroflater Electric Air Compressor used with this outfit is a sturdy, dependable unit of unusual compactness and durability.

Air cooled. There is no water to freeze up.

Grease lubricated throughout. No oil used.

The motor develops one-half horsepower and operates on any current from Direct to 60 cycle Alternating.

Lectroflaters are made in different styles to suit various requirements.

May we send you complete information?

"Built By Cord Tire Specialists"

Only One Secret to Good Tires

WHEN it comes right down to proven facts, tire manufacturers and dealers know there is only one secret to making a good tire. *"Use only the best materials!"*

No freak or fancy construction makes so good a tire as good materials.

The best materials that the market affords are put into Syra-Cord Tires by experienced cord tire builders under the direction of cord tire specialists.

Syra-Cord Tires are made with universal tread scientifically designed to prevent skidding. Yet they coast and steer as easily as ribbed treads. With equal efficiency you can equip your whole car, front and rear, with Syra-Cord universal treads.

NEVER-LEAk

CYLINDER HEAD GASKETS

STRONGEST WHERE OTHERS ARE WEAKEST

Most car owners know from experience that a gasket that will not crack, break or blowout is better than a good gasket.

None of these defects can develop with NEVER-LEAK Gaskets. Old type gaskets may cost slightly less, but you cannot afford to gamble with car service and repair bills for a few cents.

NEVER-LEAK Gaskets are metal enclosing asbestos fabric—the only type made with seamed edges, that strengthen and reinforce it 100 per cent. Every one guaranteed. We are the world's largest gasket maker. Our standard stock includes gaskets for nearly 100 cars and trucks. We produce any type to specification.

We can fill any stock order immediately. We can make delivery to schedule.
